## **Review**

### **Inflation in Brief**

1. Headline CPI inflation (2007-08=100) is recorded at 3.2 percent on year-on-year basis in May 2015 as compared to 2.1 percent in the previous month and 8.3 percent in the corresponding month of last year.
2. CPI inflation on month-on-month basis is recorded at 0.8 percent in May 2015 as compared to 1.3 percent in the previous month and -0.3 percent during the corresponding month of last year. Seasonally adjusted month-on-month CPI inflation is recorded at 1.1 percent in May 2015 compared to 0.5 percent in the previous month.
3. Core inflation (trimmed) on year-on-year basis increased to 3.9 percent in May 2015 as compared to 3.1 percent in the previous month and 8.3 percent during the corresponding month of last year.
4. On month-on-month basis, the Core inflation (trimmed) recorded at 0.1 percent in May 2015 as compared to 0.6 percent in the previous and 0.3 percent in the corresponding month of last year.
5. Non-food, non-energy inflation measured by CPI Core (NFNE) on year-on-year basis decreased to 4.9 percent in May 2015 as compared to 5.4 percent in the previous month. It was 8.7 percent in the corresponding month of last year.
6. Core NFNE inflation on month-on-month basis showed slight increase in May 2015 as compared to 1.4 percent in the previous month. A 0.5 percent increase in Core NFNE index was observed in May 2014.
7. WPI inflation on year-on-year basis increased to -1.8 percent in May 2015 when compared to -2.9 percent a month earlier. During May 2014, WPI inflation was recorded at 7.3%.

8. WPI inflation on month-on-month basis recorded at 1.1 percent in May 2015 as compared to 0.9 percent in the previous and -0.1 percent in the corresponding month of last year.
9. SPI inflation on year-on-year basis increased to 0.8 percent in May 2015 as compared to -1.6 percent in the previous month. It was 9.3 percent in the corresponding month of last year.
10. SPI inflation on month-on-month basis recorded at 1.5 percent in May 2015 as compared to 0.7 percent in the previous and -0.9 percent in the corresponding month of last year.

### **1.1 A New Measure of Core Inflation**

A new method of permanently excluding relatively volatile commodities from CPI basket in Pakistan has been developed by SBP. This is achieved by making use of trimming approach on past data on monthly CPI changes to isolate a Relatively Stable Component of CPI (RSC-CPI) as a new measure of core inflation. This method ensures inclusion of both food and non-food commodities that show persistent price behavior in Pakistan (see technical notes for details). Developments in core inflation measured by RSC- CPI for the month of May 2015 are described below:

- Core inflation based on new measure RSC on year-on-year basis is recorded at 5.1 percent in May 2015 compared to 5.6 percent in the previous month and 8.8 percent in the corresponding month of last year.
- Core RSC inflation on month-on-month basis is recorded at 0.2 percent in May 2015 compared to 1.1 percent in the previous month and 0.6 percent in the corresponding month of last year.

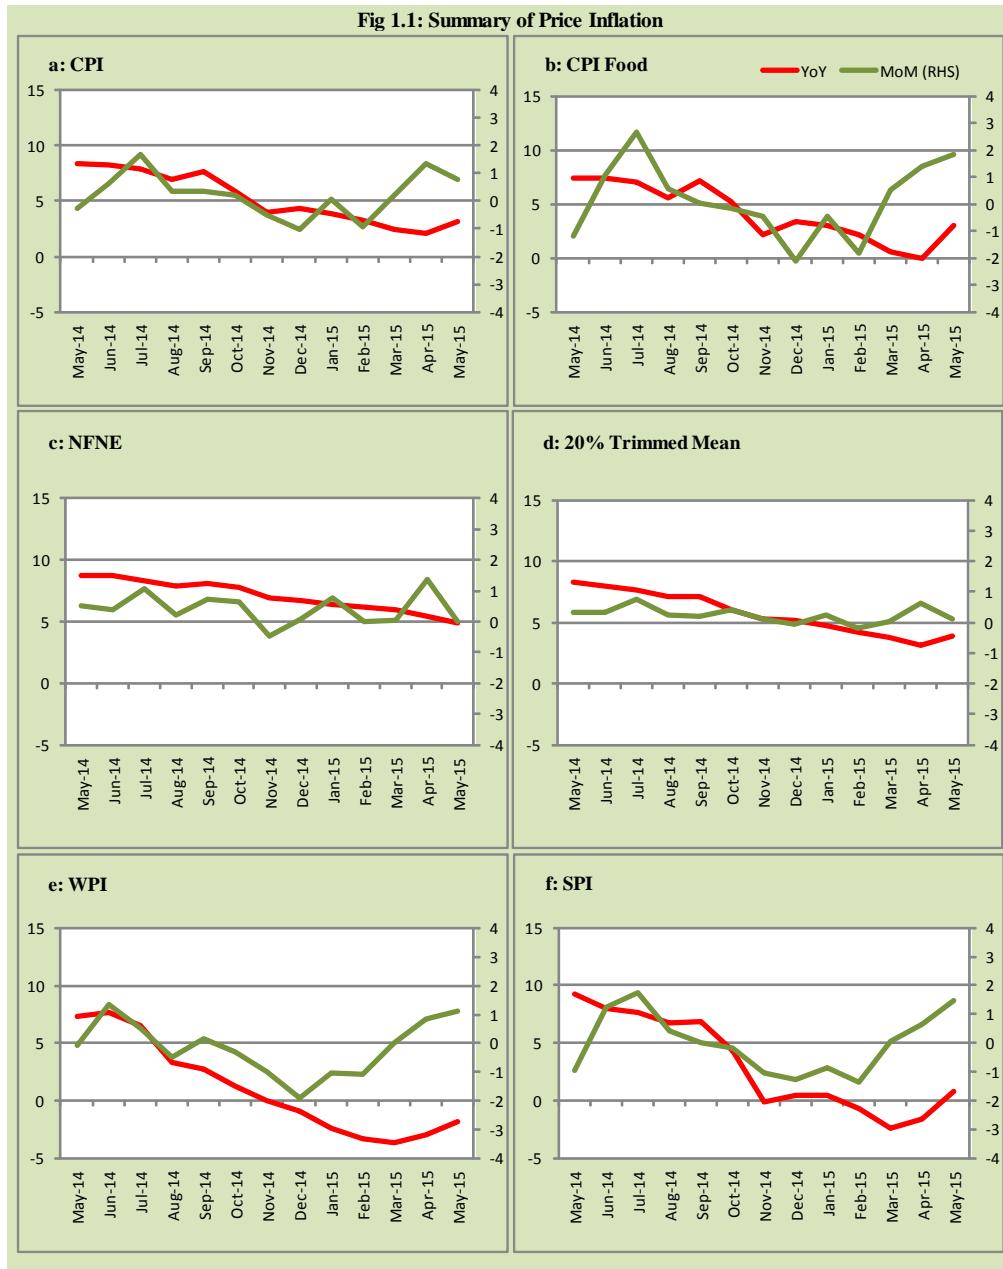

Monthly CPI, WPI and SPI data is summarized in the following table.

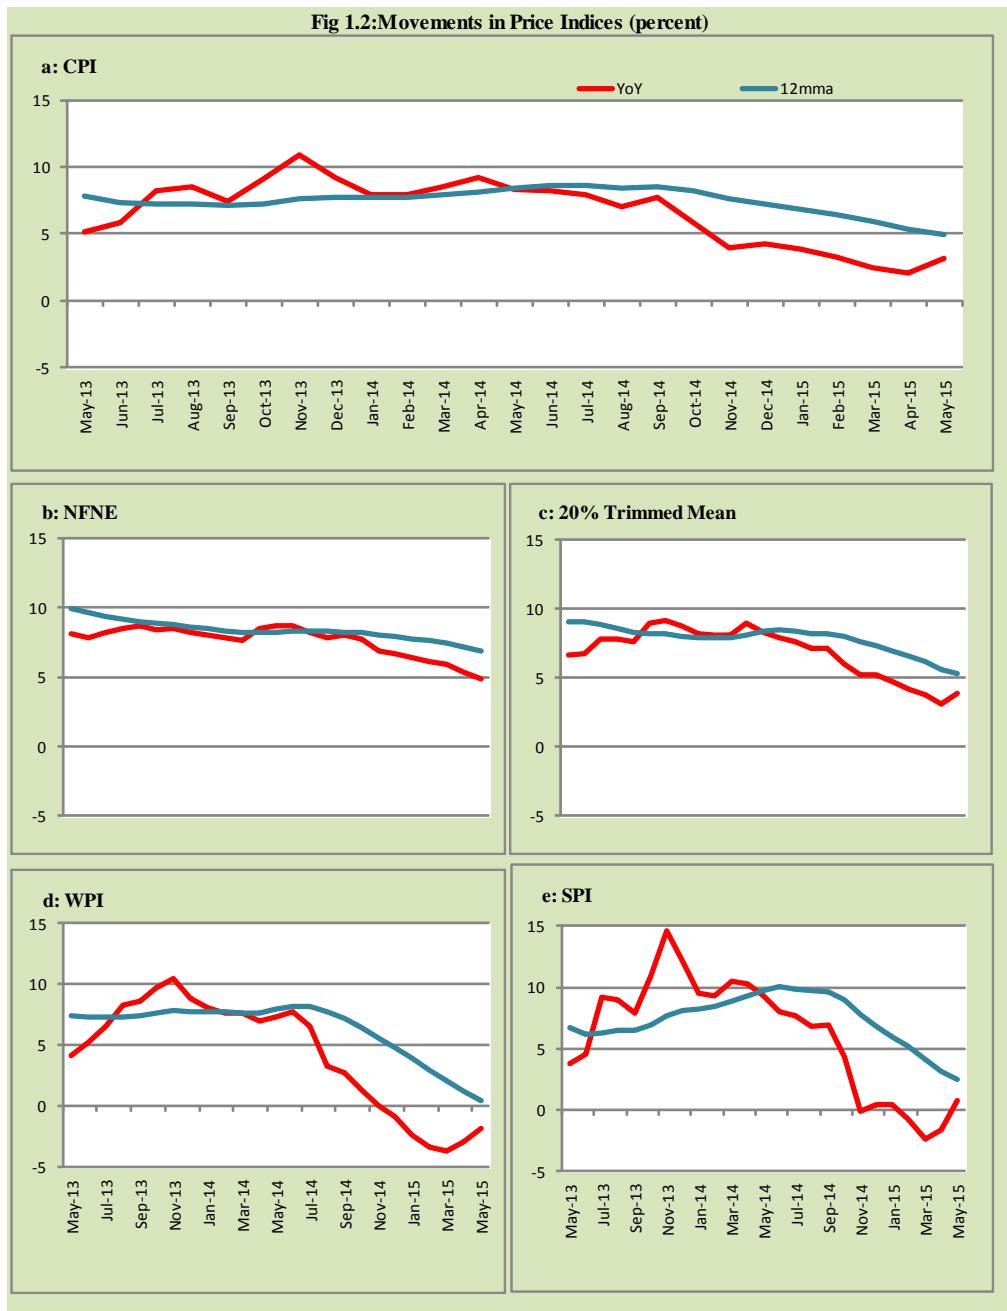

Period	Table 1.1 Inflation Trends (percent) (Base 2007- 08 = 100)															
	CPI Inflation						Core Inflation						WPI Inflation	SPI*** Inflation

## 2. City wise Inflation

CPI Inflation on year-on-year basis in federal and provincial capitals of Pakistan was higher than the overall inflation during May 2015 except Quetta which is 1.8 percent. Among these five cities, the highest inflation was observed in Islamabad at 4.7 percent (Table A6 of annexure-A).

**Table 2.1 City-wise Inflation of Selected Cities (percent)**

	May-14		Apr-15		May-15	
	MoM	YoY	MoM	YoY	MoM	YoY
<b>Overall CPI</b>	-0.3	8.3	1.3	2.1	0.8	3.2
Islamabad	-0.1	14.2	1.1	4.0	0.6	4.7
Karachi	0.0	8.9	1.1	3.5	0.6	4.1

Quetta	-0.8	7.1	1.2	-0.1	1.2	1.8

### 3. Income Group wise Inflation

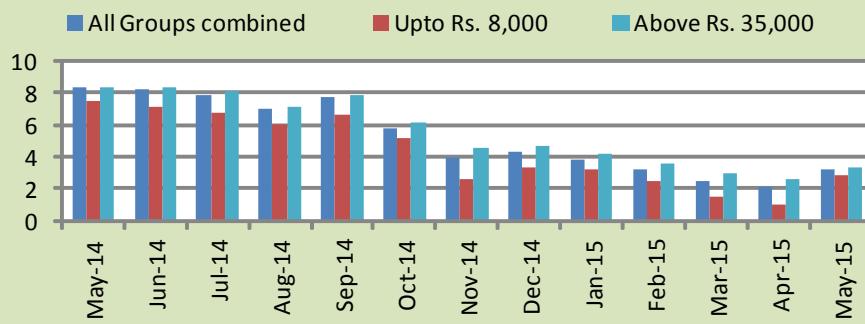

Income group- wise data showed that income group above Rs. 35,000 witnessed higher inflation than the overall inflation in CPI basket during May 2015 except in non-food group. The lowest income group (Up to Rs. 8,000) has the lowest inflation in general and food groups and highest inflation in non-food group among the income groups during the month of May 2015 (Table A7 of annexure-A).

**Table 3.1 Income Group- wise Inflation (YoY)**

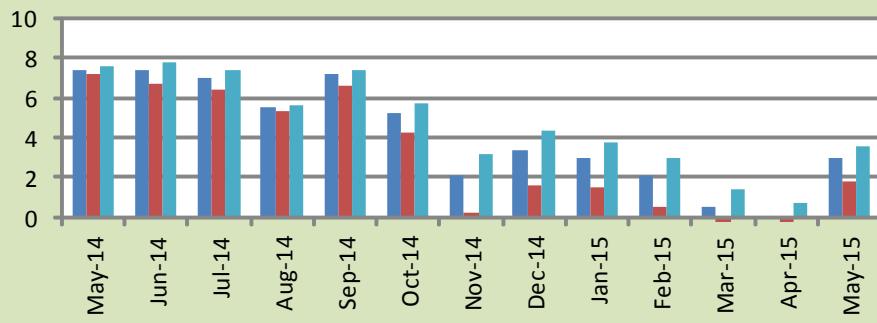

Income Groups	General			Food			Non-food		
	May-14	Apr-15	May-15	May-14	Apr-15	May-15	May-14	Apr-15	May-15
<b>All Groups Combined</b>	8.3	2.1	3.2	7.4	0.0	3.0	9.0	3.7	3.3
Up to Rs. 8,000	7.5	1.0	2.8	7.1	-1.6	1.8	8.0	4.4	4.0
Rs. 8,001- 12,000	7.5	1.3	2.9	7.2	-1.1	2.2	7.7	4.0	3.6
Rs. 12,001- 18,000	8.6	1.7	3.0	7.3	-0.5	2.6	9.9	3.9	3.5
Rs. 18,001- 35,000	8.7	1.8	3.0	7.4	0.0	3.1	9.9	3.4	3.0

**c: CPI Non-Food Inflation (YoY)**

#### **4. Weighted Contribution**

The weighted contribution of food group in the overall inflation increased to 39.65 percent during May 2015 from -0.64 percent in April 2015. It was 37.10 percent in May 2014.

The weighted contribution of non-food group decreased to 60.35 percent in May 2015 from 100.64 percent in April 2015.

**Table 4.1 Weighted Contribution to CPI Inflation (YoY)**

<b>Period</b>	<b>Food</b>	<b>Clothing &amp; Footwear</b>	<b>Housing, Water, Elect, Gas &amp; Other Fuel</b>	<b>Transport</b>	<b>Education</b>	<b>Others</b>

## **8. Seasonal Adjustment in CPI**

Seasonal adjustment is the process of estimating and removing the seasonal effects from a time series after decomposing it into seasonal, trend, cycle and irregular components. The purpose is to identify the different components of the time series and thus provide a better understanding of its underlying behavior. Seasonally adjusted changes are usually preferred for analyzing general price trends in the economy because they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year. Various statistical methods can be used to decompose a time series into its constituent components. The State Bank of Pakistan uses X-12- ARIMA Seasonal Adjustment Method for this purpose.

The changes in consumer prices are normally reported in terms of year-on-year and month-on-month basis. Seasonal adjustment is particularly useful for analyzing month-on-month changes. The monthly data series of Consumer Price Index (CPI) from July 2008 to May 2015 has been used for seasonal adjustment analysis. The seasonal analysis is carried out without taking trading-day or Islamic calendar month's effects.

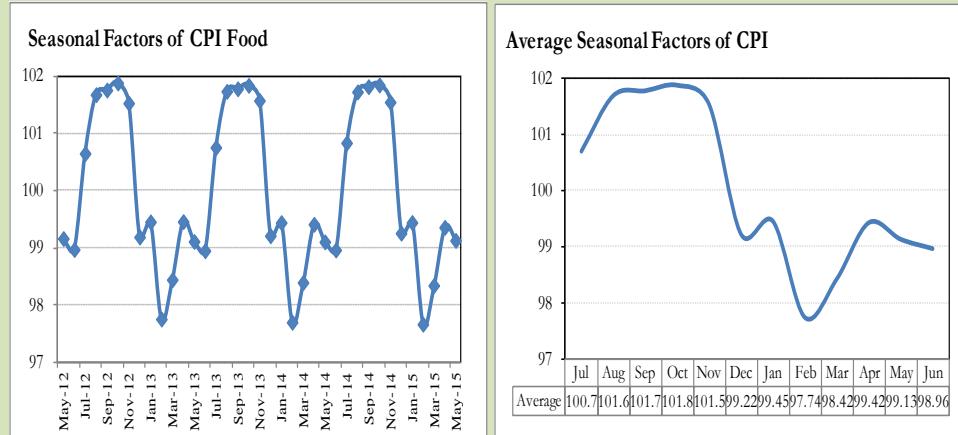

Figure 8.1 reveals that seasonality in CPI has been increasing over the period of last four years. Average seasonal factors reveal strong seasonality during the calendar year. There is an upward seasonality during the months from July to November & April and downward seasonality in the remaining months of the year. Upward and downward seasonality is above and below the trend line respectively. It is important to note that seasonal factors are estimates based on present and past experience and that future data may not necessarily show the same pattern of seasonal factors.

**Fig. 8.1 Seasonal Factors of CPI**

Note: Data Available in Annex Table 16.

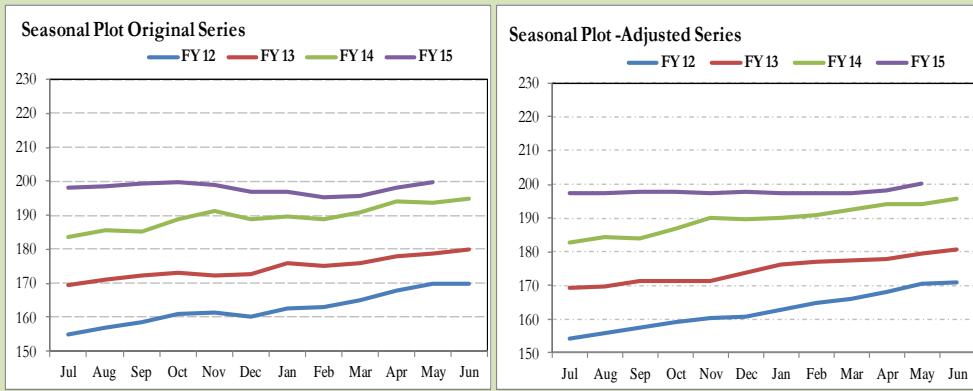

**Fig. 8.2 Seasonal Factors of CPI Food**

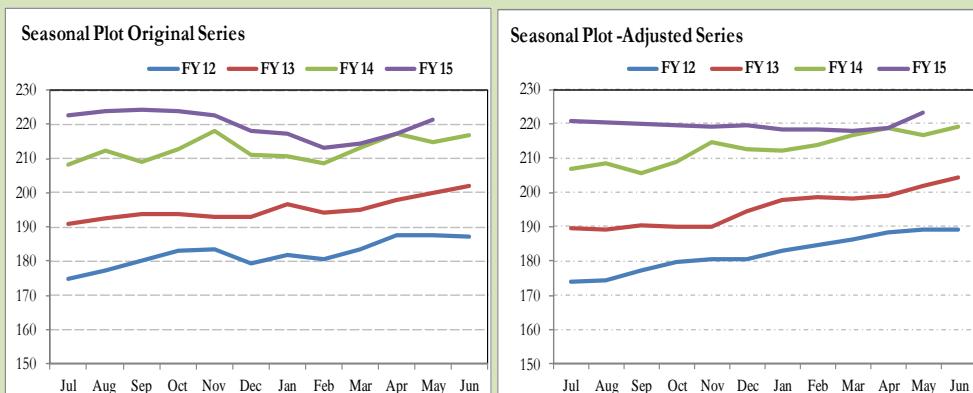

Note: Data Available in Annex Table 17.

Figures 8.3 & 8.4 show that seasonally adjusted series are relatively smoother than the original series due to the removal of the seasonal variations. The trend follows the long-term movement in original series, and is smoother than the original series because some irregular fluctuations have been removed.

**Fig. 8.3 Seasonal Plots of CPI**

**Fig. 8.4 Seasonal Plots of CPI (Food)**

## Inflation Monitor, May 2015

Seasonally adjusted CPI for May 2015 stood at 200.42 against 199.66 in original series showing an increase of 0.76 on account of adjustment of downward seasonality in May 2015.

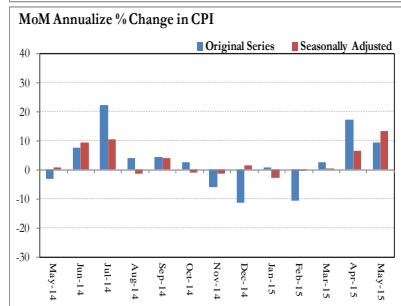

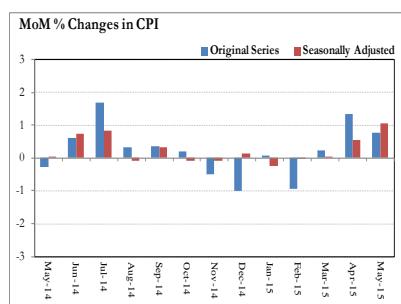

Seasonally adjusted CPI food group for May 2015 stood at 223.16 against 221.22 in original series showing an increase of 1.94 on account of adjustment of downward seasonality in May 2015.

Month-on-month change of seasonally adjusted CPI series stood at 1.06% reflecting increase during May 2015 over April 2015 and an increase of 0.76% in original series.

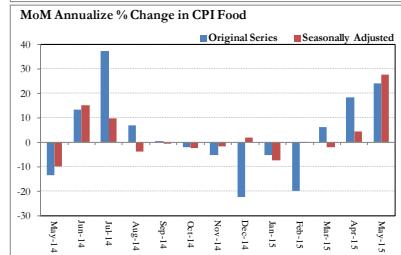

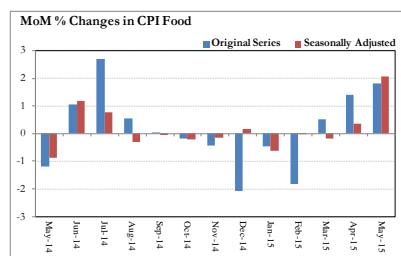

Month-on-month change of seasonally adjusted CPI food group series stood at 2.06% reflecting increase during May 2015 over April 2015 and an increase of 1.82% in original series.

It is important to note that inflation rates should be analyzed on the basis of seasonally adjusted rates. This is especially needed for inflation rates on month-on-month basis. The most recent annual rate of inflation is usually indicated by annualizing the seasonally adjusted month-on-month rate. Annualized rate of CPI inflation in May 2015 (corresponding to the seasonally adjusted month-on-month rate) is 13.46 percent.

**Fig. 8.5 Month-on-Month Percent Changes in CPI**

**Fig. 8.6 Month-on-Month Percent Changes in CPI Food**

## Annexure A

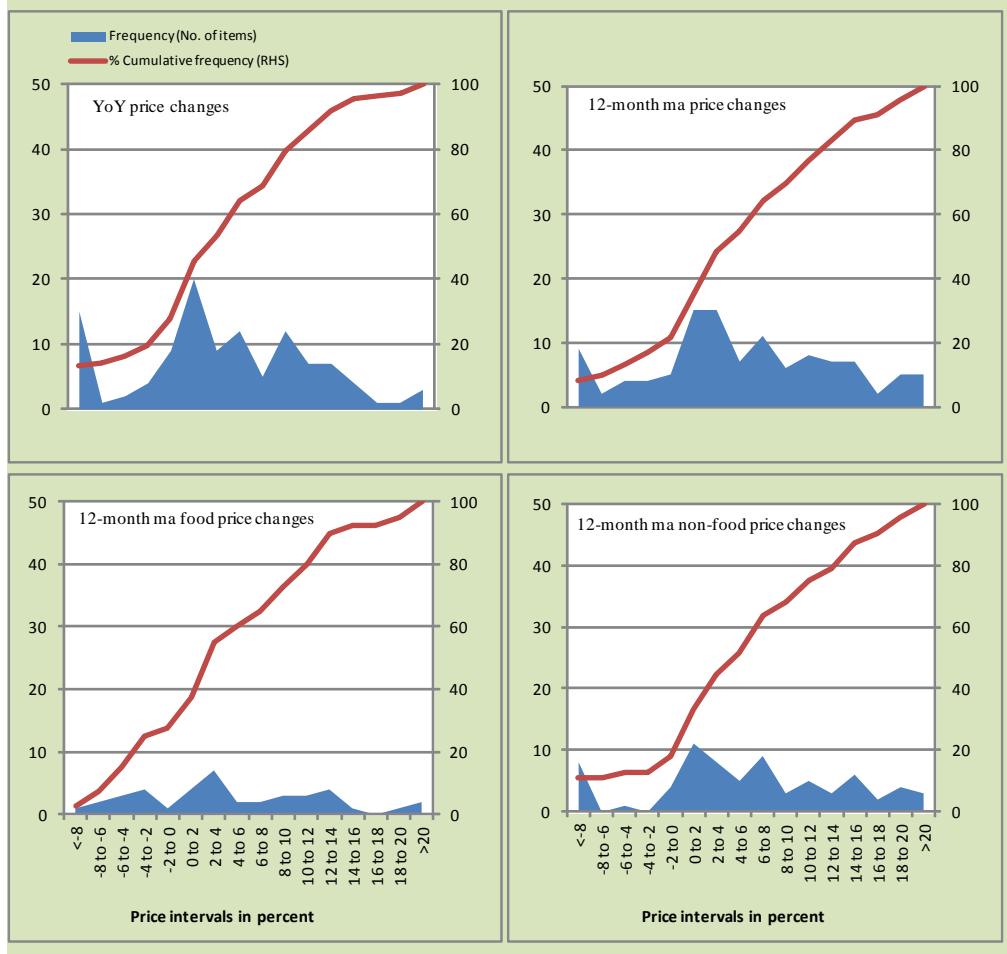

**Figure A2: Frequency Distribution of Price Changes of CPI Items, May 2015**

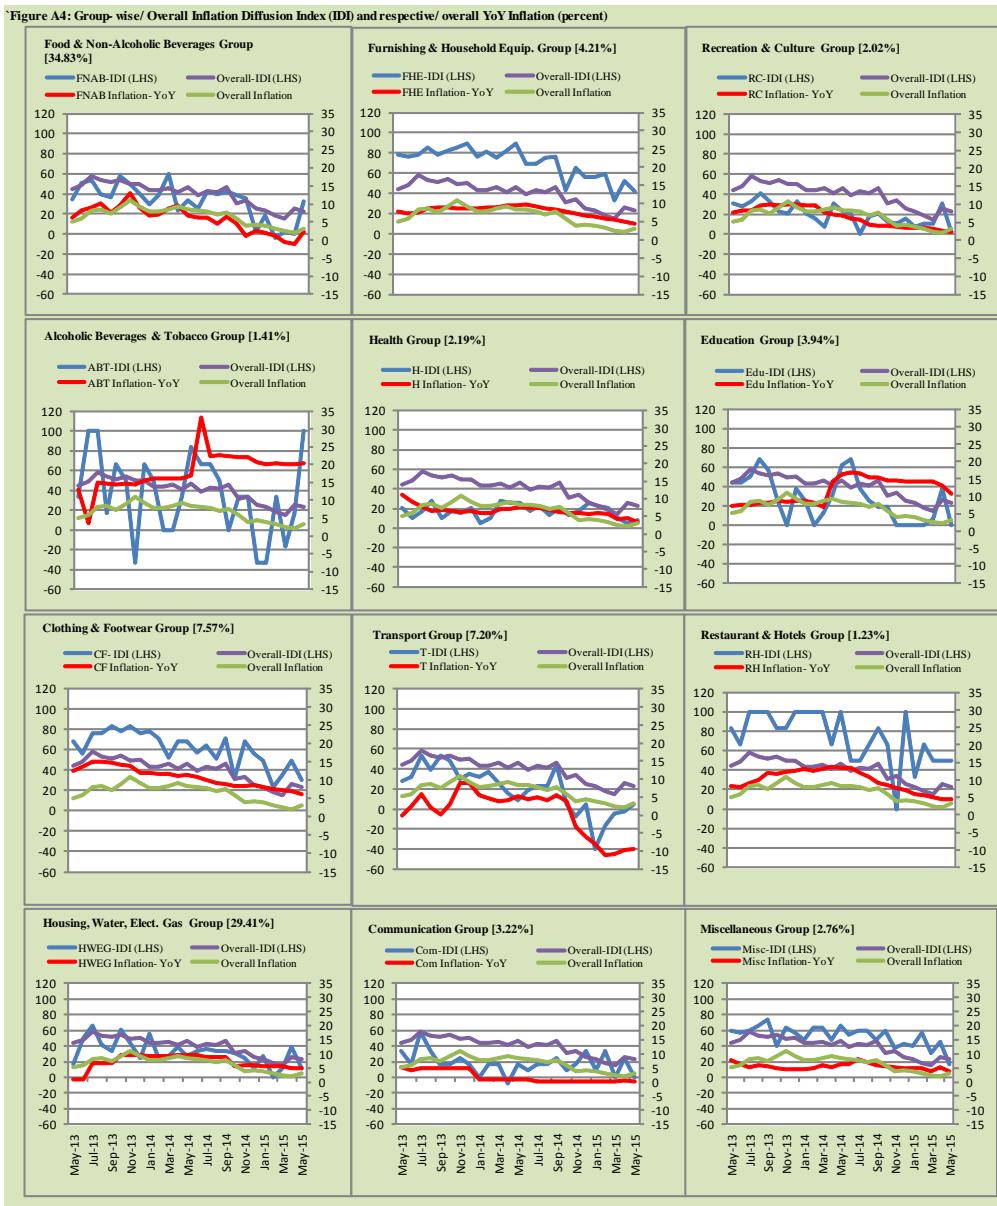

*Inflation Monitor, May 2015*

---

**Figure A3: Frequency Distribution of Price Changes of WPI Commodities, May 2015**

## **Annexure B**

### **Technical Notes**

1. All the three measures of inflation, viz. CPI, WPI and SPI are computed by the following Laspeyres Index formula:

$$I_t = \sum_j w_0^j \left( \frac{P_t^j}{P_0^j} \right)$$

Where  $I_t$  is price index,  $w_0^j$  is weight of commodity  $j$  in the overall basket,  $P_t^j$  is price of commodity  $j$  in period  $t$  and  $P_0^j$  is its price in the base year.

2. Base year for all the indices is the year 2007-08.
3. CPI basket contains 487 consumers' goods; WPI basket contains 463 items; SPI contains 53 items.
4. YoY inflation is the percent change of an index in a given month over the index in the same month of the last year. It is computed as follows:

$$\pi_t = \left( \frac{I_t}{I_{t-12}} - 1 \right) \times 100$$

5. Period average inflation is the percent change of the average index during the period from July to the given month of a fiscal year over the average index during the corresponding period of the last year. It is computed as follows:

$$\bar{\pi}_t = \left( \frac{\sum_{i=0}^{t-v} I_{t-i}}{\sum_{i=0}^{t-12-v} I_{t-12-i}} - 1 \right) \times 100$$

Where  $v$  is the serial number of the month of July of current fiscal year in a given time series.

6. Monthly inflation is the percent change of an index in a given month over the index in the preceding month. It is computed as follows:

$$\pi_t = \left( \frac{I_t}{I_{t-1}} - 1 \right) \times 100$$

7. 12-month moving average inflation (Long-run trend inflation) is the percent change of 12-month moving average of a price index; it is computed as follows:

$$\tilde{\pi}_t = \left( \frac{\sum_{i=0}^{11} I_{t-i}}{\sum_{i=0}^{11} I_{t-12-i}} - 1 \right) \times 100$$

8. Core Inflation is defined as the persistent component of measured inflation that excludes volatile and controlled prices. It reflects the normal supply and demand conditions in the economy. Core inflation is computed by the following three methods:
- a) Non-food, Non-energy inflation (NFNE inflation); it is computed by excluding food group and energy items (kerosene oil, petrol, diesel, CNG, electricity and natural gas) from the CPI basket.
  - b) 20% trimmed-mean inflation; it is computed through the following steps:
    - i. All CPI items are arranged in ascending order according to YoY/12-month moving average/monthly/period average changes in their price indices in a given month.
    - ii. 20 percent of the items showing extreme changes are excluded with 10 percent of the items at the top of the list (corresponding to cumulative weight of 90% or more) and 10 percent of the items at the bottom of the list (corresponding to cumulative weight of 10 percent or less).
    - iii. The weighted mean of the changes in price indices of the rest of the items is core inflation.
  - c) Relatively Stable Component of CPI (RSC-CPI) developed by State Bank of Pakistan is a hybrid method based on permanent exclusion criteria. Volatile price items, to be excluded in the newly proposed

measure RSC-CPI, are identified by analyzing the list and frequency of commodities that have been trimmed frequently in the past while computing monthly weighted trimmed mean measure. Commodities that were trimmed out 13 and above times since July 2008 to February 2013 are selected for permanently excluding from the CPI basket. This newly developed component includes a mix of both food and non-food commodities that show persistent price behavior. Fifty Commodities included comprise relatively stable component (RSC-CPI) with a weight of 67.69. The detailed methodology of RSC-CPI and group wise items along their weights can be viewed at the following link;

<http://www.sbp.org.pk/publications/wpapers/2013/wp66.pdf>

9. Weighted contribution of different items (or sub-groups) to total inflation is worked out as below:

Let the overall index ( $I_t$ ) is the weighted average of price indexes of individual items or sub-groups ( $I_{it}$ ), i.e.

$$I_t = \sum_i w_i \cdot I_{it}$$

The weighted contribution of a single item (or a sub-group) to overall inflation is defined as below:

$$C_{it} = \alpha_{it-12} \cdot w_i \cdot \left( \frac{\pi_{it}}{\pi_t} \right)$$

Where  $C_{it}$  : Contribution of  $i^{\text{th}}$  item to the overall inflation

$$\alpha_{it-12} = \frac{I_{it-12}}{I_{t-12}} ; \text{i.e. ratio of item's index to overall index in the reference month}$$

$w_i$  : Weights of i<sup>th</sup> item

$\pi_{it}$  : Inflation of i<sup>th</sup> item

$\pi_t$  : Overall inflation

10. Annualized rate of inflation (based on a month-on-month rate  $\pi$ ) is computed as follows

$$\text{Annualized } \pi = ((1 + \frac{\pi}{100})^{12} - 1) \times 100$$

#### **Methodology for Estimating Inflation Diffusion Index for Pakistan**

We constructed an index to measure the spread of inflation in the 487 commodities of the CPI basket. It is based on month-on-month (MoM) change in the prices of these commodities and can be obtained by estimating what is known as an ‘inflation diffusion index’ (IDI) as below:

$$\text{IDI} = \frac{\text{Number of Commodities with } \uparrow \text{ in MoM change} - \text{Number of Commodities with } \downarrow \text{ in MoM change}}{\text{Number of Commodities for which prices are reported}}$$

Thus, it is the difference between the share of items with increasing prices (i.e. depicting inflation) and the share of items with falling prices (i.e. depicting deflation) in CPI amongst the commodities for which prices have altered or remained constant<sup>1</sup>.

Based upon commodity level price data from July 2001 to February 2011 we computed inflation diffusion indices overall (general) CPI basket and for all groups in CPI basket (except House Rent Index being single item). A simple analysis<sup>2</sup> suggests that IDI is a leading indicator for Pakistan’s YoY inflation.

---

<sup>1</sup> We do not observe the prices of certain commodities (like the seasonal items) during certain periods of time. To calculate the inflation diffusion index we consider the commodities for which prices have been reported (irrespective of changed or not) during the month under review.

<sup>2</sup> Formal test shows one way ‘Granger’ causality from IDI to YoY inflation.
