Review

Inflation in Brief

1. Headline CPI inflation (2007-08=100) is recorded at 7.7 percent on year-on-year basis in October 2012 as compared to 8.8 percent in the previous month and 11.0 percent in the corresponding month of last year.
2. CPI inflation on month-on-month basis is recorded at 0.4 percent in October 2012 as compared to 0.8 percent in the previous month and 1.4 percent in the corresponding month of last year. Seasonally adjusted month-on-month CPI inflation decreased to 0.2 percent in October 2012 as compared to 0.7 percent in the previous month.
3. Core inflation (trimmed) on year-on-year basis decreased to 9.7 percent in October 2012 as compared to 10.4 percent in the previous month and it was 11.7 percent in the corresponding month of last year.
4. On month-on-month basis, the Core inflation (trimmed) increased to 0.7 percent in October 2012 as compared to 0.5 percent in previous month. It was 1.0 percent in the corresponding month of last year.
5. Non-food, non-energy inflation measured by CPI Core (NFNE) on year-on-year basis decreased to 10.2 percent in October 2012 as compared to 10.5 percent in the previous month as well as in the corresponding month of last year.
6. Core NFNE inflation on month-on-month basis increased to 1.2 percent in October 2012 when compared to 0.4 percent a month earlier. The rate of change in Core NFNE in October 2011 was 1.4 percent.
7. WPI inflation on year-on-year basis decreased to 7.5 percent in October 2012 when compared to 7.8 percent a month earlier. During October 2011, WPI inflation was recorded at 15.4%.

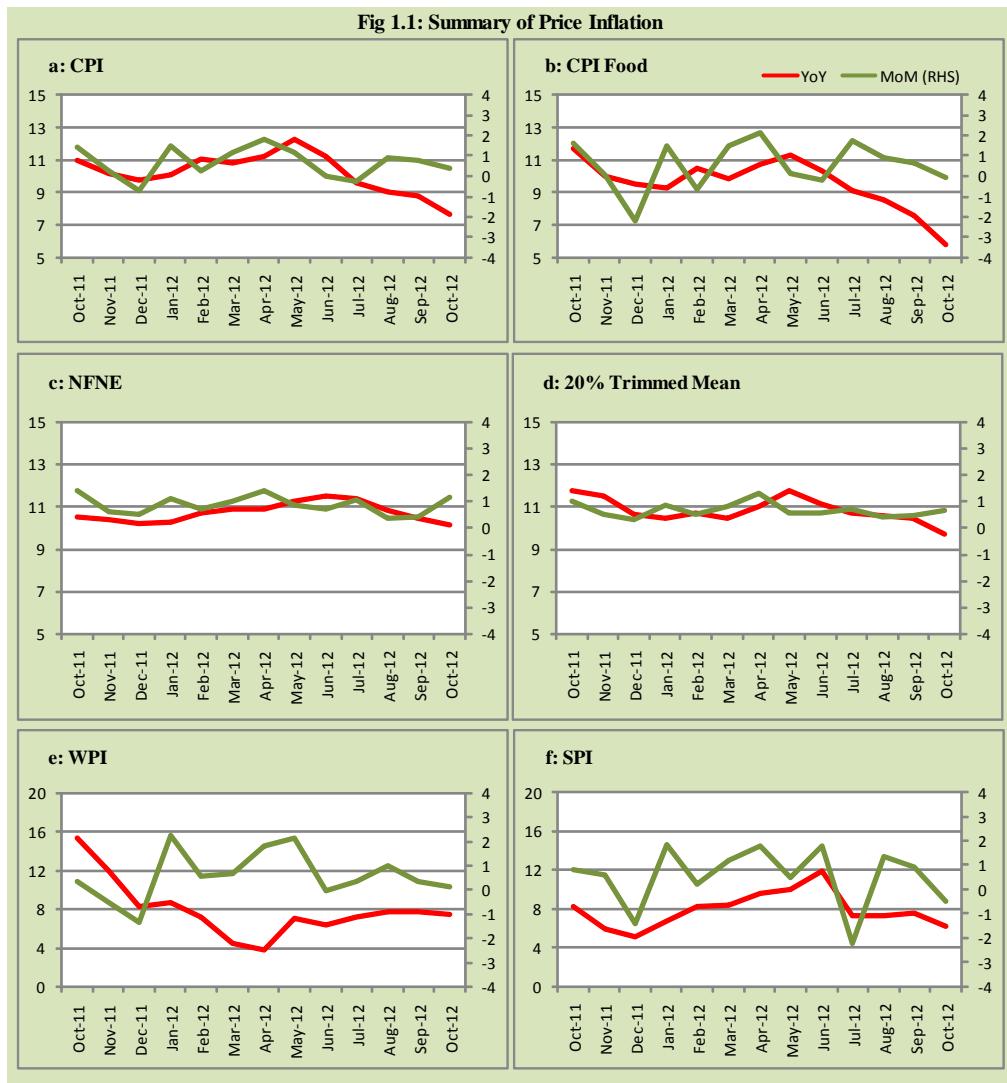

8. WPI inflation on month-on-month basis decreased to 0.1 percent in October 2012 as compared to 0.3 percent a month earlier. It was 0.4 percent in October 2011.
9. SPI inflation on year-on-year basis decreased to 6.2 percent in October 2012 as compared to 7.5 percent in the previous month. It was 8.2 percent in the corresponding month of last year.
10. SPI inflation on month-on-month basis is recorded at -0.5 percent in October 2012 as compared to 0.9 percent a month earlier and 0.8 percent in October 2011.

Inflation Monitor, October 2012

2. City wise Inflation

CPI Inflation on year-on-year basis in federal and provincial capitals of Pakistan showed mix trend during October 2012. Among these five cities, the lowest inflation was observed in Peshawar which is 5.3 percent while the highest inflation was observed in Islamabad and Quetta at 8.0 percent (Table A6 of annexure-A).

Table 2.1 City-wise Inflation of Selected Cities (percent)

	Oct-11		Sep-12		Oct-12	
	MoM	YoY	MoM	YoY	MoM	YoY
Overall CPI	1.4	11.0	0.8	8.8	0.4	7.7
Islamabad	0.9	9.5	0.9	9.0	0.0	8.0
Karachi	1.7	11.0	1.7	8.6	0.6	7.5
Lahore	0.4	8.3	0.4	8.0	-0.1	7.5
Peshawar	1.8	9.7	1.0	7.2	0.0	5.3
Quetta	1.7	10.4	-0.1	8.7	1.0	8.0

3. Income Group wise Inflation

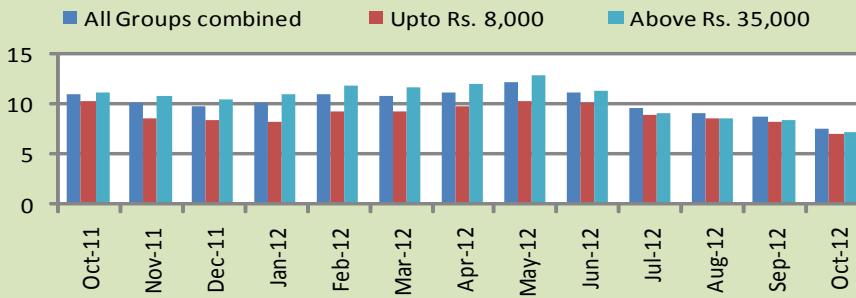

Income group- wise data showed that income group above Rs. 35,000 suffered higher inflation than the overall inflation in CPI basket during October 2012 for food group. The lowest income group (Up to Rs. 8, 000) has the lowest inflation in food group during the month of October 2012 (Table A7 of annexure-A).

Table 3.1 Income Group- wise Inflation (YoY)

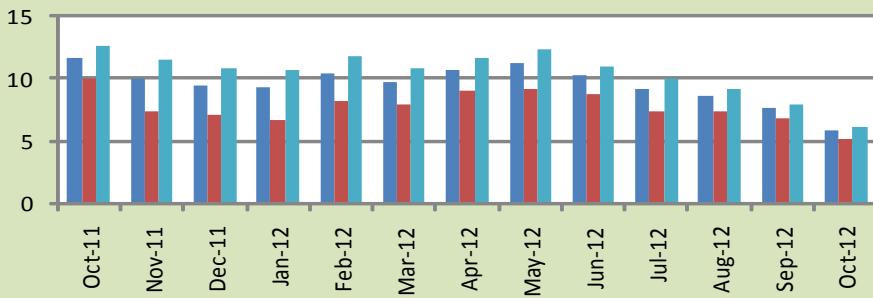

Income Groups	General			Food			Non-food		
	Oct-11	Sep-12	Oct-12	Oct-11	Sep-12	Oct-12	Oct-11	Sep-12	Oct-12

4. Weighted Contribution

The weighted contribution of food group in the overall inflation decreased to 32.26 percent during October 2012 from 36.69 percent in September 2012. It was 45.19 percent in October 2011.

The weighted contribution of non-food group showed increase to touch 67.74 percent in October 2012 from 63.31 percent in September 2012.

8. Seasonal Adjustment in CPI

Seasonal adjustment is the process of estimating and removing the seasonal effects from a time series after decomposing it into seasonal, trend, cycle and irregular components. The purpose is to identify the different components of the time series and thus provide a better understanding of its underlying behavior. Seasonally adjusted changes are usually preferred for analyzing general price trends in the economy because they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year. Various statistical methods can be used to decompose a time series into its constituent components. The State Bank of Pakistan uses X-12- ARIMA Seasonal Adjustment Method for this purpose.

The changes in consumer prices are normally reported in terms of year-on-year and month-on-month basis. Seasonal adjustment is particularly useful for analyzing month-on-month changes. The monthly data series of Consumer Price Index (CPI) from July 2008 to October 2012 has been used for seasonal adjustment analysis. The seasonal analysis is carried out without taking trading-day or Islamic calendar month's effects.

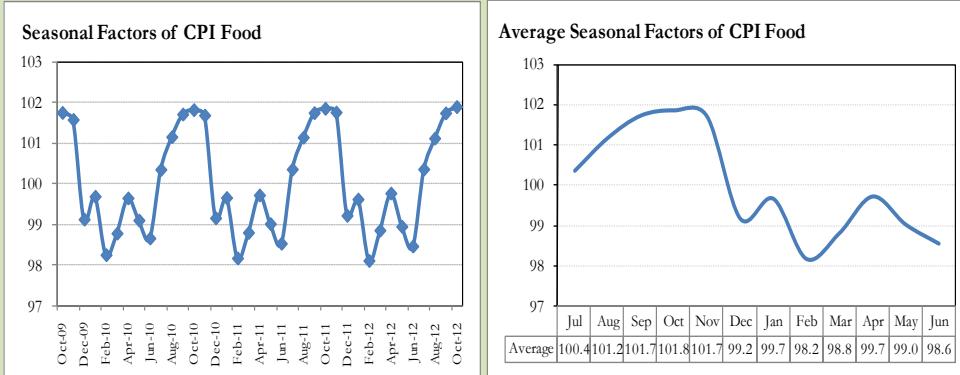

Figure 8.1 reveals that seasonality in CPI has been increasing over the period of last four years. Average seasonal factors reveal strong seasonality during the calendar year. There is an upward seasonality during the months from July to November & April and downward seasonality in the remaining months of the year. Upward and downward seasonality is above and below the trend line respectively. It is important to note that seasonal factors are estimates based on present and past experience and that future data may not necessarily show the same pattern of seasonal factors.

Fig. 8.1 Seasonal Factors of CPI

Note: Data Available in Annex Table 16.

Fig. 8.2 Seasonal Factors of CPI Food

Note: Data Available in Annex Table 17.

Figure 8.3 & 8.4 shows that seasonally adjusted series are relatively smoother than the original series due to the removal of the seasonal variations. The trend follows the long-term movement in original series, and is smoother than the original series because some irregular fluctuations have been removed.

Fig. 8.3 Seasonal Plots of CPI

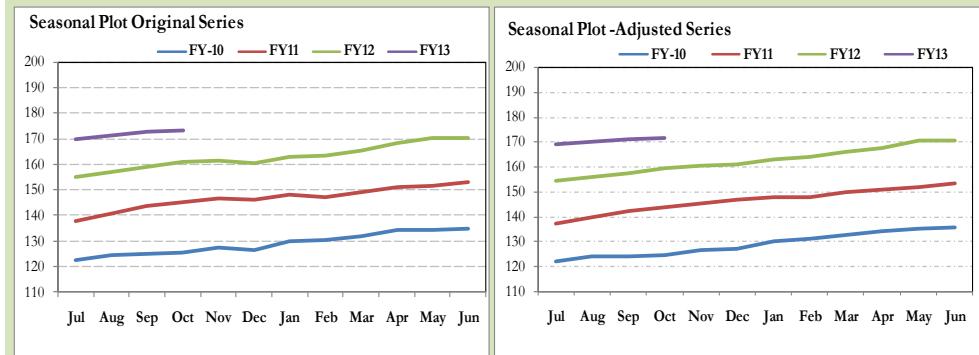

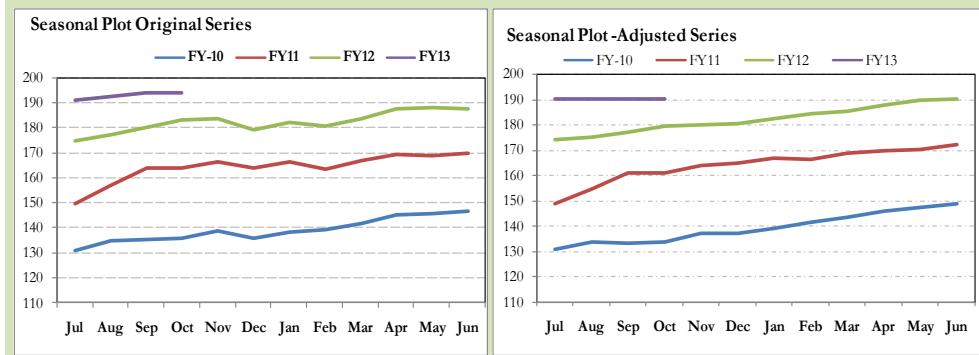

Fig. 8.4 Seasonal Plots of CPI (Food)

Seasonally adjusted CPI for October 2012 stood at 171.55 against 173.10 in original series showing a decrease of 1.55 on account of adjustment of upward seasonality in October 2012.

Seasonally adjusted CPI food group for October 2012 stood at 190.03 against 193.66 in original series showing a decrease of 3.63 on account of adjustment of upward seasonality in October 2012.

Month-on-month change of seasonally adjusted CPI series stood at 0.16% reflecting increase during October 2012 over September 2012 and an increase of 0.38% in original series.

Month-on-month change of seasonally adjusted CPI food group series stood at -0.22% reflecting decrease during October 2012 and a decrease of 0.07% in original series.

It is important to note that inflation rates should be analyzed on the basis of seasonally adjusted rates. This is especially needed for inflation rates on month-on-month basis. The most recent annual rate of inflation is usually indicated by annualizing the seasonally adjusted month-on-month rate. Annualized rate of CPI inflation in October 2012 (corresponding to the seasonally adjusted month-on-month rate) is 1.96 percent.

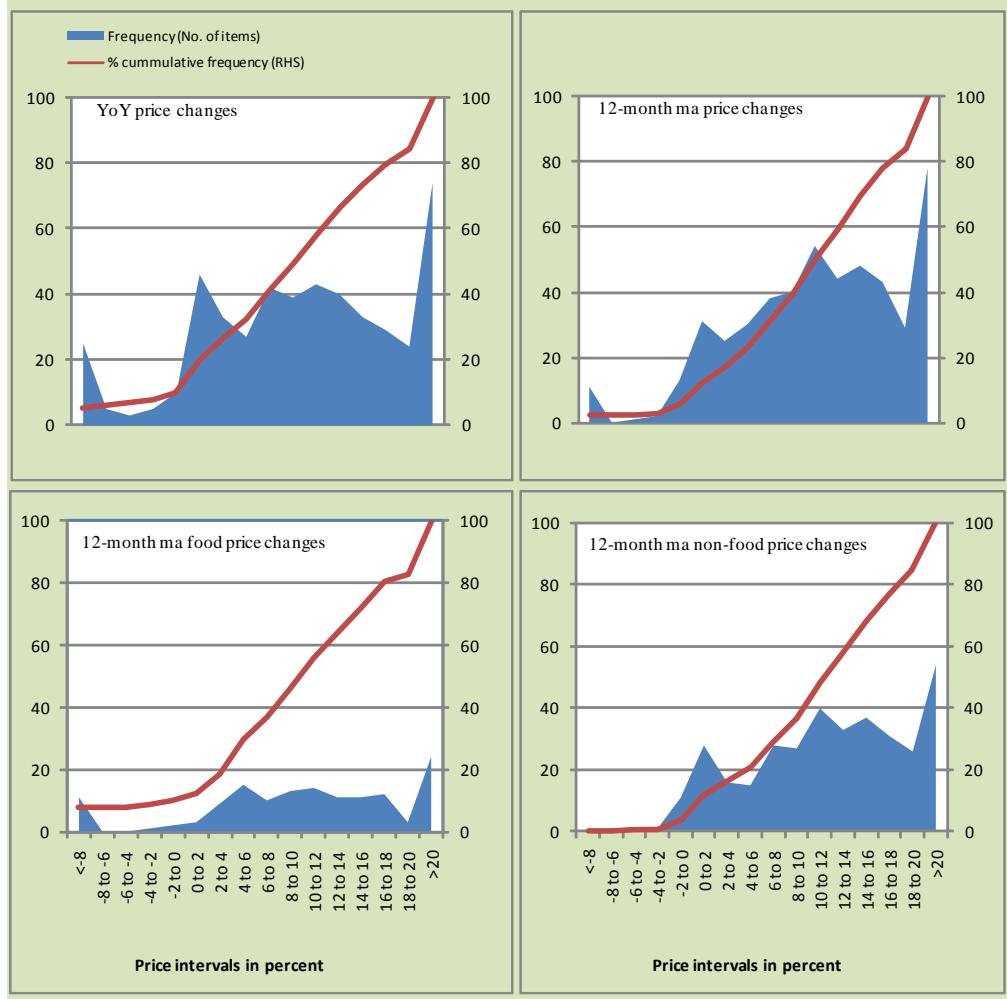

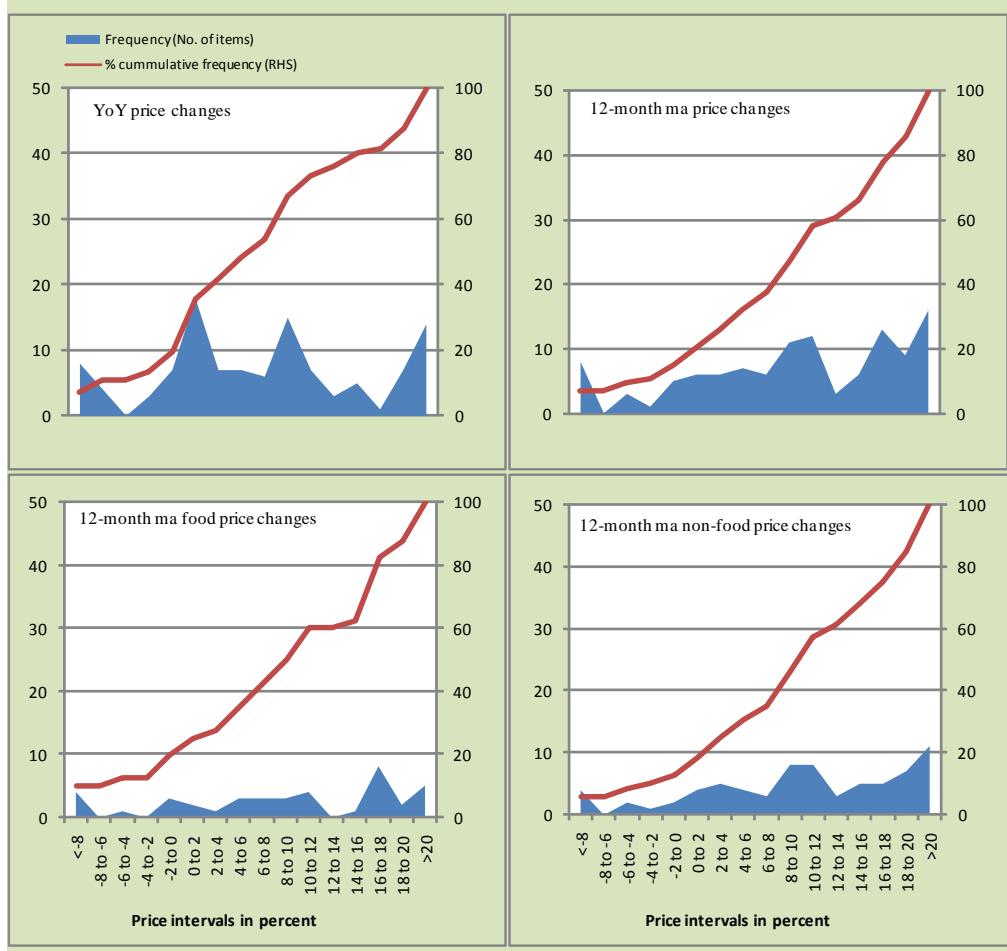

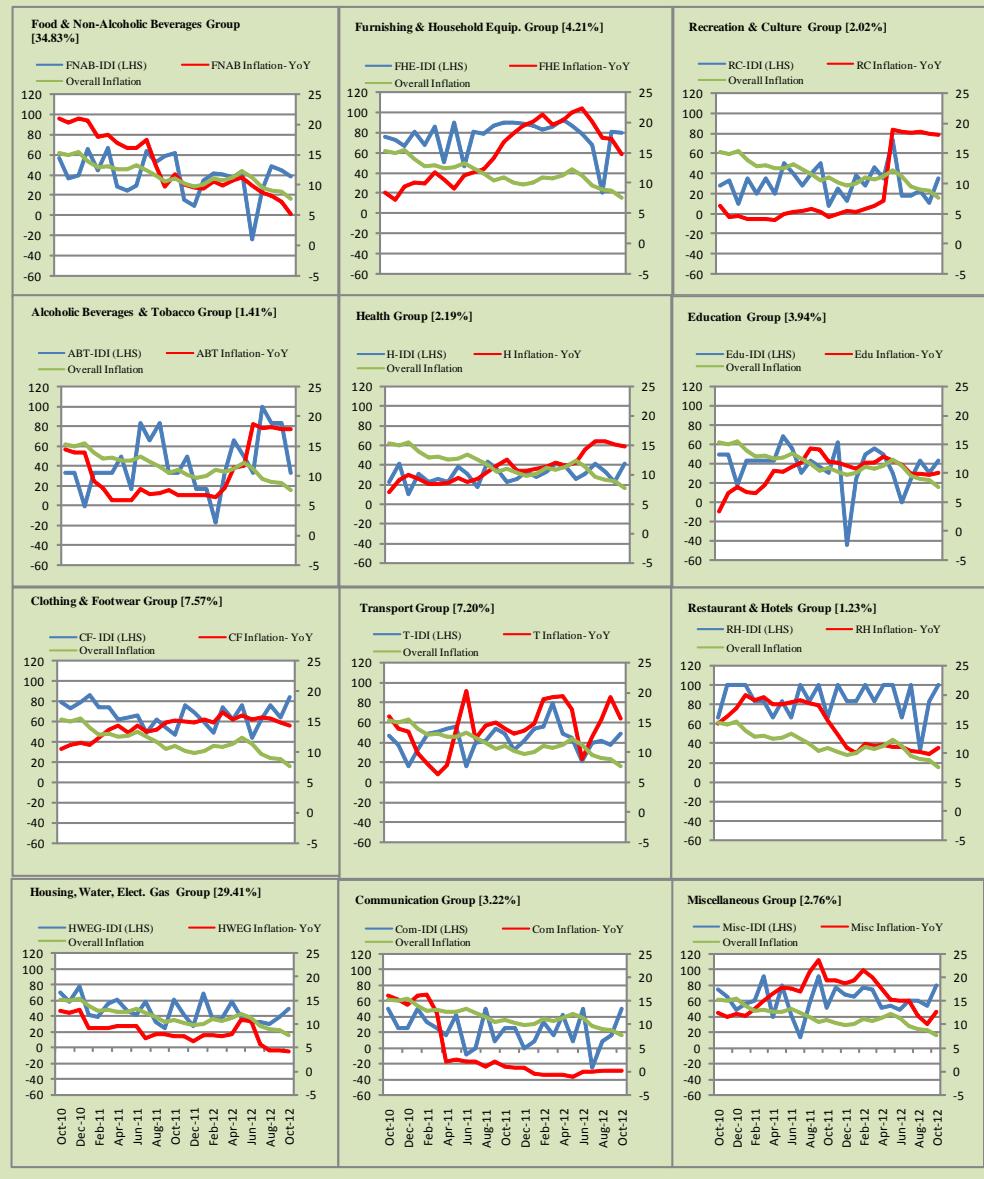

Figure A3: Frequency Distribution of Price Changes of WPI Commodities, October 2012

Inflation Monitor, October 2012

Figure A4: Group- wise Inflation Diffusion Index (IDI) and Respective/ Overall YoY Inflation (percent)

Annexure B

Technical Notes

1. All the three measures of inflation, viz. CPI, WPI and SPI are computed by the following Laspeyres Index formula:

$$I_t = \sum_j w_0^j \left(\frac{P_t^j}{P_0^j} \right)$$

Where I_t is price index, w_0^j is weight of commodity j in the overall basket, P_t^j is price of commodity j in period t and P_0^j is its price in the base year.

2. Base year for all the indices is the year 2007-08.
3. CPI basket contains 487 consumers' goods; WPI basket contains 463 items; SPI contains 53 items.
4. YoY inflation is the percent change of an index in a given month over the index in the same month of the last year. It is computed as follows:

$$\pi_t = \left(\frac{I_t}{I_{t-12}} - 1 \right) \times 100$$

5. Period average inflation is the percent change of the average index during the period from July to the given month of a fiscal year over the average index during the corresponding period of the last year. It is computed as follows:

$$\bar{\pi}_t = \left(\frac{\sum_{i=0}^{t-v} I_{t-i}}{\sum_{i=0}^{t-12-v} I_{t-12-i}} - 1 \right) \times 100$$

Where v is the serial number of the month of July of current fiscal year in a given time series.

6. Monthly inflation is the percent change of an index in a given month over the index in the preceding month. It is computed as follows:

$$\pi_t = \left(\frac{I_t}{I_{t-1}} - 1 \right) \times 100$$

7. 12-month moving average inflation (Long-run trend inflation) is the percent change of 12-month moving average of a price index; it is computed as follows:

$$\tilde{\pi}_t = \left(\frac{\sum_{i=0}^{11} I_{t-i}}{\sum_{i=0}^{11} I_{t-12-i}} - 1 \right) \times 100$$

8. Core Inflation is defined as the persistent component of measured inflation that excludes volatile and controlled prices. It reflects the normal supply and demand conditions in the economy. Core inflation is computed by the following two methods:
- Non-food, Non-energy inflation (NFNE inflation); it is computed by excluding food group and energy items (kerosene oil, petrol, diesel, CNG, electricity and natural gas) from the CPI basket.
 - 20% trimmed-mean inflation; it is computed through the following steps:
 - All CPI items are arranged in ascending order according to YoY/12-month moving average/monthly/period average changes in their price indices in a given month.
 - 20 percent of the items showing extreme changes are excluded with 10 percent of the items at the top of the list (corresponding to cumulative weight of 90% or more) and 10 percent of the items at the bottom of the list (corresponding to cumulative weight of 10 percent or less).
 - The weighted mean of the changes in price indices of the rest of the items is core inflation.
9. Weighted contribution of different items (or sub-groups) to total inflation is worked out as below:

Let the overall index (I_t) is the weighted average of price indexes of individual items or sub-groups (I_{it}), i.e.

$$I_t = \sum_i w_i \cdot I_{it}$$

The weighted contribution of a single item (or a sub-group) to overall inflation is defined as below:

$$C_{it} = \alpha_{it-12} \cdot w_i \cdot \left(\frac{\pi_{it}}{\pi_t} \right)$$

Where C_{it} : Contribution of i^{th} item to the overall inflation

$\alpha_{it-12} = \frac{I_{it-12}}{I_{t-12}}$; i.e. ratio of item's index to overall index in the reference month

w_i : Weights of i^{th} item

π_{it} : Inflation of i^{th} item

π_t : Overall inflation

10. Annualized rate of inflation (based on a month-on-month rate π) is computed as follows

$$\text{Annualized } \pi = ((1 + \frac{\pi}{100})^{12} - 1) \times 100$$

Methodology for Estimating Inflation Diffusion Index for Pakistan

We constructed an index to measure the spread of inflation in the 487 commodities of the CPI basket. It is based on month-on-month (MoM) change in the prices of these commodities and can be obtained by estimating what is known as an ‘inflation diffusion index’ (IDI) as below:

$$\frac{\text{Number of Commodities with } \uparrow \text{ in MoM change} - \text{Number of Commodities with } \downarrow \text{ in MoM change}}{\text{Number of Commodities for which prices are reported}}$$

Thus, it is the difference between the share of items with increasing prices (i.e. depicting inflation) and the share of items with falling prices (i.e. depicting deflation) in CPI amongst the commodities for which prices have altered or remained constant¹.

Based upon commodity level price data from July 2001 to February 2011 we computed inflation diffusion indices overall (general) CPI basket and for all groups in CPI basket (except House Rent Index being single item). A simple analysis² suggests that IDI is a leading indicator for Pakistan’s YoY inflation.

¹ We do not observe the prices of certain commodities (like the seasonal items) during certain periods of time. To calculate the inflation diffusion index we consider the commodities for which prices have been reported (irrespective of changed or not) during the month under review.

² Formal test shows one way ‘Granger’ causality from IDI to YoY inflation.
