Data Support

We are thankful to Pakistan Bureau of Statistics (PBS) for data support

1. Inflation in Brief

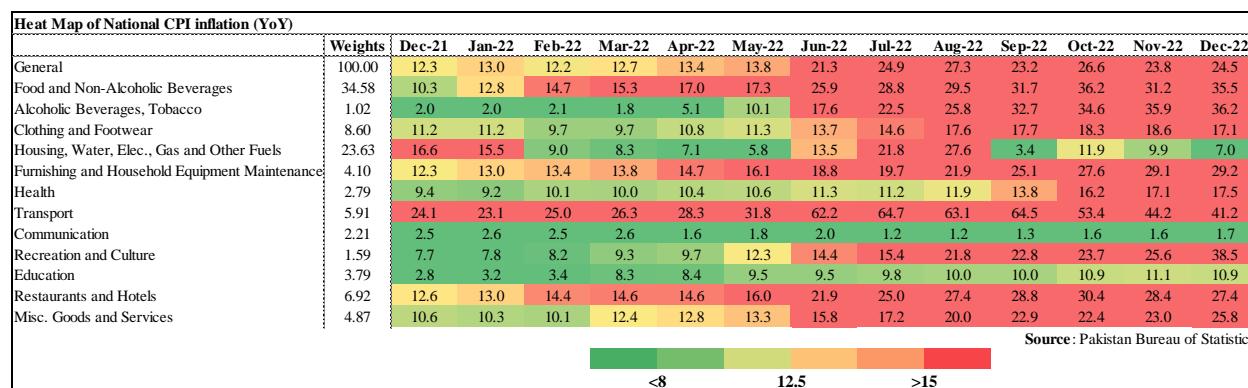

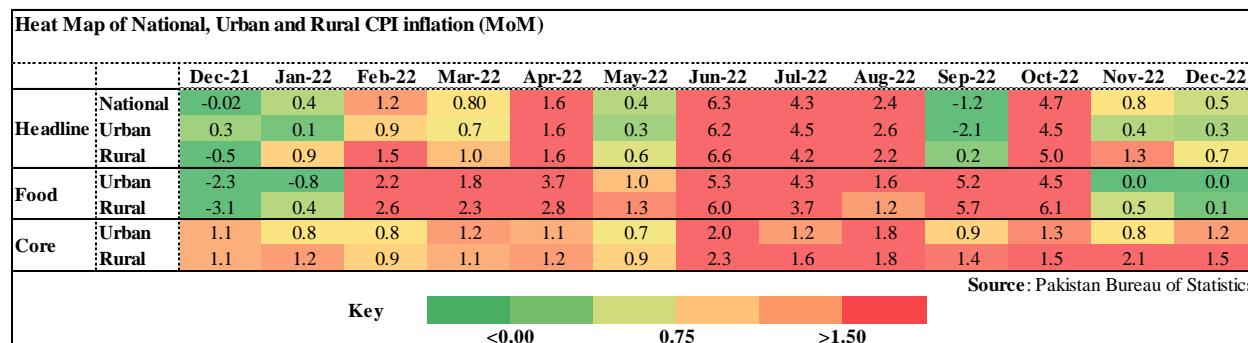

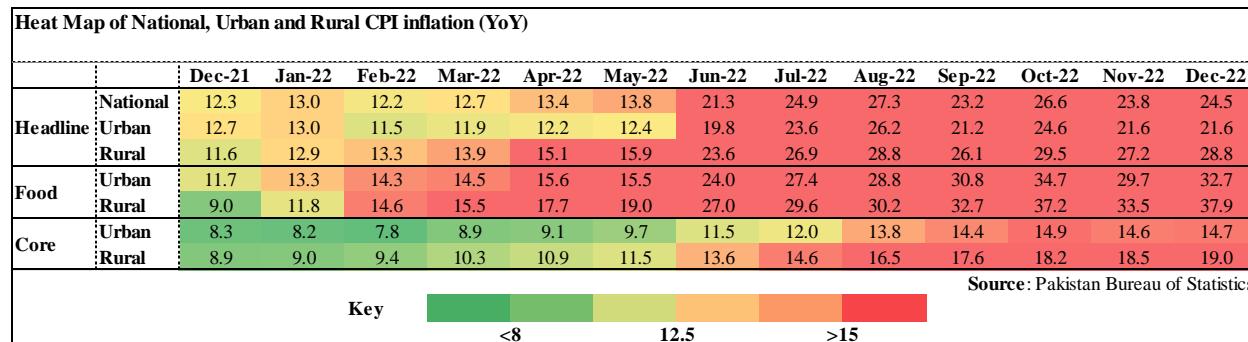

- I. National CPI Inflation on year-on-year (YoY) basis increased to 24.5 percent in December 2022 from 23.8 percent in previous month. It stood at 12.3 percent in the corresponding month of last year. On month-on-month (MoM) basis, National CPI Inflation decreased to 0.5 percent in December 2022 from 0.8 percent in previous month. A deflation of 0.02 percent was observed during corresponding month of last year.
- II. Urban CPI Inflation (YOY) increased to 21.59 percent in December 2022 from 21.56 percent in previous month. It stood at 12.7 percent during the corresponding month of last year. On MoM basis, Urban CPI Inflation decreased to 0.3 percent in December 2022 from 0.4 percent in the previous month. It stood at 0.3 percent during corresponding month of last year. Seasonally adjusted MoM CPI showed an inflation of 1.1 percent in December 2022 compared to an inflation of 0.4 percent in the previous month.
- III. Rural CPI Inflation (YoY) increased to 28.8 percent in December 2022 from 27.2 percent in previous month. It was recorded 11.6 percent during the corresponding month of last year. Rural CPI Inflation (on MoM basis) decreased to 0.7 percent in December 2022 from 1.3 percent in the previous month. A deflation of 0.5 percent was observed during corresponding month of last year. Seasonally adjusted (MoM) CPI showed an inflation of 1.7 percent in December 2022 as compared to an inflation of 1.1 percent in previous month.
- IV. Urban Core (Non-food, Non-energy (NFNE)) Inflation on YoY basis increased to 14.7 percent in December 2022 from 14.6 percent in previous month. It stood at 8.3 percent during corresponding month of last year. On MoM basis, Urban Core (NFNE) Inflation increased to 1.2 percent in December 2022 from 0.8 percent in previous month. It stood at 1.1 percent during the corresponding month of last year.
- V. Rural Core (Non-food, Non-energy (NFNE)) Inflation on YOY basis increased to 19.0 percent in December 2022 from 18.5 percent in previous month. It stood at 8.9 percent during the corresponding month of last year. On MoM basis, it decreased to 1.5 percent in December 2022 from 2.1 percent in previous month. It was recorded 1.1 percent during the corresponding month of last year.
- VI. Urban Core Inflation (trimmed) on YoY basis decreased to 19.4 percent in December 2022 from 19.8 percent in previous month. It stood at 10.8 percent during the corresponding month of last year. On MoM basis, Urban Core Inflation (trimmed) increased to 0.8 percent in December 2022 from 0.5 percent in previous month. It stood at 1.1 percent during the corresponding month of last year.
- VII. Rural Core Inflation (trimmed) on YoY basis increased to 26.4 percent in December 2022 from 25.4 percent in previous month. It was recorded 10.3 percent during the corresponding month of last year. On MoM basis, Rural Core Inflation (trimmed) decreased to 1.5 percent in December

2022 from 1.8 percent in previous month. It stood at 1.0 percent during corresponding month of last year.

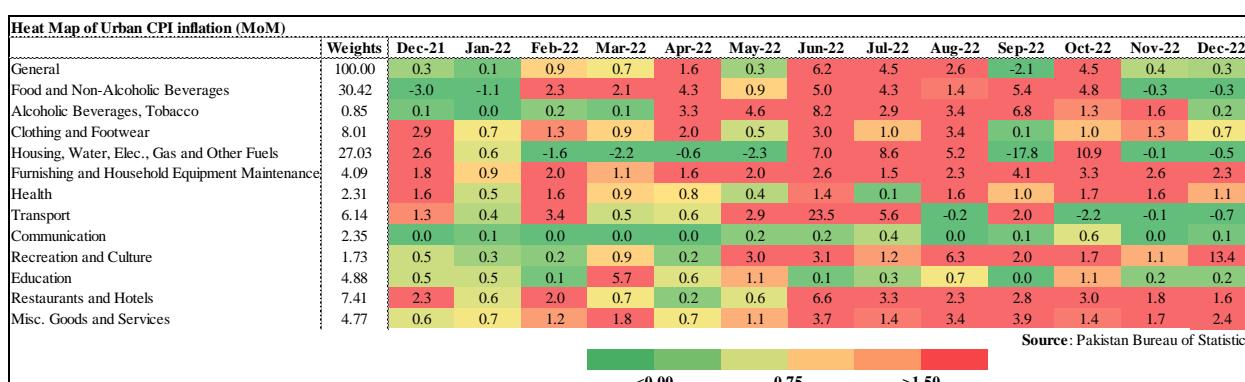

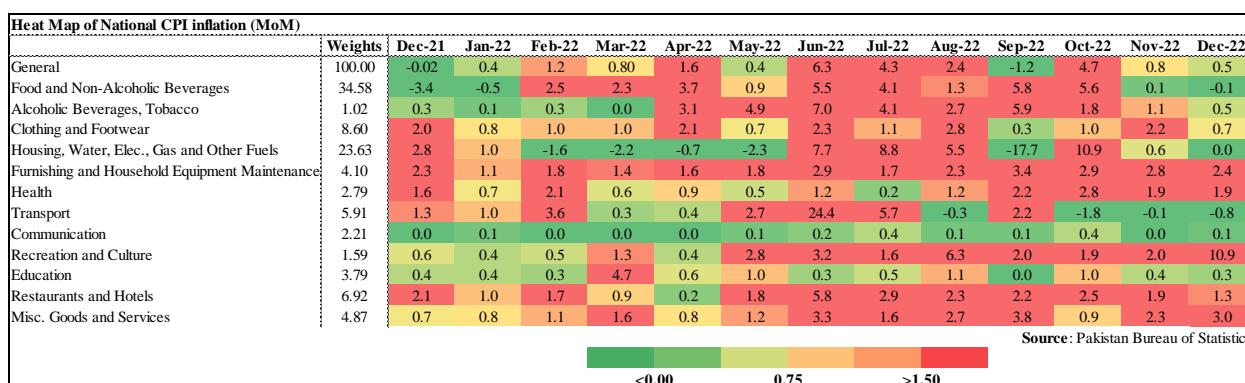

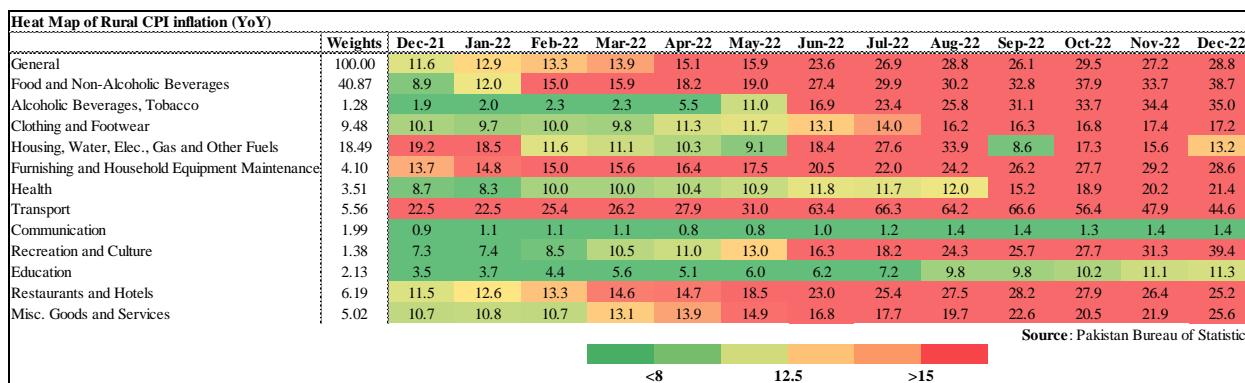

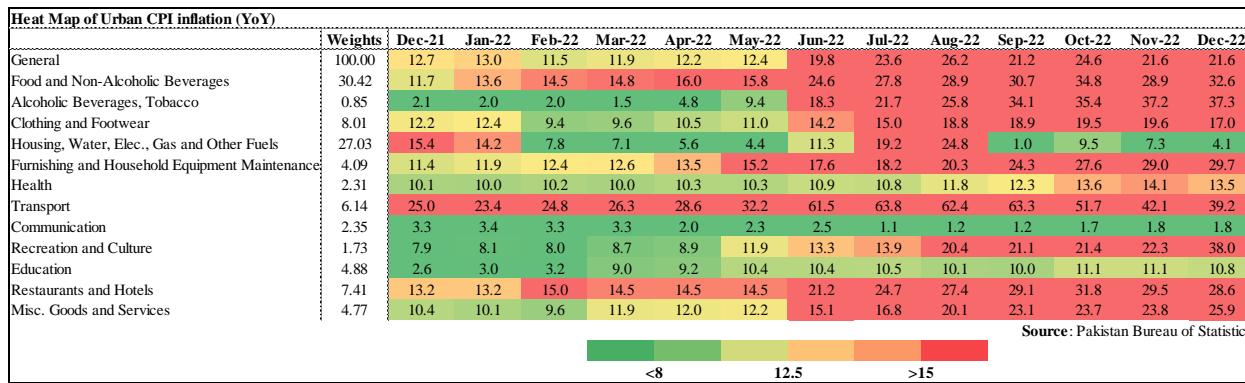

- VIII. WPI Inflation on YoY basis decreased to 27.1 percent in December 2022 from 27.7 percent in previous month. It stood at 26.2 percent during the corresponding month of last year. On MoM basis, a deflation of 0.7 percent is observed in December 2022 as compared to a deflation of 0.02 percent in previous month. A deflation of 0.2 percent was recorded during the corresponding month of last year.
- IX. SPI Inflation on YoY basis increased to 29.68 percent in December 2022 from 29.66 percent in previous month. During corresponding month of last year, SPI Inflation stood at 19.3 percent. On MoM basis, SPI inflation decreased to 0.3 percent in December 2022 from 4.9 percent in previous month. It stood at 0.3 percent during corresponding month of last year.

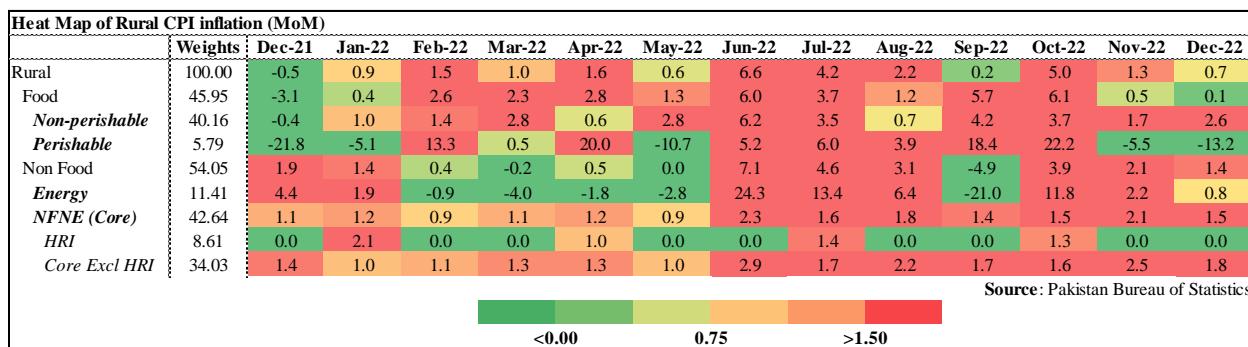

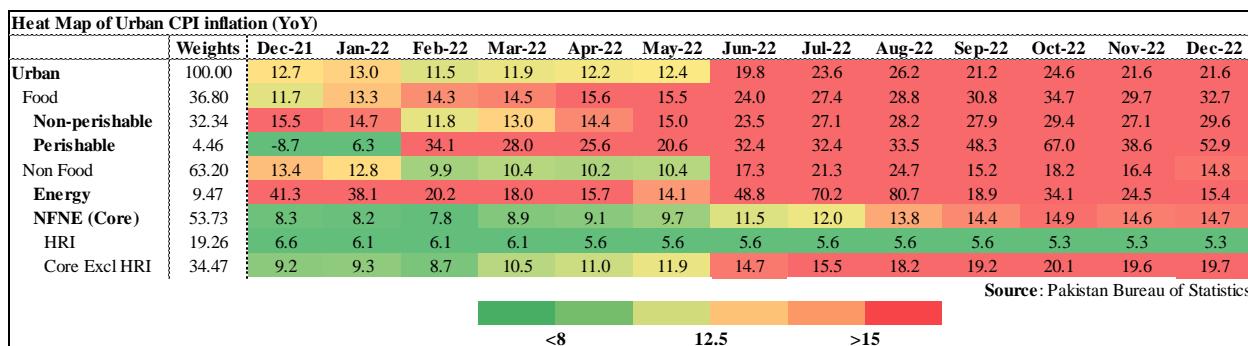

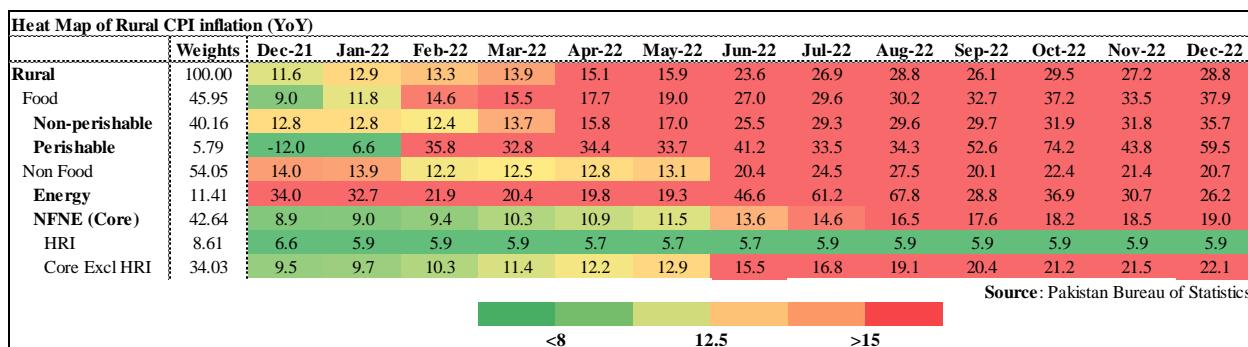

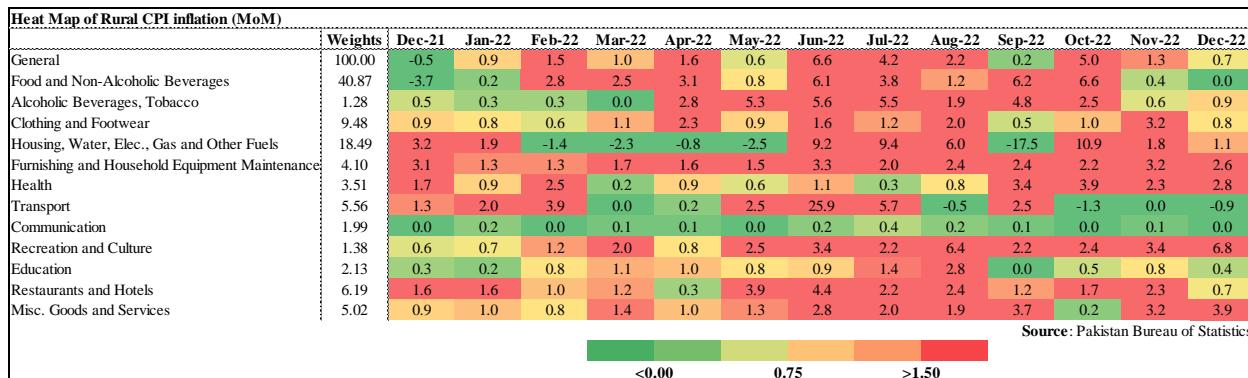

2. Heat Maps of CPI inflation

Heat map visually elaborates the evolution of inflation. A heat map for National, Urban and Rural CPI inflation (YoY and MoM) and their important sub-indices for the last thirteen months is presented. The observed inflation is compared with the benchmark inflation target of 11.5 percent¹ for FY23. Green areas indicate low inflation pressures whereas red areas indicate higher inflationary pressures.

6. Trends in Consumer Price Indices and Inflation

Monthly Consumer Price Indices, CPI inflation (YoY) and inflation build up over June along with seasonally adjusted (MoM) growth rates in CPI (National, Urban and Rural) is summarized in the following graphs (Figure 6.1 to 6.3).

7. Weighted Contribution

The weighted contribution of food group in the overall Urban CPI Inflation increased to 57.3 percent during December 2022 from 53.5 percent in previous month. It was 35.0 percent during corresponding month of last year. The weighted contribution of non-food group decreased to 42.7 percent in December 2022 from 46.6 percent in previous month. Weighted Contribution of non-food was 65.0 percent during corresponding month of last year. Table 7.1 provides the historical perspective of weighted contribution of food and non-food group and their respective sub-indices (Perishable food, Non-Perishable food, Energy, Core Inflation (NFNE), NFNE excluding HRI and HRI) in the overall inflation for urban basket.

For rural basket, the weighted contribution of food group in the overall Rural CPI Inflation increased to 61.9 percent during December 2022 from 59.4 percent in previous month. It was 37.2 percent during corresponding month of last year. The weighted contribution of non-food group decreased to 38.1 percent in December 2022 from 40.6 percent in previous month. Weighted contribution of non-food group was 62.8 percent during corresponding month of last year. Table 7.2 provides the historical perspective of weighted contribution of food (Perishable food, Non-Perishable food) and non-food group (Energy, Core Inflation (NFNE), NFNE excluding HRI and HRI) in the overall inflation for rural basket.

8. Inflation Diffusion Index

Inflation Diffusion Index (IDI) is the difference (MoM change) between the share of items with increasing prices (i.e. depicting inflation) and the share of items with falling prices (i.e. depicting deflation) in CPI basket for which prices have reported. IDI for urban and rural baskets is presented in Table 8.1(a & b) for the last thirteen months.

10. Inflation in Global Context

In global context, Pakistan's inflation in comparison with inflation in selected developed and emerging economies is given in figure 10.1 and 10.2.

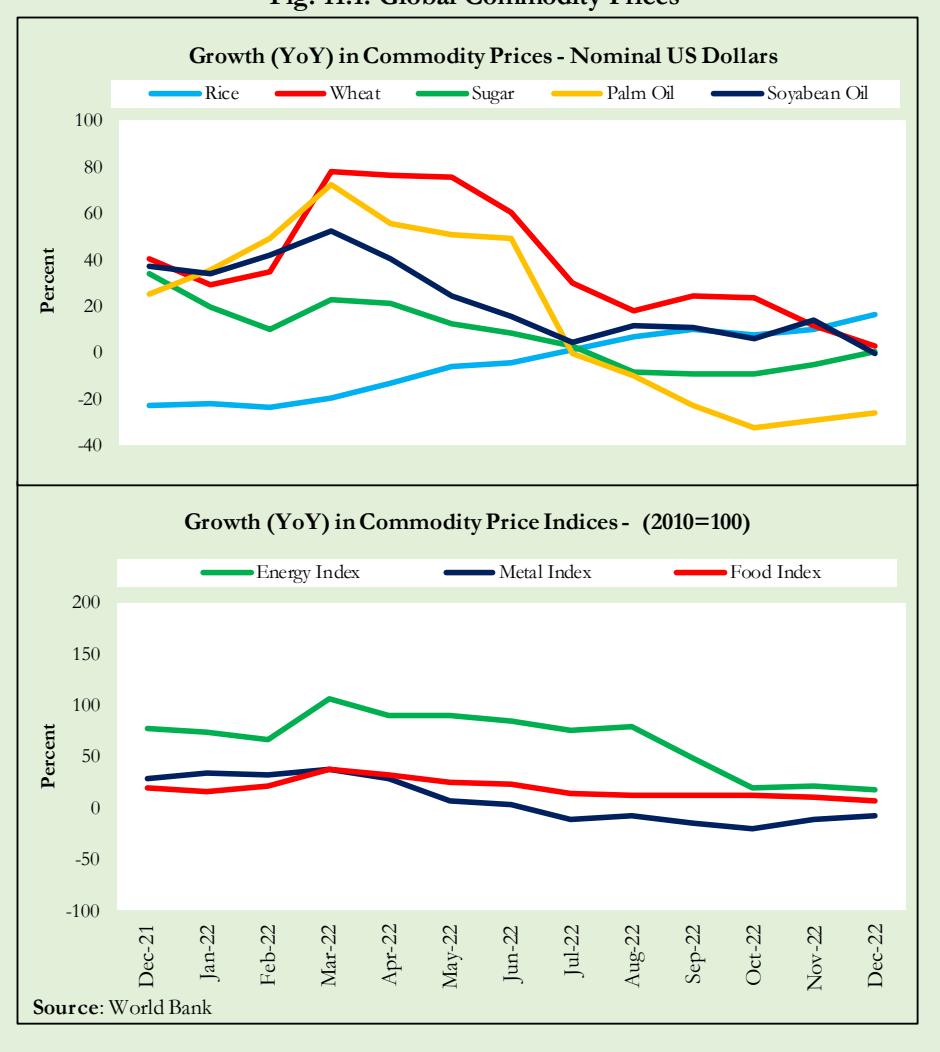

11. Global Commodity Prices (Growth)

Global commodity prices and various group indices have a relation with domestic inflation. In this context, changes in major global commodity prices and indices along with price trends are given in table 11.1 and figure 11.1.

12. Seasonal Adjustment in CPI

Seasonal adjustment is the process of estimating and removing the seasonal effects from a time series after decomposing it into seasonal, trend, cycle and irregular components. The purpose is to identify the different components of the time series and thus provide a better understanding of its underlying behavior. Seasonally adjusted changes are usually preferred for analyzing general price trends in the economy because these eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year. Various statistical methods can be used to decompose a time series into its constituent components. The State Bank of Pakistan uses X-12- ARIMA Seasonal Adjustment Method for this purpose.

The changes in consumer prices are normally reported in terms of year-on-year and month-on-month basis. Seasonal adjustment is particularly useful for analyzing month-on-month changes. The monthly data series of Consumer Price Indices (National CPI, Urban CPI and Rural CPI) from December 2008 to December 2022 has been used for seasonal adjustment analysis.

Figure 12.1 reveals that seasonality in all CPI series has been increasing over the period. Average seasonal factors reveal strong seasonality during the calendar year. There is an upward seasonality during the months from July to December and downward seasonality in the remaining months of the year. Upward and downward seasonality is above and below the trend line respectively.

Fig. 12.1 (a): Seasonal Factor of National CPI**Fig. 12.1 (b): Seasonal Factor of Urban CPI****Fig. 12.1 (c): Seasonal Factor of Rural CPI**

Figures 12.2 shows that seasonally adjusted series are relatively smoother than the original series due to the removal of the seasonal variations. The trend follows the long-term movement in original series and is smoother than the original series because some irregular fluctuations have been removed.

Fig. 12.2 (a): Seasonal Plot of National CPI

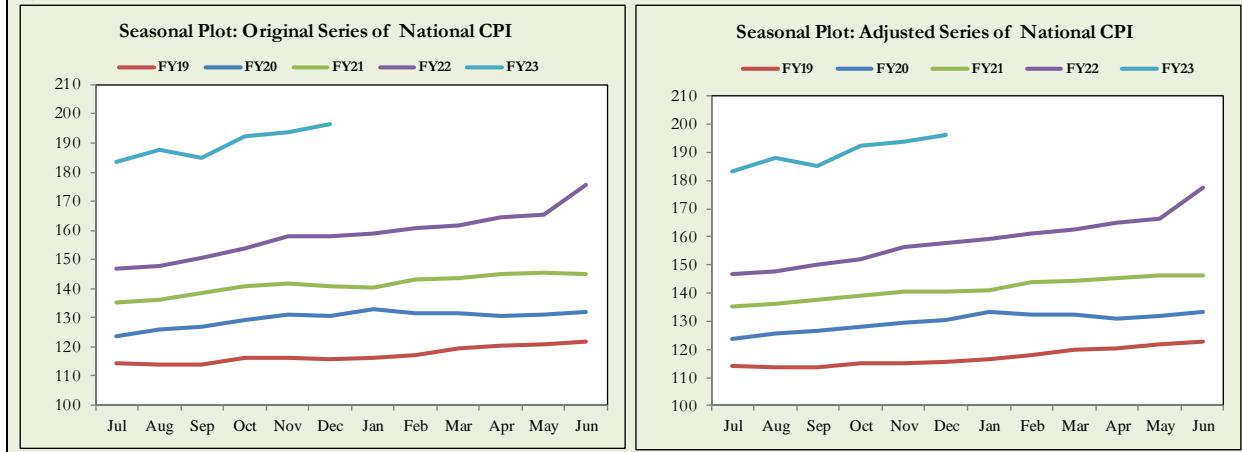

Fig. 12.2 (b): Seasonal Plot of Urban CPI

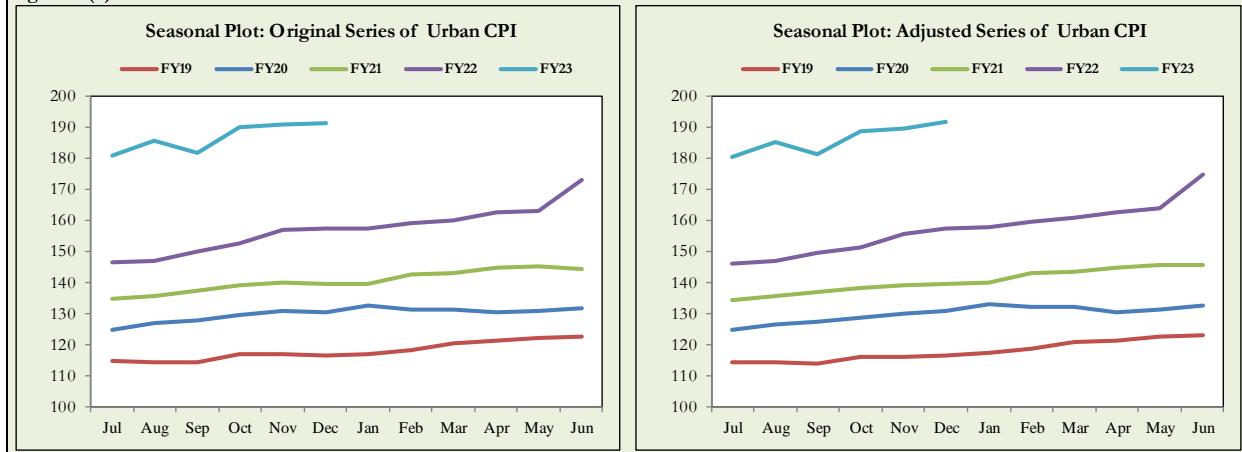

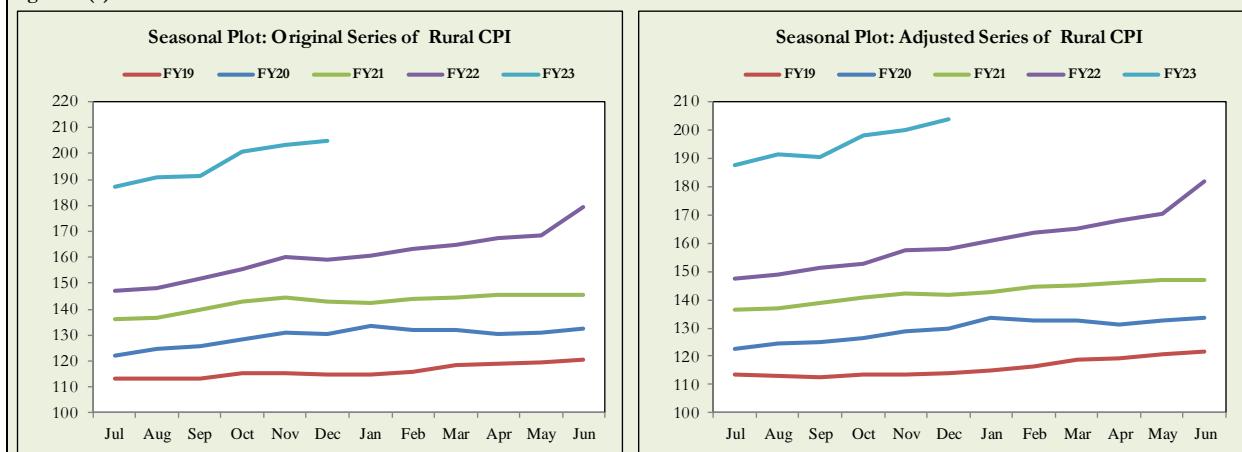

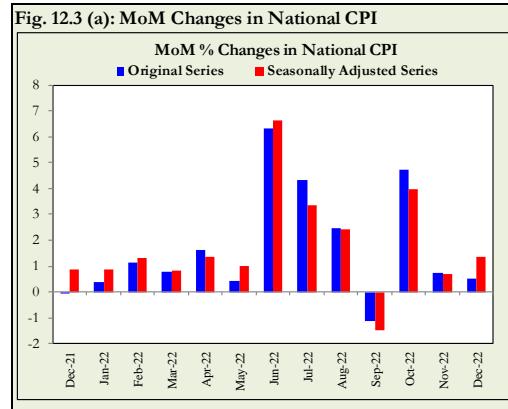

Fig. 12.2 (c): Seasonal Plot of Rural CPI

Seasonally adjusted Index of National CPI for December 2022 stood at 196.31 against 196.86 in original series showing a decrease of 0.55 because of seasonal adjustment.

Seasonally adjusted Index of Urban CPI for December 2022 stood at 191.50 against 191.46 in original series showing an increase of 0.04 on account of seasonal adjustment.

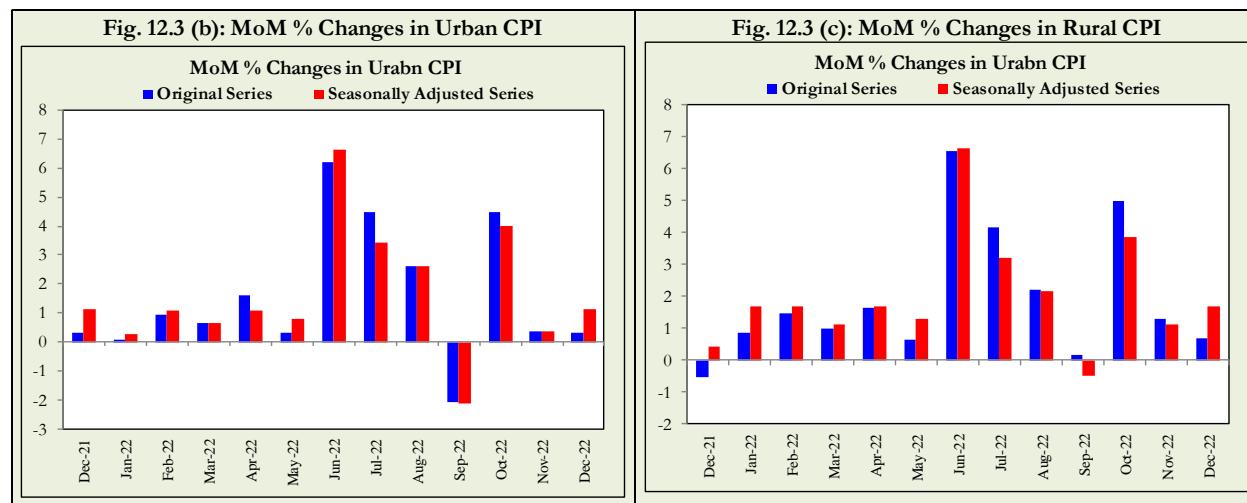

Seasonally adjusted Index of Rural CPI for December 2022 stood at 203.58 against 205.00 in original series showing a decrease of 1.42 on account of seasonal adjustment.

Month-on-month change of seasonally adjusted National CPI series showed an inflation of 1.36% during December 2022 over previous month against an inflation of 0.49% in original series.

Month-on-month change of seasonally adjusted Urban CPI series showed an inflation of 1.13% during December 2022 over previous month against an inflation of 0.35% in original series.

Month-on-month change of seasonally adjusted Rural CPI series showed an inflation of 1.69% during December 2022 over previous month against an inflation of 0.70% in original series.

Technical Notes

1. All the three measures of inflation, viz. CPI (National, Urban and Rural), WPI and SPI are computed by the following Laspeyres Index formula:

$$I_t = \sum_j w_0^j \left(\frac{P_t^j}{P_0^j} \right)$$

Where I_t is price index, w_0^j is weight of commodity j in the overall basket, P_t^j is price of commodity j in period t and P_0^j is its price in the base year.

2. Base year for all the indices is the year 2015-16.
3. CPI baskets for urban and rural areas contains 356 and 244 consumers' items respectively; WPI basket contains 419 items; SPI contains 51 items.
4. YoY inflation is the percent change of an index in a given month over the index in the same month of the last year. It is computed as follows:

$$\pi_t = \left(\frac{I_t}{I_{t-12}} - 1 \right) \times 100$$

5. Period average inflation is the percent change of the average index during the period from December to the given month of a fiscal year over the average index during the corresponding period of the last year. It is computed as follows:

$$\bar{\pi}_t = \left(\frac{\sum_{i=0}^{t-v} I_{t-i}}{\sum_{i=0}^{t-12-v} I_{t-12-i}} - 1 \right) \times 100$$

Where v is the serial number of the month of December of current fiscal year in a given time series.

6. Monthly inflation is the percent change of an index in a given month over the index in the preceding month. It is computed as follows:

$$\pi_t = \left(\frac{I_t}{I_{t-1}} - 1 \right) \times 100$$

7. 12-month moving average inflation (Long-run trend inflation) is the percent change of 12-month moving average of a price index; it is computed as follows:

$$\tilde{\pi}_t = \left(\frac{\sum_{i=0}^{11} I_{t-i}}{\sum_{i=0}^{11} I_{t-12-i}} - 1 \right) \times 100$$

8. Core Inflation is defined as the persistent component of measured inflation that excludes volatile and controlled prices. It reflects the normal supply and demand conditions in the economy. Core inflation is computed by the following two methods i.e. NFNE inflation and trimmed inflation:

- a) Non-food, Non-energy inflation (NFNE inflation); it is computed by excluding food group and energy items (kerosene oil, petrol, diesel, CNG, electricity and natural gas) from the CPI basket.

- b) 20% trimmed-mean inflation; it is computed through the following steps:
- i. All CPI items are arranged in ascending order according to YoY/12-month moving average/monthly/period average changes in their price indices in a given month.
 - ii. 20 percent of the items showing extreme changes are excluded with 10 percent of the items at the top of the list (corresponding to cumulative weight of 90% or more) and 10 percent of the items at the bottom of the list (corresponding to cumulative weight of 10 percent or less).
 - iii. The weighted mean of the changes in price indices of the rest of the items is core inflation.
9. Weighted contribution of different items (or sub-groups) to total inflation is worked out as below:
Let the overall index (I_t) is the weighted average of price indices of individual items or sub-groups (I_{it}), i.e.

$$I_t = \sum_i w_i \cdot I_{it}$$

The weighted contribution of a single item (or a sub-group) to overall inflation is defined as below:

$$C_{it} = \alpha_{it-12} \cdot w_i \cdot \left(\frac{\pi_{it}}{\pi_t} \right)$$

Where C_{it} : Contribution of i^{th} item to the overall inflation

$$\alpha_{it-12} = \frac{I_{it-12}}{I_{t-12}} ; \text{ i.e. ratio of item's index to overall index in the}$$

reference month

w_i : Weights of i^{th} item

π_{it} : Inflation of i^{th} item

π_t : Overall inflation

Methodology for Estimating Inflation Diffusion Index for Pakistan

We constructed an index to measure the spread of inflation in the 356 and 244 items of CPI urban and rural baskets respectively. It is based on month-on-month (MoM) change in the prices of these items and can be obtained by estimating what is known as an ‘inflation diffusion index’ (IDI) as below:

$$IDI = \frac{\text{No. of items with positive MoM change in price} - \text{No. of items with negative MoM change in price}}{\text{No. of items for which prices are reported}} * 100$$

Thus, it is the difference between the share of items with increasing prices (i.e. depicting inflation) and the share of items with falling prices (i.e. depicting deflation) in CPI amongst the items for which prices have altered or remained constant².

Based upon item level prices data from December 2001 to Jun 2011, inflation diffusion indices for overall (general) CPI basket and for all groups in CPI basket (except House Rent Index being single item) were computed. A simple analysis³ suggests that IDI was a leading indicator for Pakistan’s YoY inflation.

² Prices of certain items (like the seasonal items) during certain period may not be observed/available. To calculate the inflation diffusion index, the items for which prices have been reported (irrespective of changed or not) during the month under review are considered.

³ Formal test shows one way ‘Granger’ causality from IDI to YoY inflation.
