1. Overview

Inflationary pressures in the economy remained strong despite some easing. This was reflected in all price indices. CPI inflation dropped to 14.2 percent on YoY basis in January 2011 from 15.5 percent in December 2010 (**Figure 1.1**). Similarly, both SPI and WPI inflation also decelerated during the month under review (see **Table 1.1** and **Figure 1.2**) relative to the preceding month.

Like other measures of inflation, core inflation also decelerated. Core inflation (measured by 20% trimmed mean) fell to 12.2 percent YoY in January 2011 which is not only lower than the 13.6 percent (YoY) during December 2010, but also lower than the 12.7 percent in the corresponding month of the preceding year. Similarly, core inflation (YoY) measured by NFNE slightly eased from 9.5 percent in the preeding month to 9.4 percent in the month under review; it was 10.3 percent in the same month last year. However, ease in core inflation might be short lived, as possible upward adjustment in the prices of key fuel and increase in energy tariff would cause inflationary pressures in the economy to mount yet again.

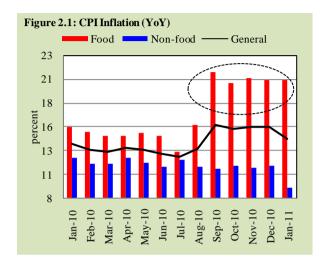

In contrast to the domestic commodity prices, international commodity prices (measured by IMF commodity prices index) continued on a rising trend (on both YoY and MoM basis) in January 2011 reaching the highest levels for the last nine months. The current rise in global commodity prices was contributed by both food as well as non-food commodities (except for energy related items, where the pressure eased) during this period. A strong rise in prices of food commodities (wheat, rice, oil, and sugar) was due to global production shortages and panic buying by the importers in anticipation of high prices. In the non-food group, a surge in crude oil prices was partly led by bullish sentiments regarding the global economic recovery and partially due to political unrest in Egypt and Tunisia.

2. Consumer Price Index

CPI inflation (YoY) dropped in January 2011 to 14.2 percent from 15.5 percent in December 2010. A sharp decline in CPI non-food inflation contributed to this decline, as food inflation remained unchanged during the period (see **Figure 2.1**).

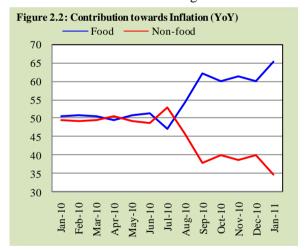

On a MoM basis, CPI inflation was 1.3 percent in January 2011 compared to a deflation of 0.5 percent in December 2010. This

reversal is entirely attributable to a sharp rise in food inflation, which rose to 2.1 percent during January 2011 relative to a deflation in the preceding month.

The impact of a decline in YoY non-food inflation and unchanged food inflation

is evident in a surge in the weighted contribution of food inflation to overall CPI inflation (see **Figure 2.2**). During the first half of 2010, both groups contributed almost equally to the overall inflation but in the second half, the contribution by the food group was more pronounced. This can be attributed to: (a) crop damages due to rains and floods; (b) supply shortages of sugar; (c) rise in

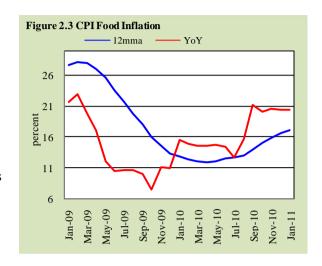

international prices of sugar, tea, and edible oils, as well as; (d) strong external demand for vegetables, meat and fruits.

2.1 Food Inflation

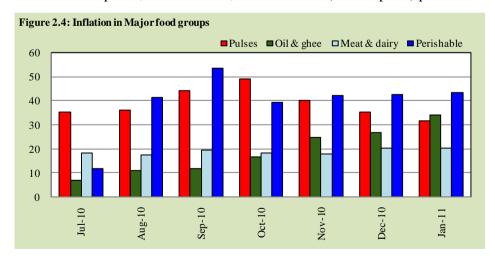

CPI food inflation remained unchanged at 20.4 percent on YoY basis during January 2011 whereas on MoM basis it registered 2.1 percent inflation against a deflation of 1.9 percent in December 2010 (see **Figure 2.3**).

Segregated analysis of food group reveals that perishable food items are still on top in inflation due to: (a) high export demand and; (b) damages to tomato crop in Sindh. In December 2010, exports of vegetables witnessed more than 200 percent MoM growth whereas fruit exports have also registered 94.1 percent MoM growth during the month (see **Figure 2.4**).

Cooking oil and ghee registered the second highest rise in the prices among food group, mainly due to a rise in international palm oil prices. Since Pakistan meets the major part of its edible oil demand from palm oil imports, therefore domestic prices of cooking oil and ghee are sensitive to movements in the international price of palm oil. In addition, a strong growth in palm oil imports has been observed during Jul-Jan FY11 with 1.05 million tons compared to 0.8 million tons imported during the same period of FY10.

The pace of increase in the prices of pulses slowed down somewhat in recent months. Flood damages increased the import requirements of mash pulse, and the country turned into a net importer mung pulse also, from a net exporter earlier. Fortunately, an improvement in the output of lentils in India resulted in a decline its international prices, and as a result, domestic lentil (masoor pulse) prices have

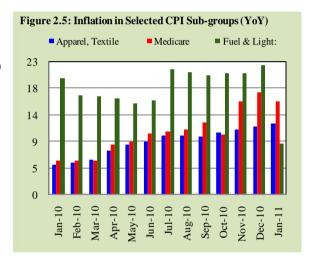

also declined in recent months.

Prices of meat & dairy products continued on a rising trend due to strong domestic and external demand. To meet the growing demand, there is a need to boost livestock farming industry in the country.

Among other food items, prices of bakery products, tea, and beverages remained strong, which may be due to high costs of inputs such as sugar and cooking oil.

2.2 CPI Non-food Inflation

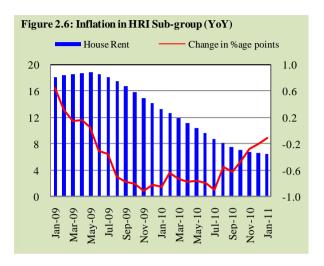

Almost after three years, CPI non-food inflation dropped to a single digit in January 2011. CPI non-food inflation was 9.0 percent YoY in January 2011, which was not only significantly lower than 11.4 percent in December 2010, but also 3.2 percentage points lower than in the corresponding month last year. In H1-FY11, CPI non-food inflation moved in a narrow range, converging to the 12-month moving average

(12mma). This shows resilience in non-food inflation (see **Figure 2.5**). However, in Jan 2011, CPI non-food inflation (YoY) diverged from the 12mma, but this seems a temporary phenomenon. It is expected that the government will increase POL prices due to surge in global POL prices.

In CPI non-food group, four sub-groups out of nine, having 22.9 percent share in the group, registered rising inflation on YoY basis in January 2011, while the remaining five sub-groups (having 77.1 percent weight in CPI non-food group) registered decline in inflation. The highest ease was recorded in fuel & lighting sub-group (see **Figure 2.5**), which dropped by 13.7 percentage points in January 2011 compared to December 2010, mainly due to a high-base effect.

House rent inflation dropped to 6.6 percent in January 2011 from 6.7 percent in December 2010. However, it is likely that declining trend in HRI will reverse months ahead due to rising building material prices in the international and domestic markets. An acceleration in HRI inflation would strongly impact the CPI non-food inflation as it has 39.3 percent weight in the non-food basket (see **Figure 2.6**).

2.3 Income Group-wise Inflation

Income group-wise inflation data shows that the lowest income group experienced highest inflation during January 2011, whereas the highest income group observed the lowest inflation in the month under review (see **Table 2.2**).

Table 2.2: Income	Table 2.2: Income Group-wise Inflation (YoY)											
		General			Food		I	Non-food				
	Nov-10	Dec-10	Jan-11	Nov-10	Dec-10	Jan-11	Nov-10	Dec-10	Jan-11			
Up to Rs. 3000	17.4	16.9	16.1	22.2	21.2	20.9	11.0	11.4	10.0			
Rs. 3001-5000	17.0	16.6	15.7	21.7	20.9	20.6	11.1	11.5	9.7			
Rs. 5000-12000	16.1	16.0	14.8	20.8	20.4	20.4	11.2	11.4	9.1			
Above Rs. 12000	14.5	14.7	13.3	19.6	20.0	20.3	11.3	11.5	8.9			
All income groups	15.5	15.5	14.2	20.5	20.4	20.4	11.1	11.4	9.0			

2.4 City-wise Inflation

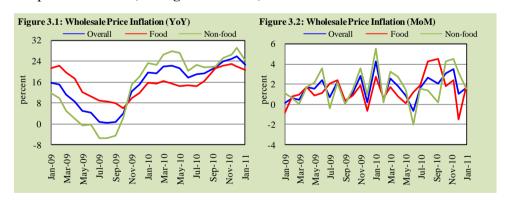

Fewer numbers of cities had above average inflation in the month of January 2011 relative to the preceding month. Of 35 cities, 22 had above 14.2 percent inflation (average inflation) in the month under review compared to 24 cities recording higher than the average inflation (15.5 percent) in December 2010 (see **Table 2.3**).

Table 2.3: City	Table 2.3: City-wise Inflation of Selected Cities										
	Jan	-10	De c-	10	Jar	ı-11					
	MoM YoY		MoM	YoY	MoM	YoY					
Over all CPI	2.4	13.7	-0.5	15.5	1.3	14.2					
Islamabad	2.4	12.1	-0.5	12.4	1.3	10.6					
Lahore	2.4	13.4	0.1	13.3	0.8	11.4					
Karachi	3.0	13.0	-1.0	14.0	1.2	12.6					
Quetta	2.0	10.6	-0.7	17.6	0.7	15.7					
Peshawar	2.4	12.9	0.9	16.5	0.8	13.9					

Highest overall inflation was recorded in Khuzdar in January 2011 on the back of highest food inflation, while lowest inflation was witnessed in Islamabad (which also had the lowest non-food inflation) during the month. Highest food inflation was recorded in Khuzdar and lowest food inflation was recorded in Sialkot. The highest non-food inflation was registered in Bahawalnagar and lowest non-food inflation in Islamabad during the month under review.

3. Wholesale Price Index

WPI inflation (YoY) eased during January 2011 compared to the previous month. Both food and non-food groups contributed to this decline. However, in contrast with CPI basket, a decline in WPI inflation was mainly driven by higher non-food inflation. WPI registered an increase of 22.6 percent during the period under review compared to 25.7 percent rise in the previous month. Recent ease in WPI non-food inflation is principally attributed to slowdown in the pace of rise in the prices of fuel, lightening, and lubricant relative to the same period a year earlier and previous month (see **Figure 3.1& 3.2**).

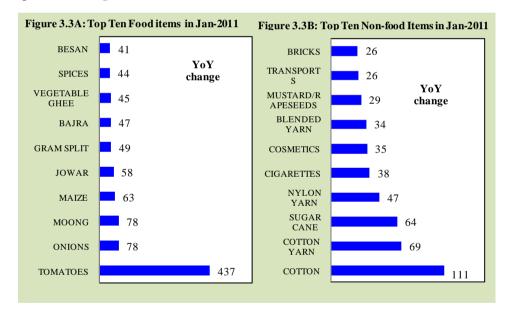

In contrast, WPI inflation on a MoM basis rose to 1.6 percent during January 2011compared with 1.1 percent in December 2010. Major contribution to WPI inflation (MoM) came from food component. Food inflation posted an increase of 1.7 percent compared to 1.5 percent deflation in the previous month. However,

WPI non-food inflation eased to 1.6 percent (MoM) during January 2011 as against increase of 3.1 percent in December 2010.

Food Group

WPI food inflation was 20.6 percent YoY during January 2011 compared to 21.7 in December 2010. Within 43 food items in the WPI basket, 29 items recorded double digit increase during the month whereas only 4 items registered a decline.

WPI food inflation slightly declined during January 2011, relative to the preceding month, due to some deceleration in the prices of perishable food items. In particular, prices of onions dropped close to the levels of Jan 2010 following the imposition of a ban on its export. Similarly, improvement in supply of sugar and some other commodities helped slow down the pace of increase in their prices (see **Figure 3.3**).

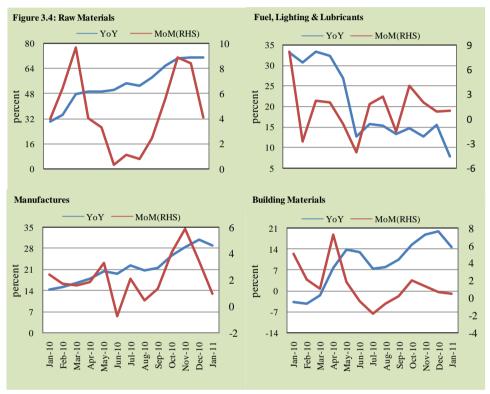

Non Food Group

WPI non-food inflation was 24.2 (YoY) during January 2011compared to 28.9 percent in December 2010. This ease came largely due to weaker pace of rise in the prices in fuel & lighting sub-group. Prices of all items under this group remained unchanged or rose by a slower rate during Jan 2011, except prices of fire wood.

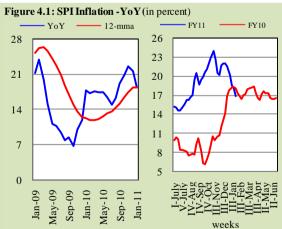

Within the sub-indices of WPI non-food group, all sub-indices (except raw material) witnessed moderation in inflation during January 2011. Raw materials

sub-group registered the highest increase (YoY) in WPI non-food category. A strong rise of 71.1 percent YoY in Jan 2011 in raw materials sub-index is mainly attributed to surge in the prices of cotton, cotton seeds, and sugar. A sharp rise in cotton prices is attributed to domestic shortages as well as rising supply-demand gap of cotton in international market.

4. Sensitive Price Indicator (SPI)

Inflation measured by
Sensitive Price Indicator (SPI)
also witnessed ease during the
month under review. SPI
dropped to 18.4 percent YoY
during January 2011, from
21.5 percent in the previous
month (see **Figure 4.1**).
Weakening of SPI inflation is
largely attributed to
improvement in supply of

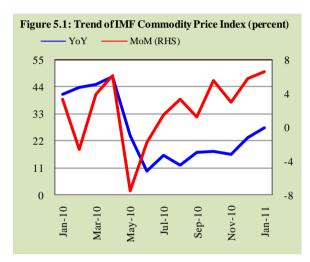

perishable food commodities

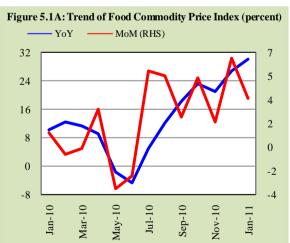

On MoM basis, SPI recorded an increase of 0.6 percent during the month of January 2011 compared to 0.5 percent deflation in the preceding month. Moreover, weekly SPI inflation (WoW) declined consectively for the last three weeks of January 2011, whereas it increased during the first week of January 2011. The decline in the last three weeks was contributed by improved supply of perishable items such as onions, potatoes, and garlic on the back of arrival of new crops. The rise in the first week of January 2011 was mainly due to increase in POL products prices, withdrawn by government after a week.

5. Global Commodity Prices

International commodity prices continued on a rising trend in January 2011, reaching the highest levels for the last nine months. IMF commodity prices index rose by 27.6 percent (YoY) in January 2011, which is 3.9 percentage points higher than the pervious month's increase. Similarly, global commodity prices also rose on MoM basis in the same period. The current rise in global commodity prices was contributed by both food and non-food commodities (except for energy related items, where the pressure eased) during this period (see Figure **5.1**).

Strong rise in prices of food commodities including wheat, rice, oil, and sugar was due to global production shortages and panic buying by the importers in anticipation of high prices. Among non-food group, surge in crude oil

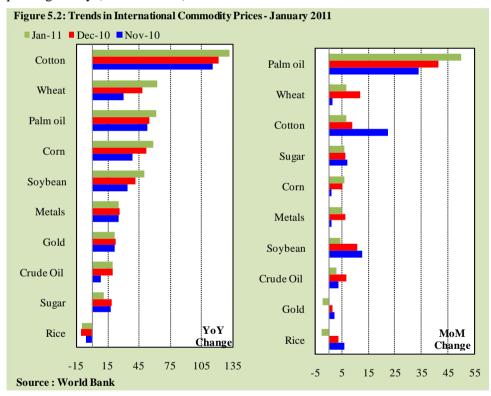

prices was led by bullish sentiments regarding economic recovery and partially due to political unrest in Egypt and Tunisia. Strong demand was the driving factor behind cotton and metal price hikes during January 2011. Precious metals' prices declined, as these were less attractive for the investor during this period despite weakness of the US dollar.

Food Group

Food inflation measured by IMF food commodity prices index (includes cereals, vegetable oil, meat, seafood, sugar, bananas and oranges prices indices) rose by 3.2 percentage points to 30.0 (YoY) percent during January 2011 compared with 10.2 percent increased in the same month last year (see **Figure 5.1A**). This increase came mainly on account of a strong surge in grains, sugar and oil seeds prices globally (see **Table 5.2**).

Among grains, wheat and corn prices reached two- year highs. Unfavorable weather in Australia and reports of lower than estimated winter wheat planting in the US created concerns in the market regarding the wheat outlook. Following these reports, many import-dependant countries such as Algeria, Indonesia, Saudi Arabia and Bangladesh started buying the commodity in an effort to hedge

against rising prices and to assure food security. These heavy purchases drove wheat prices to their highest level since August 2008. Similarly, a drop in US official corn inventories and concerns regarding the upcoming harvest in Argentina pushed corn prices to two- year highs in January 2011.

A strong growth was observed in edible oil, soybean, and palm oil prices from the start of FY11. Palm oil prices recorded a gain of 66.9 percent on YoY basis in the month under review—highest rise since May 2008. Strong demand from China and India was the major driving factor of the prices. In addition to that, lower supply estimates from US, as dry weather threatens soybean crops in Argentina (the top exporter in the world) and heavy rain in Indonesia supplemented the market nervousness.

Sugar prices rose to 30- year high of US cents 32.09 per pound in January 2011 due to strong demand and declining stock-to-use ratio. Bullish trend in sugar prices can be attributed to; (a) flooding in Australia, the world's third largest sugar exporter, that caused an estimated 21 percent drop in sugarcane output; (b) concerns regarding delay in Indian exports; (c) expectation of a rise in European import quota, anticipation of decline in sugarcane output due to freezing weather in Guangxi, China-biggest growing region, and, (d) forecast of high strong sugar imports by Russia, it will be the world's largest importer this year according to USDA.

Non-food group

Non-food commodities, in general, registered strong growth in prices during January 2011. Strong demand from emerging economies and moderate level recovery in advance economies are pushing the commodity prices higher. Some temporary factors like political unrest in Egypt and Tunisia also created panic in

the commodity markets.

Within the non-food group, a continuous rising trend was witnessed in the metals subgroup during January 2011. Metal commodity prices index increased by 57.6 percent on YoY basis in the month under review; 28.0 percentage points higher than in the last month (see **Figure 5.3**). Industrial metal prices rose during January 2011

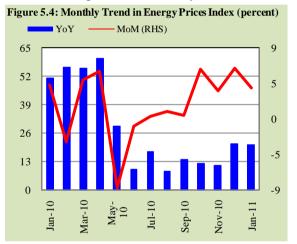

mainly due to strong demand from China, the largest metal user in the world. Copper prices reached to the highest ever level of US\$ 9555.7 per ton with 29.4 percent rise in January 2011 on top of 31.2 percent growth in previous month. Similarly, tin prices reached the highest US\$ 2746.5 per ton while, aluminum and lead prices touched the two- year high level of US\$ 27439.5 per ton in January with 54.9 percent increase compared with 53.2 percent climb in the corresponding month of preceding year.

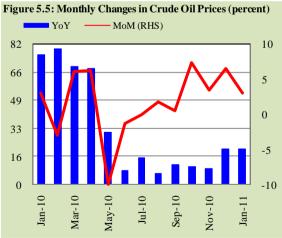

Gold prices declined during the review month by more than US\$ 34 to 1356.4 from US\$ 1390.6 per troy ounce in December 2010. Gold prices dropped due to tumbling investor confidence with global economic recovery reports. Gold is considered as a safe haven against economic or political instability, so with

economic recovery getting momentum, gold is losing its worth. However, due to problems still existing in Euro Zones, gold prices may decline gradually.

The prices pressure of energy related items measured by commodity fuel (energy) index (includes Crude oil, Natural Gas, and Coal Price Indices) slightly eased during the month under review. Fuel index rose by 20.6 percent in January 2011, which is not only lower than 21.1 percent increase in the last month but also much lower than 51.3 percent growth in the same month last year (see Figure **5.4**). This monthly easing is attributed to weaker increase in coal and natural gas prices.

Crude oil prices (simple average of three spot prices; Dated Brent, West Texas Intermediate and Dubai Fateh)

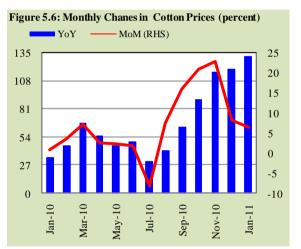

in January 2011 raised to US\$ 92.7 per barrel; the highest level since September

2008 (see **Figure 5.5**). The growth in crude oil prices remained strong at 20.6 percent on YoY basis in January 2011. Optimism about the global economic recovery and higher oil demand expectations supported the oil market in January 2011. In addition to this, political unrest in Egypt raised concern about the crude oil supply through Suez Canal, pushing further pressures on crude oil prices. Apart from this factor supply side appear to be good as OPEC production in January 2011 increased by 400 tb/d whereas, non-OPEC supply increased by 1.1 mb/d. On the basis of OPEC development, we can expect some downward correction in crude oil prices in the next month.

Cotton prices continued to increase during January 2011 and reached US\$ 1.79 per pound; 131.2 percent higher than the prices of cotton in the corresponding

month of preceding year (See **Figure 5.6**). This significant rise was mainly due to strong demand on the back of 86 percent increase in Chinese imports and less cotton production globally, indicating a tight supply in the year 2011. Earlier, flooding in Australia, draught in Tanzania and adverse weather condition in China and some other countries partially due to La Nina, lowered crop output in 2010 and put upward pressure

on cotton prices. In January 2011, United States Department of Agriculture lowered its estimates for global stockpiles to 558,000 bales explaining 73,000 bales reduction in global production and a 333,000 bales increase in estimated consumption.

_

¹ Suez Canal carries about 2.4 million barrels daily, roughly equal to Iraq's output.

Table A13: International Commodity Prices/Indices						
	Nov-10	Dec-10	Jan-11			
Energy						
Crude Oil (US\$ per barrel)*	84.6	90.1	92.7			
IMF Energy Index (2005 = 100)	156.4	166.4	173.0			
WB Energy Index (1990=100) @	287.8	307.3	320.4			
Food	0.0	0.0	0.0			
Rice (\$/MT)	543.1	536.8	527.5			
Wheat (\$/MT)	274.4	307.0	326.5			
Sugar (US cent / pound)	28.9	31.1	32.1			
Palm Oil (\$/MT)	1,059.0	1,171.2	1,238.6			
Soybean Oil (\$/MT)	1,123.3	1,208.4	1,257.1			
Non-Food Non-Energy						
Cotton Outlook 'A' Index #	155.5	168.2	178.9			
IMF Metal Price Index (2005=100)	186.3	193.7	243.8			
Copper (\$/MT)	8,458.4	9,152.9	9,533.2			
Aluminum (\$/MT)	2,324.1	2,356.7	2,439.7			
Iron Ore (\$ cents/dry MT)	182.0	182.0	179.6			
Tin (\$/MT)	25,403.1	26,103.9	27,439.4			
Nickel (\$/MT)	22,836.2	24,099.6	25,621.2			
Zinc (\$/MT)	2,283.3	2,287.3	2,375.8			
Lead (\$/MT)	2,365.0	2,413.2	2,584.0			
Uranium (\$/pound)	57.2	60.7	63.9			
DAP (\$/MT)	423.8	468.9	533.2			
Urea (\$/MT)	340.6	354.0	367.5			

^{\$/}MT = US\$ per metric tonne.

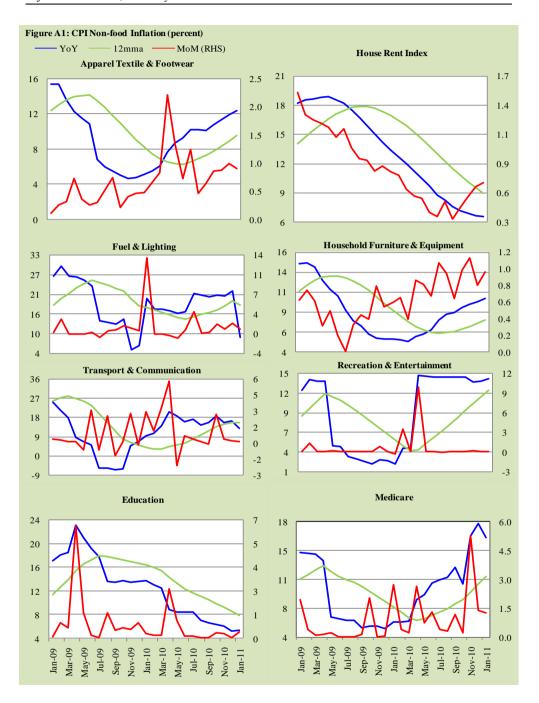

^{*} Crude Oil (petroleum), simple average of three spot prices; Dated Brent, West Texas Intermediate, and the Dubai Fateh

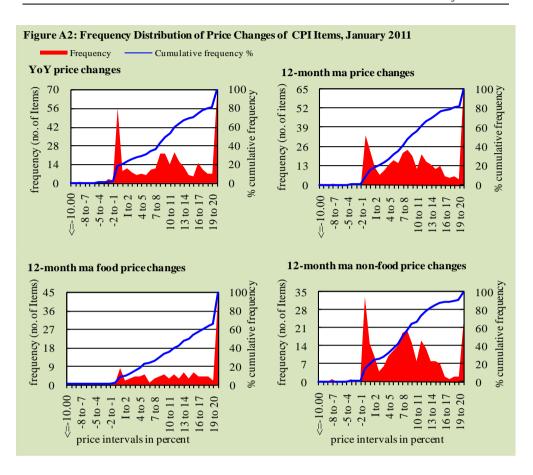

[#] Middling 1-3/32 inch staple, Liverpool Index "A", average of the cheapest Cts/lb five of fourteen styles, CIF Liverpool (Cotton Outlook, Liverpool). From January 1968 to May 1981 strict middling 1-1/16 inch staple. Prior to 1968, Mexican 1-1/16. 2/

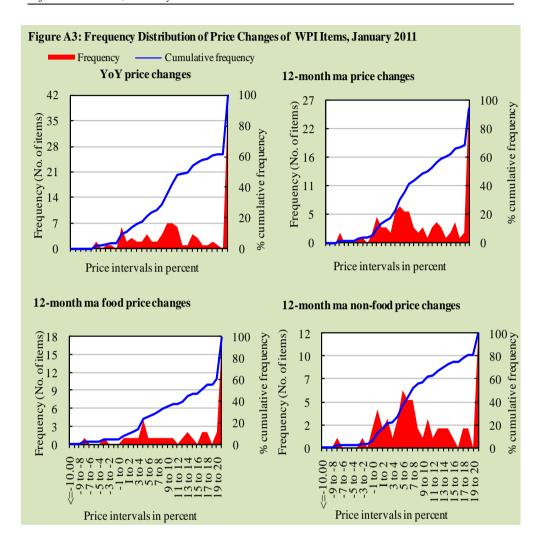

DAP: Diammonium Phosphate

[@] World bank commodity index for low and middle income countries

Annexure B

Technical Notes

1. All the three measures of inflation, viz. CPI, WPI and SPI are computed by the following Laspeyres Index formula:

$$I_t = \sum_j w_0^j \left(\frac{P_t^j}{P_0^j} \right)$$

Where I_t is price index, w_0^j is weight of commodity j in the overall basket, P_t^j is price of commodity j in period t and P_0^j is its price in the base year.

- 2. Base year for all the indices is the year 2000-01.
- 3. CPI basket contains 374 consumers' goods; WPI basket contains 425 commodities; SPI contains 53 commodities.
- 4. YoY inflation is the percent change of an index in a given month over the index in the same month of the last year. It is computed as follows:

$$\pi_t = (\frac{I_t}{I_{t-12}} - 1) \times 100$$

5. Period average inflation is the percent change of the average index during the period from July to the given month of a fiscal year over the average index during the corresponding period of the last year. It is computed as follows:

$$\overline{\pi}_{t} = \left(\frac{\sum_{i=0}^{t-v} I_{t-i}}{\sum_{i=0}^{t-12-v} I_{t-12-i}} - 1\right) \times 100$$

Where v is the serial number of the month of July of current fiscal year in a given time series.

6. Monthly inflation is the percent change of an index in a given month over the index in the preceding month. It is computed as follows:

$$\pi_{t} = (\frac{I_{t}}{I_{t-1}} - 1) \times 100$$

7. 12-month moving average inflation (Long-run trend inflation) is the percent change of 12-month moving average of a price index; it is computed as follows:

$$\widetilde{\pi}_{t} = \left(\frac{\sum_{i=0}^{11} I_{t-i}}{\sum_{i=0}^{11} I_{t-12-i}} - 1\right) \times 100$$

- 8. Core Inflation is defined as the persistent component of measured inflation that excludes volatile and controlled prices. It reflects the normal supply and demand conditions in the economy. Core inflation is computed by the following two methods:
 - a) Non-food, Non-energy inflation (NFNE inflation); it is computed by excluding food group and energy items (kerosene oil, petrol, diesel, CNG, electricity and natural gas) from the CPI basket.
 - b) 20% trimmed-mean inflation; it is computed through the following steps:
 - i. All CPI items are arranged in ascending order according to YoY/12-month moving average/monthly/period average changes in their price indices in a given month.
 - ii. 20 percent of the items showing extreme changes are excluded with 10 percent of the items at the top of the list (corresponding to cumulative weight of 90% or more) and 10 percent of the items at the bottom of the list (corresponding to cumulative weight of 10 percent or less).
 - iii. The weighted mean of the changes in price indices of the rest of the items is core inflation.
- 9. Weighted contribution of different items (or sub-groups) to total inflation is worked out as below:

Let the overall index (I_t) is the weighted average of price indexes of individual items or sub-groups (I_{it}) , i.e.

$$I_{t} = \sum_{i} w_{i} \cdot I_{it}$$

The weighted contribution of a single item (or a sub-group) to overall inflation is defined as below:

$$C_{it} = \alpha_{it-12} \cdot w_i \cdot \left(\frac{\pi_{it}}{\pi_t}\right)$$

Where C_{ii} : Contribution of ith item to the overall inflation

 $\alpha_{it-12} = \frac{I_{it-12}}{I_{t-12}}$; i.e. ratio of item's index to overall index in

the reference month

 W_i : Weights of ith item

 π_{it} : Inflation of ith item

 π_{t} : Overall inflation
