## **Preface**

This document presents *Flow of Funds Accounts of Pakistan* for the year 2005-06 (Revised). It contains a brief description of theoretical framework pertaining to detailed flow of funds, financial and capital accounts. The flow of funds accounts highlights statistical relationship of financial activities of all the sectors of Pakistan's economy with one another and with the non financial activities that generate income and production. The system provides extensive sectoral and transactional coverage of financial developments in the economy, i.e., saving and investment, borrowing and lending.

These accounts report total sources of funds flowing to different economic sectors and each sector's total use of funds. The accounts for FY06 have been prepared on the basis of data collected from all sectors of the economy. The data has been transformed into sectoral balance sheets as per guidelines of SNA-93.

State Bank of Pakistan hired services of a foreign Consultant –Mr. John F Wilson an IMF retiree, to review flow of funds accounts and the methodology used in the compilation/revision. We are grateful to him for valuable recommendations to improve these accounts. This document could not be compiled without the unwavering commitment and untiring efforts of the Flow of Funds Division.

Statistics & Data Warehouse Department, State Bank of Pakistan is grateful to institutions and persons for providing basic data and their suggestions in improving the flow of funds accounts compilation. We feel that these statistics would be useful for financial analysis, policy formulation, planning, and decision making.

Dr. Azizullah Khattak  
Director Statistics & DWH Department  
State Bank of Pakistan  
December, 2010

## **1. Introduction**

## **1.1 Background**

Flow of funds accounts analysis was initiated in 1982 by the State Bank of Pakistan in collaboration with Federal Bureau of Statistics and Planning Commission of Pakistan. The framework including sector classifications, transaction categories and compilation procedure were prepared by SBP under the guidelines of SNA-68. With the passage of time, new trends have evolved in the economies. Private corporate sector has emerged stronger in many countries and privatization of state-owned enterprises has taken place. Financial Sector has thrived with innovative products, sophisticated equipments, and diversification of financial instruments. The role of government has been redrawn especially in the countries moving towards market economy. Some countries of the region, like Japan and Philippine have switched over to SNA-93, a revised version of SNA-68. After all these developments, updating compilation methodology of flow of funds became necessary.

The Flow of Funds Accounts 2005-06 have been compiled according to the United Nations' System of National Accounts 1993 (SNA-93). These guidelines are in complete harmony with the sectors of the economy and classification of transactions, estimate of sectoral savings, and investment together with financial flows classified by instruments. Its details are available in the flow of funds accounts summary statements. The accounts have been reviewed by a foreign Consultant on flow of funds accounts to State Bank of Pakistan. We have incorporated his recommendations in the revision of accounts 2005-06.

## **1.2 Conceptual framework of the accounts**

Flow of funds arises from transactions, taking place in economy- involving purchase or sale of goods and services or exchanges of assets and liabilities. These transactions generate flow of funds from one agent to other, and from one sector to other. National flow of funds accounts provides a record of these flows for the whole economy. The accounts covering individual or corporate transactions are called resources-uses statements. Thus the flow of funds accounts or accounts of financial flows record and summarize, in a systematic way, the financial transactions of economy.

The accounts records and maintains the borrowing and lending operations of various sectors of the domestic economy within and with the Rest of the World sector. It also helps to trace the flow of savings through various financial channels and into the

financing of real capital formation. The accounting of financial flows is one component of the national economic accounting.

It shows financial transactions between broad sectors of the economy linking the saving and investment aggregates in other components of the national economic accounting with their associated lending and borrowing activities. This may be used to analyze financial developments.

Flow of funds accounts are sectoral accounts. While these accounts place emphasis on financial corporations because of their important role in financial activity, these also cover financial activities of other sectors. These accounts measure financial flows across sectors of the economy, tracking funds flowing from sectors that serve as resources of capital, through intermediaries to sectors that use the capital to acquire physical and financial assets.

Flow of funds accounts once a separate Statistical system is now linked to the nonfinancial economy by its integration with the national accounting framework, particularly through associating financial data with data on savings and capital formation. Flows of funds are transactions accounts, but they are often linked to balance sheet accounts prepared in conjunction with accounts of stocks of financial assets and liabilities of each institutional sector.

The flow of funds accounts mainly consist of two parts, i.e., non-financial flows and financial flows. Non-financial flows relate to the flow of current income and expenditure, saving and investment. Income and outlay account of a sector relates to the incoming of factor incomes and outgoing of consumption expenditure including net current transfers and presents saving as a balancing entry. Saving is transferred from the income and outlay account to the capital account and is used for investment purposes. Lending / borrowing are the balancing entry of this account depending on whether uses are less or more than the resources of the sector. The essential feature of the non-financial flows is thus to present saving, investment, and net lending/ borrowing. The surplus / deficit in the non-financial flows indicate the saving-investment gap. In fact, the non-financial flows in the flow of funds accounts are the same as the capital account with saving and investment as resources and uses.

The financial flows account is an extension of capital account and describes lending and borrowing operations of the different sectors in the economy. Sectors borrow by

issuing claims on themselves or lend to others by accepting claims on them. A sector may carry out both of these activities in varying degrees. A sector is classified as a deficit sector when the claims issued are more than the claims accepted. Net lending to other sectors is the indication of a surplus sector. The borrowing transactions take the form of increase in liabilities, sale of financial assets or reduction of money balances. The lending operations is, acquisition of financial assets, increase in money balances or repayment of past debts. Increase in liabilities and decrease in financial assets are termed as the financial resources of funds or incurrence of liabilities while increases in financial assets and decreases in liabilities are known as the financial uses of funds or acquisition of financial assets.

The flow of funds accounts are presented on —from whom to whom basis classified by type of the financial instruments. Funds obtained (resources of funds) in any type of financial instrument should be equal to the uses of funds in that form as the financial claims, issued by one sector are held by others. The non-financial flows display the sector's current and capital receipts and payments which give rise to its financial deficit (a net use of funds) while the financial flows show the increases in the sector's financial liabilities (resources of funds) which have allowed it to finance the deficit and acquire additional financial assets (uses of funds). The financial surplus / deficit shows the difference between financial resources and uses of a sector. The sum of the financial surplus / deficit across the sectors should be zero, since any change in one sector's financial liabilities must be matched by change in another sector's financial assets.

A balanced resources and uses of funds account is drawn for each sector to record its savings and borrowings (resources of funds) and its real investment, lending and accumulation of money balances (uses of funds). The surplus / deficit of a sector can be analyzed into issue and acquisition of financial claims. On the pattern of double-entry system of book keeping, these sector accounts interlock because the issue of claims by one sector generates corresponding entry for acquisition of claims by other. The complete set of flow of funds accounts summary matrix for any year is, therefore, an interlocking set of resources and uses for the economy as a whole.

### **1.3 Purpose and value of the accounts**

The flow of funds accounts house many channels through which financial policies

are implemented, particularly if data for the sectors and subsectors, responsible for implementing policies are presented separately from other sectors. For example, to analyze how changes in financial positions affect spending decisions and economic behavior, it is possible to trace the effects of monetary policy actions through the accounts of the central bank, other depository corporations, and nonfinancial sectors. The linkages examined in flow of funds accounts are more extensive than those presented in monetary statistics.

Flow of funds accounts are useful for financial projections and forecasting, by ensuring both:

- i. The internal consistency of financial forecasts and
- ii. The consistency of financial forecasts with national accounts

forecasts. The accounting constraints in the matrix can be built into economic models in which the variables are forecast simultaneously, or they can be used as a consistency check on forecasts of variables that have been derived independently of one another.

Flow of funds accounts are useful in macroeconomic modeling and provide a framework for financial programming. These accounts demonstrate a number of sectoral relationships (including consistency of flows between sectors with macroeconomic objectives such as a sustainable balance of payments position, adequacy of credit from depository corporations to specified sectors, financing central government deficit, etc.)

The accounts facilitate analysis of sectoral movements that balance supply and demand for funds coming from significant sectors of the economy. The quantum and nature of funds that are transferred directly from savers to the investors as also those routed through financial intermediaries are revealed. Changes in the liabilities and assets of foreign countries / institutions are accounted for separately in the Rest of the World sector. Thus the level of domestic savings vis-à-vis financing by the Rest of the World may also be ascertained from these accounts. The flow of funds accounts provides a useful macro-economic framework for investment program analysis.

The intermediary role, played by the financial institutions such as banks, non-bank financial institutions and insurance companies in attracting funds and

responding to the investment needs of the economy may be assessed. The operations of the financial intermediaries in relation to sectoral flows and the structural changes in various forms of their borrowing and lending activities are important to analysts in many ways. This is more important for developing countries where demand for funds and for material resources normally exceeds supply.

When sector accounts are placed side by side and the flow of funds matrix for the economy is constructed as a whole, a wide variety of analytical questions about capital market process and problems of growth can be answered: how private and public capital formation is being financed in a plan period? How much capital is provided from domestic savings and how much from abroad?

Compilation of flow of funds accounts is important for Pakistan as to provide a framework for the analysis of a number of key financial problems in development planning. The financing of the public sector development program including financing of the federal budgetary deficit and the public sector enterprises, management of the balance of payments to ensure adequate foreign exchange reserves and the control of the monetary and banking system with a view to ensuring availability of adequate funds are the problems which can be tackled within the flow of funds framework.

#### **1.4 SNA-68 Vs SNA-93**

The compilation of flow of funds accounts under SNA-93 is different from SNA-68 as:

- i. Though SNA-93 retains the basic theoretical framework of its predecessor, it is more harmonized with other related statistical systems than SNA-68. It introduces a number of features that reflect new analytical and policy concerns of countries and international organizations.
- ii. The new system describes in detail the links between the SNA and the related statistical system on balance of payments prepared by the IMF.
- iii. SNA-93 introduces three subsectors for non-financial corporations, i.e., public, national private, and foreign controlled. SNA-93 expanded the SNA-68 financial sector to include other depository corporations and financial intermediaries, in addition to financial corporations that incur financial liabilities and acquire financial assets on their own account.

- iv. Under SNA-93 approach, a broad category of sectors and sub sectors is identified having greater coverage of financial instruments making estimation of residual sectors limited and progressively smaller.
- v. Under SNA-68 the composite flows were obtained by subtracting two stocks, while under SNA-93 the flows are based on transactions actually taken place(actual flows) ,i.e., change of ownership is considered and usually through cash movement.
- vi. The flow of funds accounts under SNA-93 format can integrate capital accounts with financial accounts transactions and with sectoral and national balance sheet.

### **1.5 The Structure of the Accounts under SNA-93**

SNA-93 contains a consistent and integrated set of economic accounts that cover all institutional sectors and subsectors of the economy and the economic relationships of an economy with the Rest of the World (RoW).The SNA contains a full set of interrelated accounts for transactions and other flows, as well as balance sheets that show the stocks of non-financial assets, financial assets, and liabilities. The main elements of the accounts of the SNA for the economy can be presented as equations that show the internal relationships among main aggregates for the total economy. The basic equations can be combined and rearranged to highlight saving-capital formation relationships and links between the domestic economy and the RoW.

## **2. Sectors of the economy**

A significant element in the preparation of flow of funds accounts is the appropriate grouping of commonly identifiable economic units into sectors. A sector refers to a subdivision of the economy, in particular to a group of decision-making units within the economy that are more or less homogeneous in certain respects. The choice is governed by such considerations as the homogeneity of groups of decision-making units, the availability of basic data and ease in handling.

2. The sectoral classifications follow the United Nations' System of National Accounts (SNA-93), that consists of a coherent, consistent and integrated set of macroeconomic accounts; balance sheets and tables based on internationally agreed concepts, definitions, and classifications and accounting rules. It provides a comprehensive accounting framework in which economic data can be compiled and presented in a format designed for the purposes of economic analysis, decision, and policy making.

**According to SNA-93, the sectors and sub-sectors classification is as following:**

### **1. Non-financial Corporations**

- i. Public sector enterprises
- ii. Other private corporations
  - a. National private
  - b. Foreign controlled

### **2. Financial Corporations**

- i. Central bank
- ii. Other depository corporations
  - a. Deposit money institutions
  - b. Other deposits accepting institutions
- iii. Other financial intermediaries; except insurance corporations and pension funds
- iv. Insurance corporations and pension funds
- v. Financial auxiliaries

### **3. General Government**

- i. Central government
  - a. Federal government excluding NPIs and public sector enterprises
  - b. Federal government NPIs
- ii. State and local government (Provincial governments)

a. Provincial & local government excluding NPIs and public sector enterprises

b. Provincial & local governments NPIs

**4. Households**

**5. Non -Profit Institutions Serving Households (NPISH)**

**6. The Rest of the World**

### **3. Methodology**

To compile flow of funds accounts according to the transactions and classifications of SNA-93, sectoral balance sheet (Performa) for each sector along with reporting guidelines were placed on the SBP Website. We sent specially designed Performa to federal and provincial governmental NPIs to collect their data. As recommended by consultant, we stopped direct data collection from non-financial private and public sectors. So we extracted / estimated data direct from the published balance sheets of the private and public sector enterprises. The data pertaining to Banks, Central bank, NBFCs Depository and Non-depository, Insurance companies and Exchange companies was received from M&FS Division. For the compilation of sectoral balance sheet of governmental NPIs, we used data received from them.

The consolidated balance sheet of a particular sector, presenting a complete picture of its liabilities and assets, is the basis for compilation of the flow of funds accounts. The assets are divided into financial and non-financial assets while liabilities are classified as net worth and other financial liabilities. Increase in physical and financial assets of the balance sheet represent investment and lending on the uses side of the flow of funds accounts whereas increase in reserves and liabilities refer to savings and borrowings on the resources side. As total assets are equal to total liabilities in the balance sheet, the resources match with the uses in the flow of funds accounts. The sectoral balance sheets that together provide an integrated system for measuring economic flows and the resulting stocks of non-financial and financial assets and liabilities are:

- i. Opening balance
- ii. Changes in stock positions (net transactions, valuation changes and other changes in volume)
- iii. Closing balance

Under the principle of accrual accounting, transactions are recorded when economic value is created, transformed, exchanged, transferred, or extinguished. Claims and liabilities arise when there is a change in ownership.

#### **3.1 Sectoral Classification and their Treatment**

##### **3.1.1. Non- Financial Corporations**

###### **Public sector non-financial corporations**

This sub-sector covers enterprises principally engaged in non-financial activities owned or controlled by public authorities incorporating public corporations by virtue of company law or other public acts, special

legislation or administrative regulations. It also holds and manages the financial assets and liabilities as well as the tangible assets involved in the business and that sell most of the goods or non-financial services they produce to the public. These enterprises do not hold and manage financial assets and liabilities apart from their working balances and accounts receivables / payables. As a practical rule, corporations are considered publicly owned or controlled if either the government holds major shares or the government representatives constitute a majority on the board or government effectively controls the operations of the organization. This sub-sector also includes the quasi-corporations, which are financially integrated with the federal government (government enterprises) e.g., Pakistan Railways, Pakistan Post Office. The figures related to Pakistan Railways and Pakistan Post Office were picked up from their appropriation accounts as published by the federal government.

#### **Private non-financial corporations**

This sub-sector includes privately owned and / or controlled enterprises primarily engaged in non-financial activities, which are:

- i. Incorporated enterprises e.g., corporations, joint stock companies, limited liability partnerships, non-credit co-operatives and other forms of business associations which are registered under company and similar laws, acts or regulations and recognized as legal entities.
- ii. Quasi-corporations and relatively large ordinary partnerships and sole proprietorships having complete balance sheets as well as real assets involved in the business.

This sub-sector consists of about 42 thousand companies registered with Security & Exchange Commission of Pakistan (SECP). As per recommendations of the FoF Consultant, we have taken only 300 joint stock companies listed at KSE having significant paid up capital and are major contributors in the production of goods and services, Non-listed companies having foreign participation were taken for analysis.

The data according to sectoral balance sheet was extracted / analyzed from their annual reports, i.e., using their balance sheet, profit & loss account,

cash flow and notes to the accounts as per standard transaction classification of SNA-93. The overall data analysis of private corporate sector was raised with respect to total paid up capital of non-financial corporate sector registered with SECP.

### **3.1.2. Financial Corporations**

#### **Central Bank**

This covers the transactions carried out by the Issue and Banking Departments of the State Bank of Pakistan. The sectoral balance sheet data related to SBP received from M&FS Division.

#### **Other depository corporations**

##### **a. Deposit money institutions**

These are resident depository corporations and quasi corporations, having any liabilities in the form of deposits payable on demand, transferable by cheque or otherwise useable for making payments. Scheduled banks, specialized banks and Punjab provincial cooperative banks fall under this category. In other words, the sub-sector includes all institutions licensed as banks and carrying out regular banking business.

The flow of funds accounts put the banking sector into the context of the demand for funds from the various domestic sectors. The requirements of private corporate business and public sector enterprises for bank credit can be translated into expansion of the domestic portfolio of the banks. This in turn can be translated into a corresponding monetary expansion. If this expansion is excessive, the implications for credit control may be worked out. The sectoral balance sheet FY07 was received from M&FS Division.

##### **b. Other deposit accepting institutions**

These are resident depository corporations and quasi corporations, having any liabilities in the form of deposits that may not be readily transferable or in the form of financial instruments such as short-term certificates of deposits, which are close substitutes for deposits.

These include DFIs, some investment banks, leasing companies and modarabas.

The sectoral balance sheet FY07 was received from M&FS Division.

### **Other financial intermediaries**

These are corporations engaged in financial intermediation, raising funds from financial markets, but not in the form of deposits, and use them to acquire other kind of financial assets. These include discount houses, venture capital companies, mutual funds, housing finance companies and Cooperative banks except Punjab provincial cooperative bank. The sectoral balance sheet and sectoral flow of funds accounts FY07 were received from M&FS Division.

### **Insurance companies**

This sub-sector includes insurance companies (both private and public) consisting of organizations providing life, accident, sickness, fire, casualty or other forms of insurance. This also includes separately organized insurance activities established by fraternal and friendly societies and by private authorities to provide various forms of insurance on a voluntary basis. Postal Life Insurance is also covered under sector. The sectoral balance sheet and sectoral flow of funds accounts FY07 were received from M&FS Division.

### **Exchange Companies**

Exchange Companies type A & B operate under license from State Bank of Pakistan. The sectoral balance sheet data was received from M&FS division. As per recommendations of the FoF Consultant, we merged the data related to Exchange Companies into other financial intermadries to compile flow of funds accounts FY07.

### **3.1.3 General Government**

The formulation of the annual development plan and the annual budget statement will have more or less definite implications for borrowing needs. Government borrowing is essentially needed to fill the gap between the current revenue deficit and the planned capital expenditure including financial assistance to public sector enterprises. The flow of funds accounts

can help to determine the nature and extent of financing which could be arranged from various domestic and foreign sectors.

General Government includes federal government, provincial governments, local governments and governmental NPIs. As per recommendations of the FoF Consultant, the data related to provincial and federal NPIs has been merged into respective governments.

### **Federal government**

This includes all departments, offices, establishments and other bodies, an instrument of the federal government (other than those included elsewhere as financial institutions and non-financial public enterprises) irrespective of whether these agencies are covered in ordinary or extra-ordinary government budgetary accounts or extra-budgetary funds.

### **Provincial and local governments**

All departments, offices, establishments and bodies, constitute provincial and local governments. Included are the four provincial and the local government institutions e.g., district councils, municipal committees / corporations, town committees, union councils and rural works programs and provincial government NPIs.

The sectoral flow of funds financial accounts for FY07 are estimated by using other sectors' data related to provincial governments and other sources of information, including SBP annual report. The aggregate data on economy level related to non-financial savings, investment and fixed capital consumption have been used as published by Planning Commission and FBS respectively with sectoral level adjustment.

### **Federal and Provincial Government NPIs**

Non-profit institutions are legal or social entities created for the purpose of producing goods and services, whose status does not permit them to be a source of income, profit or financial gain. The NPIs financed and controlled by federal or provincial governments are properly constituted legal entities exist separately from governments but are financed and regulated mainly by governments.

The universities, colleges, boards of educations, research institutions and academies are included in this category. The data related to NPIs collected through specially designed proforma and merged with respective governments, as per recommendations of the FoF Consultant.

### **3.1.4 Other Resident Sector**

Private sector savings as derived from the private corporate business, the households and unincorporated business sector are important. It is useful to have such a private sector account when resources and uses are used as a macro-framework. Other resident sector is a residual sector including household and NPISHs engaged in market production. Charging fees determined by costs of production are sufficiently high to have a significant influence on the demand of their services, but any surpluses must be retained within these entities as their status is as NPI. Data for financial account's resources and uses are calculated by cross sector reporting of household data and the non-financial savings & investment data has been estimated by subtracting the identified sectors from estimates for the total economy. All resources of the specified sectors that cannot be identified as uses by the identified sectors are assigned as uses to the residual sector and similarly, all uses of the specified sectors that cannot be identified as resources of the identified sectors are assigned to the residual sector as resources.

### **3.1.5 The Rest of the World**

This sector covers Pakistan's transactions with the rest of the world. The balance of payments and the foreign exchange budget involve policies designed to control the balance of payments deficit. The projected estimates of exports, imports and invisible put together will produce a planned current account deficit, which would need to be financed. A flow of funds exercise could extend the usual balance of payments analysis to articulate the external borrowing requirements for the domestic sectors.

## **3.2 Classification of transactions**

Balance sheet reflects the financial liabilities that the sector has incurred to mobilize financial resources and the financial assets that the sector has acquired. Thus it represents two-dimensional view of a sector's financial instruments, i.e., whether the sector is a creditor or debtor. Resources and uses of funds arise from changes in

liabilities and assets. The various items of liabilities and assets have been classified into the following non-financial / financial transactions:

### **3.2.1 Monetary Gold and SDR**

The gold held by the State Bank of Pakistan as a financial asset and as a component of foreign reserves. Other gold including non-reserve gold held by SBP has been classified as a commodity. SDRs are international reserve assets kept by IMF and allocated to member country to supplement its existing reserve assets. SDR holdings confer unconditional rights to obtain foreign exchange or other reserve assets from other IMF members. The figures of monetary gold and SDRs have been taken from the annual report of SBP.

### **3.2.2 National Currency**

Notes and coins of fixed nominal values accepted as legal tender in an economy, issued by the central bank and / or government. Notes are promissory notes (or bank notes) issued by State Bank of Pakistan in various denominations, with the promise to pay the said denomination (face value) in Pakistani rupee when called for payment. These are issued with the guarantee of the government of Pakistan. Coins are the currency coins issued by the Islamic Republic of Pakistan with various denominations of currency units (Rupee). These also include subsidiary coins (decimal coins) issued by the federal government in sub-denomination of a rupee (paisa 50 / 25). This category should also include currency that is no longer legal tender, but that can be exchanged immediately for current legal tender. The commemorative coins have been excluded and counted as valuables under non-financial assets while analyzing the balance sheets of various sectors of the economy.

### **3.2.3 Foreign currency (notes and coins)**

All foreign currency notes and coins are liability of the foreign governments or non-resident issuing authorities / central banks. These are claims of the economy upon non-residents. While analyzing the balance sheets of various sectors of the economy the valuation changes were estimated by applying \$ rate of reference date on the opening / closing balances and average \$ rate on the transactions and item valuation adjustment on liability side has been used to set off its effect.

### **3.2.4 Transferable deposits**

All demand deposits in national or in foreign currency, i.e., exchangeable on demand at par without penalty or restriction, freely transferable by cheque or otherwise, commonly used to make payments, are known as transferable deposits. These deposits include special savings accounts with a possibility of direct payments to third parties, savings accounts balances subject to automatic transfer to regular transferable deposits, and money-market fund that have unrestricted third-party transferability privileges.

Transferable deposits that are held in banks in the process of liquidation have been excluded and classified as restricted deposits because these cannot immediately used for direct third-party payments. Deposits denominated in national currency have been taken at book value (outstanding amount plus accrued interest). This category includes transferable deposits with SBP, deposit money institutions, or with non-residents. The valuation changes in case of foreign currency deposits have been calculated by applying two ends foreign currency rates and average foreign currency rate of whole year.

### **3.2.5 Other deposits**

These represent all claims and obligations other than transferable deposits in national currency or in foreign currency that are represented by evidence of deposits. Other deposits include:

- Sight deposits (which permit immediate cash withdrawals but not direct third-party transfers).
- Non-transferable savings deposits and term deposits;
- Financial corporations' liabilities in the form of shares or similar evidence of deposits that are legally or in practice, redeemable immediately or at relatively short notice.
- Shares of money-market funds that have restrictions on third-party transferability;
- Call money deposits
- Margin payments related to options or futures contracts are very short-term repurchase agreements.

The deposits for which withdrawals are restricted on the basis of legal, regulatory, or commercial requirements are called restricted deposits. Restricted deposits

include compulsory savings deposits like import deposits, and similar types of deposits related to international trade, security deposits, margin deposits, sundry deposits, and deposits in financial corporations that are closed pending liquidation or reorganization.

The valuation changes in case of foreign currency deposits have been calculated by applying two ends foreign currency rates and average foreign currency rate of whole year.

### **3.2.6 Securities other than shares**

Financial assets that are normally traded in the financial markets and give the holders unconditional right to receive stated fixed sums on a specified dates or unconditional right to fixed money incomes or contractually determined variable money incomes. These securities have been classified as short-term and long-term securities other than shares. These include Government treasury bills, Federal government bonds, Federal investment bonds, Commodity bonds, Pakistan investment bonds, Corporate bonds and Debentures, Negotiable certificates of deposits (non negotiable have been categorized under deposits), Commercial paper, TFCs, PTCs, Modaraba certificates, and negotiable securities backed by loans or other assets.

Preferred stock or shares that pay a fixed income but do not provide for participation in the distribution of residual value of an incorporated enterprise on dissolution have also been included in this category.

### **2.7 Loans**

Loans are financial or other assets by a lender to a borrower in return for an obligation to repay on a specified date or dates, or on demand, usually with mark-up or interest. The value of a domestic currency loan is the amount of the creditor's outstanding claim (equal to the debtor's obligation), which comprises the outstanding principal amount plus any accrued interest (i.e., interest earned but not yet due for payment). Such valuation is referred to as the book value of a loan. The loan valuation has not been adjusted for expected losses. The value of a loan portfolio is adjusted downward only when

1. Loans are actually written off as un-collectible or
2. When the outstanding amount of the loan has been reduced through formal

debt rescheduling. Financial liabilities of corporations are created when creditors (financial institutions) directly lend funds to them. They include repurchase arrangements not included in national broad money definitions (Repo), money at call, export refinance from SBP, borrowing under LMM / LMFR from SBP, borrowings from financial institutions abroad, financial leases, subordinated Loans. Borrowings have further been classified by short-term and long-term.

### **3.2.8 Shares and other equity**

All instruments and records acknowledging claims to the residual value of companies / corporations, after the claims of all creditors have been met are categorized as shares and other equity. Stock or share most commonly refers to a share of ownership in a company including the right to a fraction of the assets of the company, a fraction of the decision-making power, and potentially a fraction of the profits, which the company may issue as dividends. There are several types of shares, including common stock, preferred stock, treasury stock, and dual class shares. Preferred shares have priority over common shares in the distribution of dividends and assets. A dual class equity structure has several classes of shares (for example class A, class B, and class C) each with its own advantages and disadvantages. Treasury stocks are shares bought back from the public.

Preferred stocks or shares have also been included in this category. Investment in mutual funds and NIT units has also been put under this category, for the reason that it gives rise to the equity of issuing institution.

Financial transactions by non-residents related to immovable assets and unincorporated enterprises are included under shares and other equity.

Reinvested / retained earnings of non-resident corporations are also recorded in this category.

The valuation related to investment in shares of listed companies (asset side) compiled by applying market reference date price on opening / closing stocks, so valuation and transaction changes were segregated. The market value of shares on liability side has not been applied because the issuer is not liable to pay.

### **3.2.9 Insurance Technical Reserves**

These are current claims of policyholders and beneficiaries rather than net equity of insurance corporations. Generally these are classified as under:

- Prepayments of premiums, and
- Reserves against outstanding claims with insurance companies.

The data on insurance technical reserves is not clearly available in the printed accounts of companies. Therefore, figures shown by the insurance companies have been taken into account.

### **3.2.10 Other Accounts Receivable / Payable**

Other accounts receivable are assets consisting of trade credit and advances, dividends receivable, settlement accounts, items in the process of collection, accrued income, head office / inter-branch adjustment, expenditure account, suspense items and miscellaneous asset items, etc. Other accounts payable consist of provision for loan losses, provision for other losses, accumulated depreciation, adjustment for head office / branch, dividends payable, settlement accounts, suspense accounts, deferred tax liabilities, accrued wages, rent, social contributions, accrued taxes, mark-up / return / interest payable, mark-up on NPL & investment, income account, miscellaneous liability items.

### **3.2.11 Non-Financial Assets**

Entities that give its owners economic benefits by holding them or using them over a period of time are called non-financial assets. Non-Financial assets consist of tangible assets, both produced and non-produced, and intangible assets for which no corresponding liabilities are recorded.

#### **Produced Assets**

Produced assets comprise non-financial assets acquired as outputs from production processes. They are:

- i. **Fixed assets**-assets that are used repeatedly, or continuously, in production processes for more than one year and that may be tangible (dwellings, other buildings and structures, machinery and equipment, and cultivated assets, such as livestock for breeding and plantations) or intangible (mineral exploration, computer software, and entertainment, literary, or artistic

originals).

- ii. **Inventories** (materials and supplies, work-in-progress, finished goods, and goods for resale) and
- iii. **Valuables** (assets that are acquired and held primarily as stores of value).

### **Non-produced assets**

These are both tangible and intangible assets acquired through other than processes of production. Tangible non-produced assets include land, subsoil assets, water resources, etc. Intangible non-produced assets include patents, leases, and purchased goodwill.

### **3.2.12 Valuation adjustment**

Valuation adjustment represents the net opposite of all changes (Surplus / deficit on revaluation) in the values of assets and liabilities on the balance sheets of a corporation except for valuation changes recorded in the profit and loss accounts. The valuation adjustment is market valued by definition.

## **4. Integrated Capital and Financial Account of Pakistan**

A sector's non-financial transactions generate changes in financial assets or liabilities. These changes are, in turn, recorded as the sector's financial transactions. This interrelationship sets the stage for the development of the flow of funds account, which provides a record of non-financial and financial transactions among the main macroeconomic sectors in a consistent and comprehensive framework.

The integrated financial and capital account is a two dimension matrix that covers all institutional sectors and financial assets categories. For each sector and for the total economy, it presents net incurrence of liabilities (resources) and net acquisition of financial assets (uses).

The account shows moment in financial assets and liabilities along with non-financial saving and investment of all sectors of economy.

The sectoral accounts of deposit money institutions, other deposit accepting institutions, other financial intermediaries, Insurance, State Bank of Pakistan, non-financial private and public sector's accounts do not reflect any discrepancy between financial and non-financial lending and borrowing because the two sets of data sources are same, i.e., sectoral balance sheets which are prepared by FoF division or using original source, while general government sector showing discrepancy of Rs 8 billion and other resident sector which is residual sector shows discrepancy of Rs -94 billion. Because we used total of non-financial saving and investment at economy level compiled and published by planning commission of Pakistan and PBS, under National Accounts.

## 5. Detailed Flow of Funds Accounts

Flow of funds accounts exist in various forms. These differ according to the analytical needs complexity, and details of the accounting presentation and data requirements. The simplest flow of funds accounts identifies importance of financial transactions among sectors at an aggregated level. The most complex flow of funds accounts consist of a three-dimensional matrix that relates the creditor sector, the debtor sector, and the financial asset used in the transaction. The country's approach to flow of funds accounts depends on its current state of statistical development and analytical needs. Flow of funds accounts which follow the form of the SNA-93 financial account can be completely integrated with capital account transactions and with sectoral and national balance sheets. The flow of funds accounts summary matrix is an inter-locking set of resources and uses of funds, entries pertaining to various institutional sectors of the economy and transaction categories.

The linkage of creditor and debtor by type of financial asset indicates which sectors are providing financing for other sectors and which type of asset is used in the financing. As to the layout of the accounts, the columns relate to institutional sectors, each column has a pair of sub-columns for recording flow of liabilities and assets. Rows relate to transaction categories and at the end of each column is the magnitude of the financial surplus / deficit and the corresponding net lending / borrowing by each sector. The detailed flow of funds accounts of Pakistan for FY06 consists of 10 sectors / sub-sectors of the economy. It shows financial liabilities & assets and financial instruments used in the transactions.

The flow of funds accounts summary matrix for FY 06 reveals that the deposit money institutions raised funds through deposits of Rs.471 billion during the year compare to Rs.407 billion in FY 05. Major contributor was the other resident sector having share of 55 %, while the 2<sup>nd</sup> largest contributor was private corporate sector having share of 15 % compared to 61 percent and 26 % respectively in the previous year. The deposit money institutions mobilized these resources by providing credit to other sectors of economy to the extent of Rs.502 billion in FY 06 and 435 billion in FY 05. The major borrower was non-financial private corporate sector having Rs.186 billion in FY06 which is 37 % of the total loans extended by the deposit money institutions compared to 310 billion in FY 05. The other largest borrower of deposit money institutions in FY 06 was other resident sector including household and NPISHs amounting to Rs.86 billion (17 percent) as against Rs.117 billion (27 percent) in FY 05. The deposit money institutions invested an amount of

Rs. 127 billion in long term securities of non-financial private corporations as compare to investment of Rs.12 billion in FY05. The deposit money institution sector was net lender of Rs.42 billion to various sectors of economy in FY06 compared to Rs.51 billion in FY 05.

The private non-financial corporate sector created resources amounting to Rs.224 billion through foreign investment by shares & equity. This sector acquired total loan amounting to Rs.301 billion from all the sectors including non-resident in FY 06 compared. This sector remained net borrower to the tune of Rs.223 billion in FY 06.

The Federal Government including federal NPIs incurred liabilities amounting to Rs.242 billion in FY 06 including issuance of securities net amounting to Rs.177 billion, compared to liabilities of Rs.201 billion and issuance of securities amounting to Rs.138 billion in FY 05 .It also created loan of Rs.51 billion compared to Rs.48 billion in FY 05, mainly from nonresident sector and became a net borrower of Rs.104 billion.

The other most important sector of economy was the other resident sector including household and NPISHs during FY06. The funds amounting to Rs.256 billion flowed from this sector in the form of deposits mainly towards deposit money institutions. This sector also invested Rs.17 billion in the equity of financial and non financial corporate sectors, during FY 06, the sectoral flow of funds remained surplus and provided 63 billion in FY 06 to other sectors of economy being net lender.

There is an inverse relationship between domestic and Rest of the World sector. There was an outflow in the deposits amounting to Rs.117 billion (Rs.17 billion outflow in FY 05) in shape of foreign currency deposit mainly with the central bank. Private non-financial sector increased its long term loan liability amounting to Rs.14 billion and central government incurred long term loan liability amounting to Rs.48 billion towards Rest of the World sector in FY 06. There was an inflow of Rs. 224 billion in FY 06 in shape of investment in shares & equity of non financial private corporate sector from Rest of the World sector. This sector showed a surplus of Rs. 299 billion (Rs.92 billion in FY 05) and it was net lender to the domestic economy. This detailed flow of funds matrix reflect that in FY06, the domestic sectors namely deposit money institutions, other depository corporations, other financial corporations, insurance companies, the central bank, provincial government and other resident sector remained surplus/net lenders and funds flew towards deficit/net borrowers domestic sectors of economy namely including private and public non- financial

corporations, Federal Government including federal NPIs. While in FY 06 overall domestic economy remained in deficit /net borrower and funds flowed from Rest of the World sector that remained surplus/net lender to domestic economy of Pakistan, leaving a statistical discrepancy of Rs.86 billion.

## 6. Financial Accounts

Financial account shows financial transactions among institutional units and between domestic units and the rest of the world. Financial transactions cover all transactions involving change of ownership of financial assets, including the creation and liquidation of financial claims. Net lending/borrowing equals net acquisition of financial assets less net incurrence of liabilities.

**Financial Assets**-Entities over which ownership rights are enforced by institutional units and from which economic benefits may be derived in the form of holding gains or property income.

**Financial Liabilities** are the financial obligations of institutional units juxtaposed to financial assets of other units. Although financial account shows the net financial assets acquired and the net liabilities incurred by type of financial asset and by sector, the account does not link specific assets to specific liabilities. Net lending/borrowing is carried forward to the financial account as a resource. Within this framework, net incurrence of financial liabilities is treated as a source of funds, and the total of net lending/borrowing and net incurrence of liabilities can be used for net acquisition of financial assets as a use of funds.

The financial accounts of Pakistan 2005-06 shows main sectors & sub sectors, main financial assets and liabilities including ,monetary gold & SDRs, currency & deposits, securities other than shares, loans, share & equity, insurance technical reserves and accounts receivable/payables. The balancing entry on top of the accounts shows net lending/net borrowing i.e. change in assets acquired less change in liabilities incurred, because incurrence of liabilities reflects sources of funds while acquisition of assets shows uses of funds. The accounts recorded acquisition of assets in the first part of accounts and changes in liabilities in the second part of the accounts, showing incurrence of liabilities to the sectors.

Deposit money institutions sector was surplus and net lender of Rs.42 billion (Rs.51 billion in FY05) , as it incurred net liability of Rs.846 billion mainly through deposits of Rs.471 billion and acquired net financial assets of Rs.888 billion mainly through loan asset of Rs.502 billion.

The central bank incurred net financial liability of Rs. 235 billion and acquired net financial assets of Rs.247 billion and have surplus of Rs.12 billion (Rs.11 billion in FY 05) for lending to deficit sectors of the economy.

The non financial private sector showed deficit/net borrowing of Rs.223 billion by incurrance of net financial liability of Rs.452 billion mainly through loan & advances from deposit money institutions.

In FY06 federal government remained in deficit and the second largest net borrower of Rs.104 billion in the economy and incurred net liability of Rs.243 billion mainly by issuing short term securities (Treasury bills) net of Rs.164 billion and acquired net financial assets of Rs.138 billion.

The other resident sector including household & NPISH remained surplus and provided Rs.63 billion to the domestic economy. This is the residual sector and having cross sector data including leftover. It maintained deposits of Rs.256 billion and acquired loan & advances of Rs.84 billion.

Rest of the World sector showed surplus/ net lender to the domestic economy by Rs.299 billion (Rs 92 billion in FY 05) as it incurred a net liability of Rs.63 billion including deposits of Rs.-117 billion of SBP. This sector acquired net assets of Rs.361 billion mainly through acquisition of shares & equity of Rs.232 billion in the domestic economy.

## 7. Capital Account

This account records acquisitions and disposals of non-financial assets resulting from transactions with other units or internal book keeping transactions linked to production (own account capital formation, changes in inventories, and consumption of fixed capital), and measures the changes in net worth as a result of saving and capital transfers received from abroad. The balancing item is net lending or net borrowing, depending on whether saving *plus* capital transfers is *less* than the net acquisition of non-financial assets.

### 7.1 Savings

In the major capital account components, *saving* is the final balancing item of the current accounts—the part of disposable income that is not spent on final consumption of goods and services and therefore is available for acquisition of non-financial or financial assets or repayment of liabilities. Saving is presented on both gross and net basis. The difference between gross and net saving is consumption of fixed capital.

### 7.2 Current External Balance

*Current external balance* represents the balance with the rest of the world on exports and imports of goods and services, net primary income from abroad, and net current transfers from abroad. The current external balance is an integral part of an economy's saving and is equal in magnitude, but opposite in sign, to the domestic economy's net lending/net borrowing, and thus equal to the difference between an economy's saving *plus* net capital transfers and capital formation. It is also equal in magnitude, but opposite in sign, to the current account balance of the BOP.

### 7.3 Capital Transfers

*Capital transfers receivable/payable* are unrequited transactions, which may be in kind or in cash. Capital transfers in kind arise when ownership of an asset other than inventories and cash is transferred from one unit to another or liabilities are canceled by a creditor (debt forgiveness). A transfer in cash is capital when it is linked to, or conditional on, the acquisition or disposal of an asset (other than inventories or cash) by one or both parties to the transaction. Both capital transfer receivables and payables are recorded on the right side of the account because they directly affect net

worth. A capital transfer receivable increases net worth, while a capital transfer payable reduces net worth.

#### **7.4 Gross Fixed Capital Formation**

*Gross fixed capital formation* includes acquisitions *less* disposals of new and existing fixed assets. Fixed assets are tangible and intangible assets created as outputs of production processes that are themselves used repeatedly in production for a period of more than a year. Consumption of fixed capital during the accounting period is shown as a separate item—consumption of fixed capital—rather than as disposal of an asset.

#### **7.5 Consumption of Fixed Capital Expenditure**

*Consumption of fixed capital* reflects the decline in the value of the stock of fixed assets used in production as a result of physical deterioration, normal obsolescence and normal accidental damage. It excludes the value of fixed assets destroyed by acts of war or exceptional events such as natural disasters. Gross fixed capital formation *less* consumption of fixed capital equals net fixed capital formation.

#### **7.6 Changes in Inventories & Valuables**

*Change in inventories* comprises the value of the inventories acquired by an enterprise *less* the value of the inventories disposed of during an accounting period. *Acquisitions less disposals of valuables* refers to net transactions in goods (artwork, antiques, numismatic coins of precious metal, etc.) that are held as stores of value over time or to realize holding gains.

#### **7.7 Changes in Non-produced Assets**

*Acquisitions less disposals of non-produced non-financial assets* refers to acquisitions *less* disposals of land, other non-produced tangible assets (e.g. subsoil assets), and intangible non-produced assets (e.g., patented entities, leases, and purchased goodwill).

*Net lending / net borrowing* is the balancing item of the capital account, calculated as net saving *plus* capital transfers receivable *less* capital transfers payable *less* acquisition *less* disposals of non-produced non-financial assets. The net resources available to an economy or sector from saving and net capital transfers that are not

used for capital accumulation are the amount of resources available for net acquisition of financial assets, that is, net lending.

## **7.8 Statistical Discrepancy**

The statistical discrepancy could be raised due to any of the following reasons-:

- Statistical discrepancy for a sector indicates the extent to which net lending/ borrowing differs from the financial surplus/ deficit for that sector net financial investment is always equal in concept to net lending/borrowing.
- Discrepancy can arise in practice because of gaps in coverage or non-measurement of any of the items in the full sequence of accounts.
- Statistical discrepancy is mainly attributable to data deficiencies in terms of reporting, coverage, classification, timing, valuation, etc.
- The blowing up of various assets/ liabilities items on the basis of paid-up capital/ sanctions by the Securities & Exchange Commission of Pakistan may be responsible for various discrepancies.
- The flow of funds accounts have been drawn on June 30. To match the resources and uses it is necessary that all the data should relate to this date which is not the case. Sectors as well as constituent units of the sector may not follow uniform accounting periods. Joint stock companies adopt different accounting periods and deposit money institutions, insurance companies and non-bank financial institutions mostly publish their accounts on calendar year basis.

## **7.9 Capital Account of Pakistan 2005-06**

The data compilation of non financial savings, investment (Capital accounts) is the portfolio of the government of Pakistan, while the compilation of financial accounts is the responsibility of State Bank Pakistan (SBP).

The full set of flow of funds accounts comprise on financial accounts, capital accounts and integration of the both. There is data constraint in the construction of capital accounts of Pakistan, as savings and investment data supplied by Planning Commission of Pakistan and Federal Bureau of Statistics respectively are not fully harmonized with transaction and sectorization of SNA 93, while FOF financial accounts compiled by SBP are completely harmonized.

This data gap has been filled by compiling the savings of insurance, deposit money institutions, other depository corporations, financial corporations, central bank, non-financial public and private corporations, which comprise on sum of their retained earnings and general & special reserves. The investment is based on corporate balance sheet data, the figure related to total savings & investment for the whole economy and related to general government is the same as reported by these government agencies, while our compiled saving and investment data for the financial and non-financial corporate has been adjusted in the household sector. The savings related to Rest of the World sector is estimated as current account balance of BOP but with opposite sign. The Capital Account of Pakistan 2005-06 shows gross savings related to all sectors of the domestic economy and Rest of the World.

The saving of Rs. 638 billion related to other resident sector including household & NPISHs, while the savings related to Rest of the World sector are estimated as current account balance Rs. (299) billion, opposite in sign, as compiled in BOP.

The General Government sector is comprising both federal , provincial governments and NPIs, showing a composite positive saving of Rs.116 billion and gross capital formation of Rs.198 billion compared to Rs.-45 billion and Rs.150 billion in FY 05, with net deficit of Rs.90 billion (Rs.123 billion in FY 05) leaving composite statistical discrepancy of Rs.-8 billion while comparing to financial borrowing. The resources gap was largely met through net issue of Treasury bills of Rs.163 billion (Rs.236 billion in FY 05) and increased in loans and advances amounting to Rs.48 billion from rest of the world sector. Apart from meeting expenditure on its gross capital formation, the federal government provided Rs.34 billion to non-financial public sector enterprises as loan & advances.

The non-financial private corporate sector recorded savings of Rs. 392 billion while the gross capital formation amounted to Rs. 615 billion resulting in a deficit of Rs. 223 billion which is its resource gap met through issuance of Rs.126 billion securities other than shares to other financial corporations and incurrence of loan & advances amounting to Rs.301 billion from deposit money institutions during the

year. The other resident sector shows a deficit/borrowing of Rs.-31 billion and recorded a statistical discrepancy of Rs.94 billion.

The estimates of provision for fixed capital consumption, gross fixed capital formation and change in stocks for economy as a whole have been adopted from the 'National Accounts of Pakistan' compiled by the Federal Bureau of Statistics. They do not, however, show the statistical discrepancy in the national accounts estimates. The figures of gross capital formation in respect to non-corporate and households sector (other resident sector) have been taken as the residual on the basis of the national accounts estimates for the economy.

The sectors of domestic economy including insurance, other deposit accepting institution, deposit money institutions, other financial corporations, central bank of the domestic economy remained (surplus) net lender while non-financial public, private corporations and general government and other resident sectors remained (deficit) net borrower within the domestic economy.

The economy remained in deficit of Rs.385 billion in FY06, which is met through inflow (Borrowing) of Rs.299 billion from rest of the world sector, leaving a statistical discrepancy of Rs.86 billion.

## 8. Sectoral Positions in the Flow of Funds Accounts

The sectoral levels / outstanding financial assets and liabilities positions have been compiled on the basis of closing balances of different instruments for each sector as on 30<sup>th</sup> June, 2006.

The deposit money institutions reflects Rs.2,295 billion as loans outstanding at the end of FY 06 which is 50 % of their total assets, comprising 36 % and 14 % of short and long term loans respectively, while they incurred liability of Rs.2,876 billion on account of deposits, which is 62 % of its total assets as on 30<sup>th</sup> June,2006

The position of State Bank of Pakistan reflects an outstanding balance of Rs.712 billion invested in government's Treasury Bills, which is 40% of its total assets. The major outstanding liability of SBP is Rs.784 billion on account of notes in circulation which is 45% of its total liabilities as on 30<sup>th</sup> June, 2006.

The outstanding level of total assets of non-financial private corporate sector is Rs.5,827 billion comprises of 951 billion currency and deposits, mainly held with deposit money institutions, which is 16% of its total assets and Rs 3784 billion or 65 % of total assets comprises of non-financial capital formation. The main liability of the sector comprise of loans of Rs.1396 billion or 24% of its total liabilities and mainly taken from deposit money institutions.

The federal government including federal NPIs is having deposits of Rs.311 billion, mainly with deposit money institutions, which is 32% of its total assets in coverage. An amount of Rs.469 billion or 48 % of its total assets in coverage is outstanding on account of loan extended to public sector enterprises. The liability side reflects an outstanding amount of Rs.142 billion the account of employees' retirement benefits and an amount of Rs.2, 205 billion on account of outstanding securities issued.

The other resident sector including household & NPISH have cross sector's data. The assets of this sector reflect outstanding balance under currency & deposits of Rs.2,234 billion or 40% of its total assets in coverage comprises on 32% on cash and 68% deposits mainly with deposit money institutions. It also has outstanding balance of Rs.996 billion or 24% investment in government securities. There is an amount of

Rs.1832 billion on account of other accounts receivables, which has been compiled by adding other accounts receivables/ payables of all the sectors of economy (Net), which is 33 % of its total assets. The major liability of this sector comprises of account of outstanding loan balance of Rs.393 billion as on 30<sup>th</sup> June, 2006, mainly taken from deposit money institutions.

Level flow discrepancy may arise by subtracting two closing balances and the difference is not equal to the transactional flow because the difference of two levels involves valuation changes and other changes in volume.
