# 1. Overview

Inflationary pressures eased during June 2010 as shown by fall in inflation measured by all price indices compared to both the previous month and the corresponding month last year (**Figure 1.1**). This decline is attributed to both food and nonfood inflation. But the greater decline was in the non-food (mainly due to downward adjustment in administered prices of fuels, <sup>1</sup> as well as, moderation in HRI).

<sup>\*</sup> NFNE is Non-food non-energy inflation; \*\* SPI for all income groups combined.

<sup>1</sup> It is important to note that FBS incorporates changes in fuel prices effective from 1<sup>st</sup> day of the month in the computation of preceding month's price index. For example, downward changes effective from 1<sup>st</sup> July, 2010 were incorporated in the price statistics for June 2010.

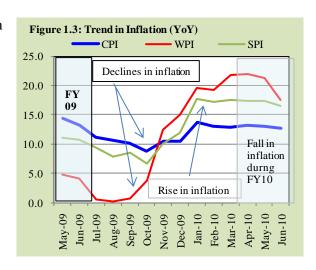

However, only one of the two core inflation measures, the trimmed mean inflation, followed the broad price indices. The trimmed mean inflation (YoY) declined in June 2010 compared to May 2010 (**Table 1.1**). It is a reflection of principal contribution of decline in the prices of fuels during the month. NFNE witnessed a rise.

Specifically, headline CPI inflation dropped to 12.7 percent during the last month of FY10 compared to 13.1 percent in May 2010.

Similarly, WPI inflation declined sharply from 21.2 percent in May 2010 to 17.6 percent in June 2010.

SPI inflation also decelerated to 16.5 percent in June 2010 from 17.4 percent a month earlier. It is interesting to note here that inflationary pressures were easing in the beginning of the fiscal year 2009-10, resurged strongly during second and third quarters, but then

again showed some moderation in the final months of FY10 (see Figure 1.3).

# 2. Consumer Price Index

Headline CPI inflation declined to 12.7 percent in June 2010 from 13.1 percent in May 2010. While, this reinforces the view that inflationary pressures have eased somewhat, a flattening of this trend in recent months is highlighting risks of resilience in inflationary pressures, at least at present levels (see **Figure 2.1**).

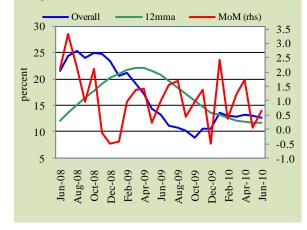

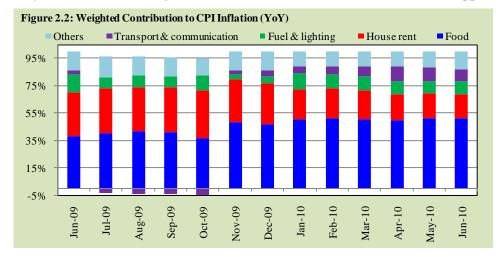

Figure 2.1: Consumer Price Inflation (YoY)

This decline in inflation was principally contributed by CPI

non-food inflation (YoY), although CPI food inflation (YoY) also witnessed a slight fall. This is further evident in weighted contribution of food and non-food components in overall CPI inflation (YoY). Weighted contribution of food component in overall inflation (YoY) rose to 51.3 percent in June 2010 compared to 50.9 percent recorded in May 2010. However, weighted contribution of non-food inflation (YoY) dropped to

48.7 percent during the month under review compared to 49.1 percent contribution in May 2010 (see **Figure 2.2**).

However, CPI inflation (MoM) showed an uptick during June 2010. It is also important to note that the long run trend of inflation, indicated by 12-month moving average (12-mma) reached at its lowest levels for 25 months in June 2010. CPI inflation (12-mma) was 11.7 percent in June 2010 which is significantly lower than the 20.8 percent inflation recorded in June 2009.

#### 2.1 Food Inflation

CPI food inflation moved in a narrow range between 14.5 to 15.5 percent in the last

six months of FY10. CPI food inflation slightly declined to 14.5 percent in June 2010 from 14.8 percent in the previous month. The June 2010 figure remains substantially higher than the 10.5 percent recorded during June 2009. In recent months, resilience in food inflation is also evident from its long-term trend (12-mma), which has bottomed down to 11.9 percent in April 2010 and resurged

at 12.5 percent during the month under review compared with 12.1 percent a month earlier.

Food inflation is largely emanating from a few items. Imported food commodities, higher cost of transportation, and supply shortages in domestic market are factors

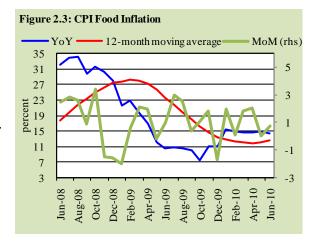

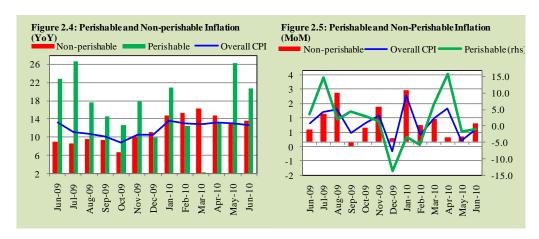

Table 2.1: Inflation in Select Food Items (YoY)									
Ite ms	Percentag	e Change	Contrib	ghted ution in iflation	Weighted Contribution in Overall Inflation				
	May-10	Jun-10	May-10	Jun-10	May-10	Jun-10			
Milk Fresh	17.0	15.4	19.2	18.2	9.8	9.3			
Meat	24.9	26.3	14.0	15.1	7.1	7.7			
Vegetables	32.0	36.6	9.0	10.7	4.6	5.5

Pulse Moong	108.7	134.3	2.9	3.8	1.5	1.9			
Readymade Food	13.1	12.6	3.8	3.8	1.9	1.9			
Cigarettes	20.8	24.2	2.8	3.3	1.4	1.7			
Vegetable Ghee	8.9	6.1	4.1	2.9	2.1	1.5			
Chicken Farm	23.6	20.0	3.3	2.8	1.7	1.4			
Pulse Mash	95.7	92.4	2.7	2.7	1.4	1.4			

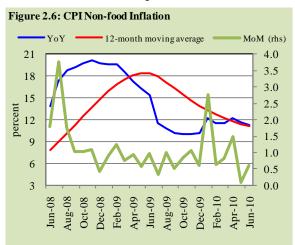

behind resilience in CPI food inflation. Moreover, higher prices of certain food items, such as fresh milk, meat, sugar, pulses are also reflected in higher weighted contribution in food inflation as well as in overall inflation (see **Table 2.1**).

Inflation (YoY) in non-perishable items remained unchanged during June 2010 at the preceding month's level of 13.6 percent, but it was higher than the 9.0 percent seen in June 2009. On the other hand, inflation (YoY) in perishable food items fell to 20.8 percent in June 2010 from 26.2 percent in May 2010 and 22.8 percent in June 2009.

Contrary to YoY inflation in non-perishable items, there was persistence in food

inflation on MoM basis which mainly came from non-perishable food items. The MoM food inflation stood at 0.9 percent during the month under review compared to 0.3 percent a month earlier. Prices of besan, sugar, gur, pulses, etc. increased during June 2010 compared to the previous month. On the other hand, deflation in perishable food items continued as was observed in the previous month dropping to 0.9 percent in June 2010 against 1.7

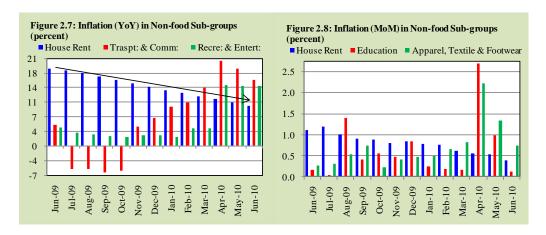

percent in May 2010. This was due to a sharp fall in prices of onions, fresh fruits, and potatoes in the month under review. Rise in the prices of vegetables was not enough to offset deflationary pressures in the perishable food items.

#### 2.2 Non-food Inflation

Similar to food inflation, non-food inflation (YoY) has fluctuated in a narrow range of 1.0 percentage point since the start of this calendar year. Non-food inflation was 11.2 percent in June 2010 compared to 11.7 percent in May 2010; lower than 15.4 percent during June 2009. On MoM basis, inflation in non-food group was 0.6 percent during the month under review against 0.1 percent during the previous month. Out of nine sub-groups of CPI non-food component, inflation (YoY) in three sub-groups declined, increased in five sub-groups, whereas it remained unchanged in one sub-group during the month under review compared to the previous month.

Sub-groups registering decline in inflation (YoY) in June 2010 compared to May 2010 include *house rent, transport & communication, and recreation & entertainment* sub-groups.

House rent index (HRI) inflation (YoY) continued its declining trend and dipped to 9.7 percent; the lowest level in this sub-group since January 2008. Inflation in the sub-index was 10.5 percent in May 2010 and 18.6 percent in June 2009.

Similarly, inflation in *transport & communication sub-group* was 15.8 percent which is lower than 18.7 percent in the previous month and 10.8 percentage points higher than the level in the corresponding month last year. However, on MoM basis, inflation

in the sub-group was 0.6 percent during the month under review compared to the previous month's deflation of 2.1 percent in the sub-group.

Decline in inflation (MoM) in *house rent, education, and apparel, textile & footwear sub-groups* was recorded during June 2010 compared to May 2010 (see **Figures 2.7 & 2.8**).

Item-wise analysis of CPI non-food basket shows that six items recorded deflation during June 2010, 51 items showed no change in prices, 37 items registered inflation up to 5.0 percent, 71 items recorded inflation between 5.0 to 10.0 percent, and 84

items witnessed inflation above 10.0 percent. Only one item, postal envelopes, registered price increase of 100.0 percent during the month under review. It is important to note that percent of number of items recording double digit price increases within nonfood group has been increasing while those registering subdued price rises has been declining. Similar to previous months, percent of items within non-food group of CPI basket which recorded significant price rises during June 2010 increased to 34.0 percent from 31.6 percent during May 2010. On the other hand, percent of items registering subdued inflation reduced from 42.0 percent in May 2010 to 37.6 percent in June 2010 (see Figure 2.9).

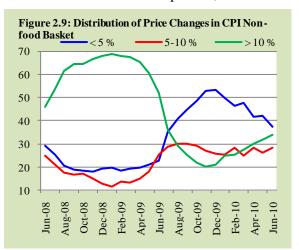

Table 2.2: City	-wise Inf	lation of	Selected	Cities		percent	
	Jun-09		May	-10	Jun-10		
	MoM	YoY	MoM	YoY	MoM	YoY	
Over all CPI	1.0	13.1	0.1	13.1	0.6	12.7	
Islamabad	1.0	12.9	0.1	11.4	0.6	9.7	
Lahore	1.4	12.9	-0.2	12.8	-0.2	11.4	
Karachi	0.8	11.6	0.5	13.7	-0.4	13.9	
Quetta	1.4	11.7	0.6	12.2	1.6	11.3	
Peshawar	1.7	12.8	-0.8	12.3	0.8	13.0	

#### 2.3 City-wise Inflation

Inflation (YoY) in major cities of the country was lower than overall inflation, except in Karachi and Peshawar, during June 2010 compared to May 2010. In the latter month, Karachi was the only city having higher inflation than overall CPI inflation.

On MoM basis, inflation in all major cities of the country except Quetta was lower than overall inflation (MoM). Indeed, two cities, Lahore and Karachi, witnessed MoM deflation during the month under review.

Segregated data from 35 cities of the country shows that 18 cities had higher inflation compared to 17 cities with low inflation cities. Furthermore:

- Highest inflation (YoY) was recorded in Nawabshah against lowest inflation in Loralai & Cantonment area;
- Highest food inflation was registered in Mianwali and lowest in Loralai & Cantonment area;
- Highest non-food inflation was recorded in Bannu whereas Islamabad witnessed lowest non-food inflation (see **Table A6**).

# 2.4 Income Group-wise Inflation

Incidence of inflation YoY was highest on middle income group during June 2010, unlike the previous month when the incidence was on highest income group. However, inflation in all income groups was lower during June 2010 than inflation during the corresponding month of the preceding year. Inflation was highest in the income group having monthly income of Rs 5001-12000. Incidence of food as well as non-food inflation (YoY) was highest on highest income group.

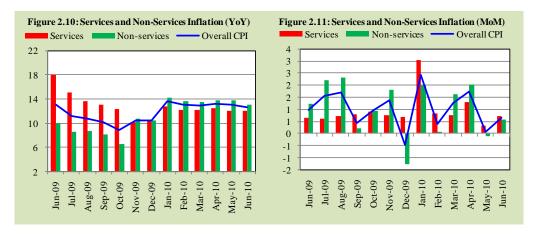

On the other hand, Inflation (MoM) in all income groups increased during June 2010 from that in a month earlier. Lower income groups (with monthly income less than Rs 5000/) were most severely hurt by inflation (MoM) during the month under review. Highest incidence of food was on lower income groups while the lowest income group bore the brunt of high non-food inflation.

Table 2.3: Inco	Table 2.3: Income Group-wise CPI Inflation         percent										
	Upto 3	3000	Rs. 3001	1-5000	Rs. 5001	-12000	Above Rs	. 12000

CPI Food	-0.4	0.9	-0.4	0.9	-0.1	0.8	0.4	0.5			
CPI Non-food	0.2	0.9	0.2	0.8	0.2	0.8	-0.1	0.4			

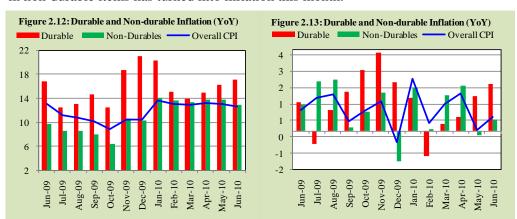

#### 2.5 Services & Non-services

Inflation (YoY) in services sector during June 2010 remained stable at 12.0 percent, the level of May 2010; lower than 18.0 percent during the same month last year. On MoM basis, services sector recorded 0.7 percent inflation in June 2010 against 0.3 percent in the previous month.

Inflation in non-services sector declined to 13.1 percent in the month under review from 13.8 percent during the last month. Similarly, on MoM basis, 0.6 percent inflation was recorded in non-services sector in June 2010 against last month's deflation of 0.1 percent (see **Figures 2.10** & **2.11**).

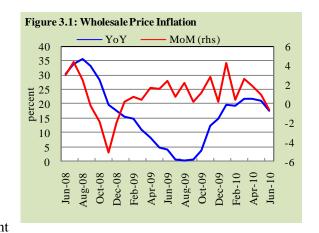

Further division of non-services sector into durable items and non-durable items indicates that inflation on both YoY and MoM basis in durable items increased when compared with the previous month and the same month of last year. On the other hand, inflation (YoY) in non-durable items declined in June 2010 compared to May

2010, it was still higher than June 2009 levels. On MoM basis, last month's deflation in non-durable items has turned into inflation this month.

# 3. Wholesale Price Index

Inflation measured by wholesale price index (WPI), dropped to 17.6 percent YoY during June 2010 from 21.2 percent in May 2010; however, it was substantially higher than 4.1 percent registered in the same month last year. On month on month basis, WPI inflation recorded a deflation of 0.6 percent

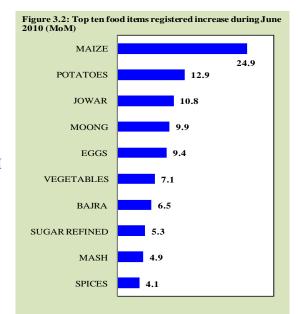

during the month compared to 0.9 percent inflation seen last month (see **Figure 3.1 & Table 3.1**).

<b>Table 3.1: V</b>	WPI Inflation	Trends								
	Overall	Food	Non-food	Raw materials	Fuel, lighting & lubricants	Manufact ures	Building materials			
	Month on Month									
Jun-09	2.4	1.1	3.5	-0.5	8.2	0.0	0.3			
Apr-10	1.8	0.8	2.69	4.1	2.1	1.8	7.3			
May-10	0.9	0.1	1.44	3.3	-0.6	3.3	1.8			
Jun-10	-0.6	1.2	-1.99	0.3	-4.0	-0.8	-0.4			
				Year on Year						
Jun-09	4.2	10.2	-0.3	11.9	-4.0	3.2	-10.1			
Apr-10	22.0	15.2	27.71	49.3	32.4	17.8	7.8			
May-10	21.2	14.4	26.90	49.2	26.9	20.5	13.9			
Jun-10	17.6	14.5	20.14	50.5	12.6	19.5	13.2			

Out of 106 composite items included in WPI basket, prices of 50 items declined or remained unchanged during the month whereas, prices of 47 items registered subdued inflation<sup>2</sup>. Five items recorded moderate inflation<sup>3</sup> whereas only four commodities registered double-digit prices increase during June 2010 on MoM basis (see **Annexure**).

# **Food Group**

Although overall WPI inflation (YoY) declined during the month under review but food inflation remained strong, registering 14.5 percent YoY growth compared to 14.4 percent in May 2010.

<sup>&</sup>lt;sup>2</sup> less than 5.0 percent

<sup>&</sup>lt;sup>3</sup> 5 to 10 percent

Similarly, on MoM basis WPI food inflation recorded 1.2 percent growth compared to 0.1 percent in May 2010 (see **Table 3.1**).

# **Non-food Group**

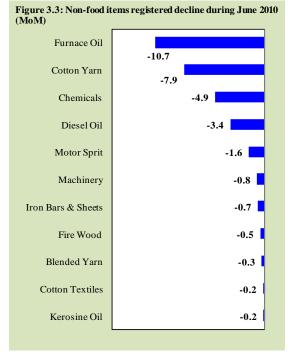

Inflation in WPI non-food group declined sharply during June 2010 largely due to decline in administered fuel prices. Ease in raw cotton prices and imposition of regulatory duty on yarn export played significant role in bringing the yarn and textile

prices down in the local market (see **Figure 3.3**).

WPI non- food inflation (YoY) fell to 20.1 percent from 26.9 percent in May 2010, whereas on MoM basis, WPI recorded a deflation of 2.0 percent during June 2010 compared to 1.4 percent inflation last month (see **Table 3.1**).

Further classification of non-food items reveals that raw material was the only group which recorded inflation, rest of the sub-groups witnessed deflation during the month on MoM basis (see **Table 3.1**).

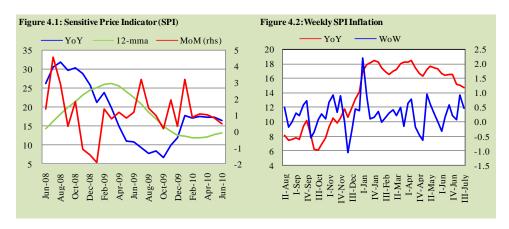

Slow economic activity in the domestic economy and uncertain global economic situation resulted

in subdued exports amid poor spending of domestic consumer. Due to these fears investors involved in construction and real-estate have adopted wait and see policy, whereas the industry people have reduced their production capacity and output due to lack of appropriate industrial policy.

# 4. Sensitive Price Indicator

Similar to other measures of inflation, SPI inflation also eased during June 2010 mainly due to decline in prices of non-food items. SPI inflation (YoY) was 16.5

percent during June 2010 compared to 17.4 percent witnessed last month (see **Figure 4.1**).

Weekly SPI inflation (YoY) declined sharply during the first three weeks of July 2010 reaching 14.6 percent in the third week (see **Figure 4.2**).

# **5 Global Commodity Prices**

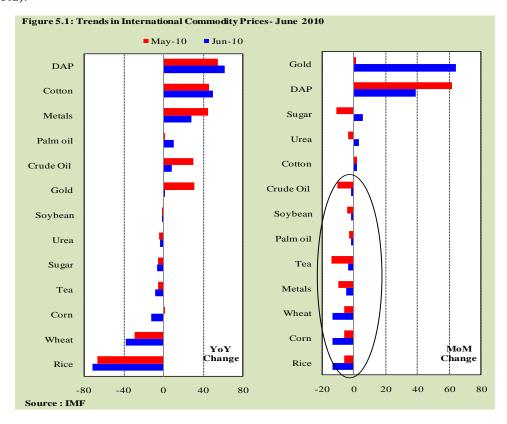

#### **5.1 Overview**

Commodity prices in international markets remained subdued during June 2010 due to uncertain position of economic recovery. Fiscal and monetary tightening in China and sovereign debt concerns in Europe were the major factors leading to uncertainty and pushing commodity prices lower compared to the previous month levels.

IMF commodity prices index registered a decline of 1.8 percent during June 2010 on MoM basis, a little better than a decline of 7.5 percent witnessed during the last month (see **Table 5.2**).

#### 5.2 Food Group

Similar to overall situation, prices of food commodities also remained under downward pressures during June 2010 as indicated by World Bank's food index which declined by 0.6 percent on MoM basis and 7.7 percent on YoY basis (see **Table 5.1**).

Largest decline was seen in grains prices mainly on account of favorable production outlook and active selling by major producers.

Edible oils, was the second subgroup in food which recorded decline during June 2010. Soybean prices declined on upward revision to Brazil and US soybean crops. Palm oil prices also declined on ample supplies amid weak demand.

Beverages index recorded positive growth during June 2010 due to sharp increase in coffee prices. Growth in world tea prices also remained negative during June 2010.

(\*) consists of various kinds of tea and coffee

Sugar prices after falling for four consecutive months, increased during June 2010 due to strong demand from key consumers including China, Pakistan, and Philippines (see **Table 5.1**).

# 5.3 Non-food group

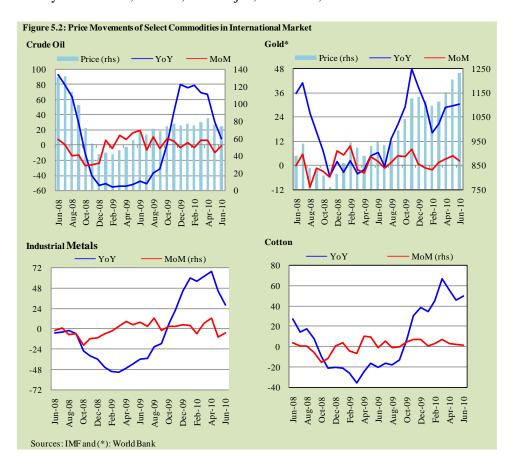

Among non food commodities, industrial metals prices declined due to weak demand amid increased production of major metals. Crude oil prices declined on weak global macroeconomic outlook. Even the rising oil demand<sup>4</sup> particularly in US and China could not mitigate the impact of large supplies. Crude stocks are rising worldwide particularly in US due to increased

Table 5.2 : Mor	Table 5.2 : Monthly Changes in Non-Food Indices

<sup>&</sup>lt;sup>4</sup> World oil demand increased by 2.8 percent in second quarter of 2010.

refinery output (see Figure 5.2 & Table 5.1).

Crude oil prices declined to US\$ 74.7<sup>5</sup> per barrel in June 2010 from US\$ 75.6 in the previous month (see **Figure 5.2**). Declined in Europe's oil demand is likely to be compensated with rise in demand from non-OECD countries mainly China, India, the middle east, and Latin America. Moreover, non-Opec supply forecast is also to rise mainly from Brazil, Canada, Azerbaijan, Colombia, and Kazakhstan.

<sup>&</sup>lt;sup>5</sup> average spot price of Brent, Dubai and West Texas Intermediate, equally weighed

<sup>\*</sup> Crude Oil (petroleum), simple average of three spot prices; Dated Brent, West Texas Intermediate, and the Dubai Fateh

<sup>#</sup> Middling 1-3/32 inch staple, Liverpool Index "A", average of the cheapest Cts/lb five of fourteen styles, CIF Liverpool (Cotton Outlook, Liverpool). From January 1968 to May 1981 strict middling 1-1/16 inch staple. Prior to 1968, Mexican 1-1/16. 2/

<sup>@</sup> World bank commodity index for low and middle income countries

#### Annexure B

#### **Technical Notes**

1. All the three measures of inflation, viz. CPI, WPI and SPI are computed by the following Laspeyres Index formula:

$$I_t = \sum_j w_0^j \left( \frac{P_t^j}{P_0^j} \right)$$

where  $I_t$  is price index,  $w_0^j$  is weight of commodity j in the overall basket,  $P_t^j$  is price of commodity j in period t and  $P_0^j$  is its price in the base year.

- 2. Base year for all the indices is the year 2000-01.
- 3. CPI basket contains 374 consumers' goods; WPI basket contains 425 commodities; SPI contains 53 commodities.
- 4. YoY inflation is the percent change of an index in a given month over the index in the same month of the last year. It is computed as follows:

$$\pi_{t} = (\frac{I_{t}}{I_{t-12}} - 1) \times 100$$

5. Period average inflation is the percent change of the average index during the period from July to the given month of a fiscal year over the average index during the corresponding period of the last year. It is computed as follows:

$$\overline{\pi}_{t} = \left(\frac{\sum_{i=0}^{t-v} I_{t-i}}{\sum_{i=0}^{t-12-v} I_{t-12-i}} - 1\right) \times 100$$

where *v* is the serial number of the month of July of current fiscal year in a given time series.

6. Monthly inflation is the percent change of an index in a given month over the index in the preceding month. It is computed as follows:

$$\pi_{t} = (\frac{I_{t}}{I_{t-1}} - 1) \times 100$$

7. 12-month moving average inflation (Long-run trend inflation) is the percent change of 12-month moving average of a price index; it is computed as follows:

$$\widetilde{\pi}_{t} = \left(\frac{\sum_{i=0}^{11} I_{t-i}}{\sum_{i=0}^{11} I_{t-12-i}} - 1\right) \times 100$$

- 8. Core Inflation is defined as the persistent component of measured inflation that excludes volatile and controlled prices. It reflects the normal supply and demand conditions in the economy. Core inflation is computed by the following two methods:
  - a) Non-food, Non-energy inflation (NFNE inflation); it is computed by excluding food group and energy items (kerosene oil, petrol, diesel, CNG, electricity and natural gas) from the CPI basket.
  - b) 20% trimmed-mean inflation; it is computed through the following steps:
    - i. All CPI items are arranged in ascending order according to YoY/12-month moving average/monthly/period average changes in their price indices in a given month.
    - ii. 20 percent of the items showing extreme changes are excluded with 10 percent of the items at the top of the list (corresponding to cumulative weight of 90% or more) and 10 percent of the items at the bottom of the list (corresponding to cumulative weight of 10 percent or less).
    - iii. The weighted mean of the changes in price indices of the rest of the items is core inflation.
- 9. Weighted contribution of different items (or sub-groups) to total inflation is worked out as below:

Let the overall index  $(I_t)$  is the weighted average of price indexes of individual items or sub-groups  $(I_{it})$ , i.e.

$$I_{t} = \sum_{i} w_{i} \cdot I_{it}$$

The weighted contribution of a single item (or a sub-group) to overall inflation is defined as below:

$$C_{it} = \alpha_{it-12} \cdot w_i \cdot \left(\frac{\pi_{it}}{\pi_t}\right)$$

Where  $C_{ii}$ : Contribution of  $i^{th}$  item to the overall inflation

 $\alpha_{it-12} = \frac{I_{it-12}}{I_{t-12}}$ ; i.e. ratio of item's index to overall index in

the reference month

 $W_i$ : Weights of i<sup>th</sup> item

 $\pi_{it}$ : Inflation of i<sup>th</sup> item

 $\pi_t$ : Overall inflation
