## 2. CPI Inflation Heat Maps

Heat map is a data visualization technique that represents the magnitude of individual values against benchmark values. A heat map for National, Urban and Rural CPI inflation (YoY and MoM) and their important sub-indices for the last thirteen months is presented here. The observed inflation is compared with inflation target of 21.0 percent for FY24<sup>1</sup>.

## 6. Consumer Price Indices and Inflation

Monthly CPI, Inflation (YoY) and seasonally adjusted CPI (MoM) are summarized in the following graphs (**Figure 6.1 to 6.3**).

## 7. Weighted Contribution

In overall Urban CPI Inflation, the weighted contribution of:

- Food group decreased to 47.1 percent during October 2023 from 47.3 percent in previous month. It was 54.3 percent during the corresponding month of last year.
- Non-food group increased to 52.9 percent in October 2023 from 52.7 percent in previous month. It was 45.7 percent during the corresponding month of last year (**Table 7.1**).

## 8. Inflation Diffusion Index

Inflation Diffusion Index (IDI) is the difference between the share of items with increasing prices (i.e. depicting MoM inflation) and falling prices (i.e. depicting MoM deflation) in CPI basket. IDI for Urban and Rural CPI baskets is presented in **Table 8.1 (a & b)**.

## 12. Seasonal Adjustment in CPI

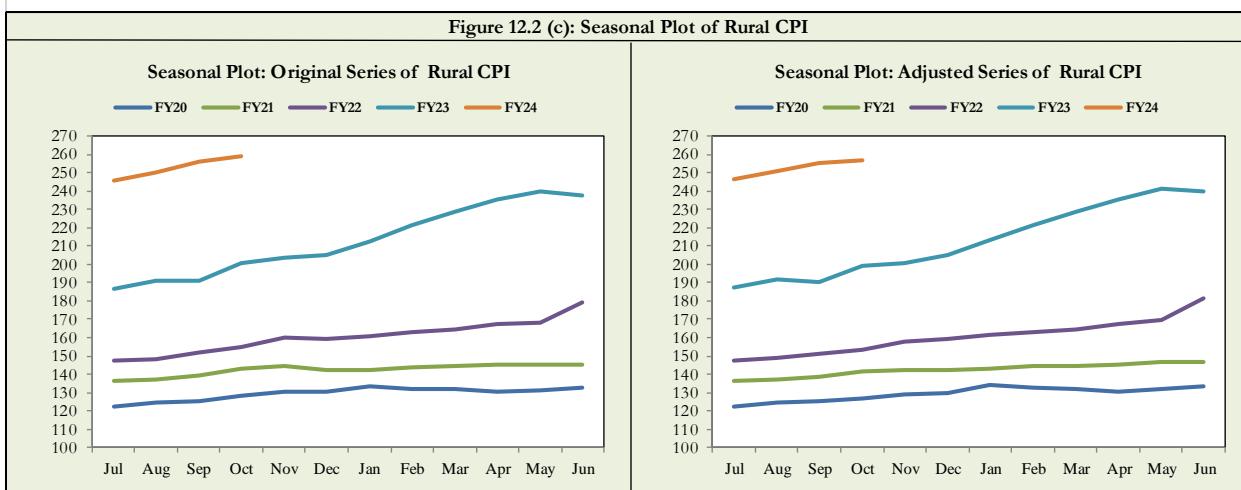

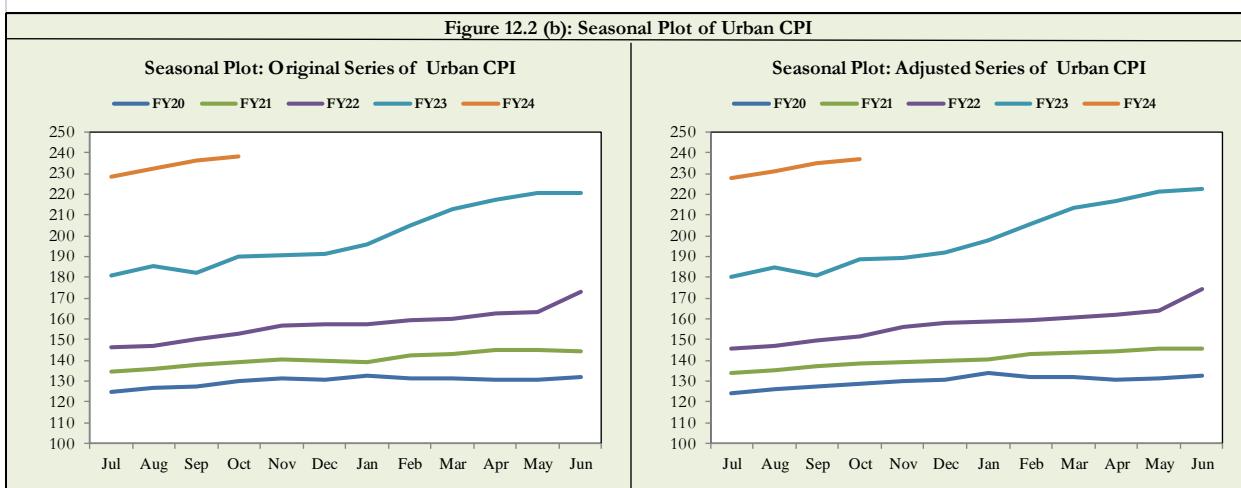

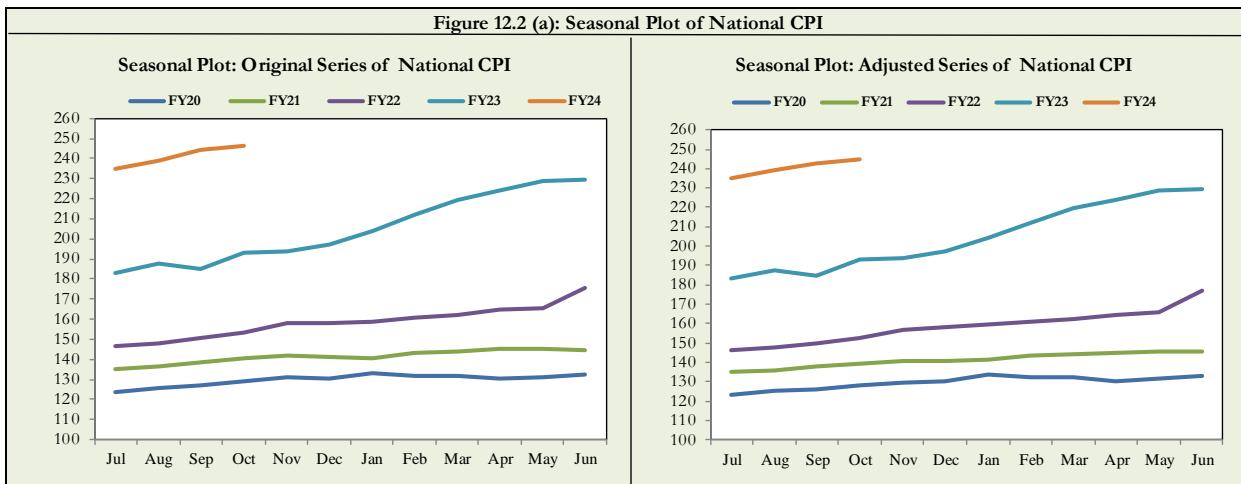

Seasonal adjustment is the process of removing seasonality effects in a time series data through decomposing it into seasonal, trend, cycle and irregular components. The purpose is to get clear picture of price movements. Various statistical methods are available to decompose a time series into its constituent components. The State Bank of Pakistan uses X-12-ARIMA Seasonal Adjustment Method for this purpose.

The changes in consumer prices are normally reported in terms of YoY and MoM basis. Seasonal adjustment is particularly useful for analyzing MoM changes. The monthly data series of CPI from July 2008 to October 2023 has been used for this analysis.

**Figures 12.1(a to c)** show that the seasonality in all CPI series has been increasing over the period. Average seasonal factors reveal strong seasonality during the calendar year. There is an upward seasonality during Jul-Dec while downward seasonality in the remaining months.

**Figure 12.1 (a): Seasonal Factor of National CPI****Figure 12.1 (b): Seasonal Factor of Urban CPI****Figure 12.1 (c): Seasonal Factor of Rural CPI**

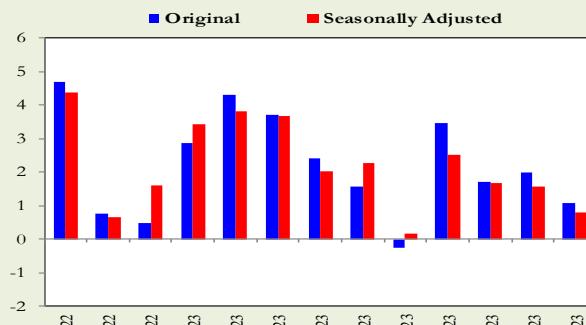

**Figures 12.2(a to c)** show seasonally adjusted series. The trend follows the long-term movement in original series.

### Seasonally adjusted Index of

- National CPI for October 2023 stood at 244.72 against 246.69 in original series showing a decrease of 1.97.
- Urban CPI for October 2023 stood at 236.81 against 238.51 in original series showing a decrease of 1.70.
- Rural CPI for October 2023 stood at 256.65 against 259.03 in original series showing a decrease of 2.38.

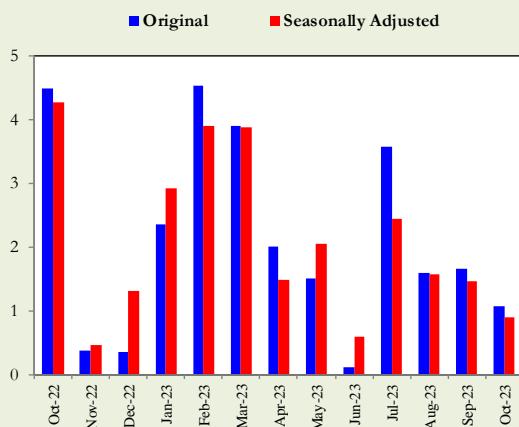

**Figure 12.3 (a): MoM Changes in National CPI**

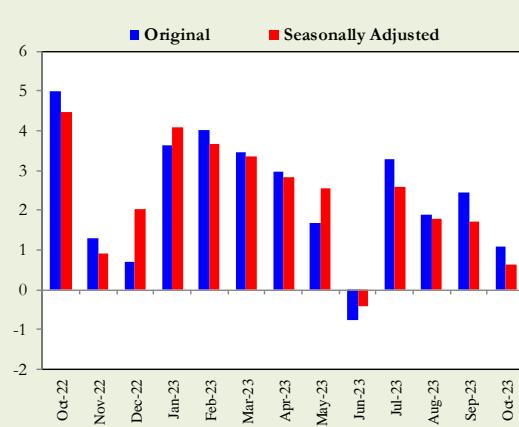

### Month-on-month change of seasonally adjusted

- National CPI series showed an inflation of 0.78 percent during October 2023 over previous month against an inflation of 1.57 percent in original series.
- Urban CPI series showed an inflation of 0.90 percent during October 2023 over previous month against an inflation of 1.47 percent in original series.
- Rural CPI series showed an inflation of 0.62 percent during October 2023 over previous month against an inflation of 1.72 percent in original series.

## Technical Notes

1. All the three measures of inflation, viz. CPI (National, Urban and Rural), WPI and SPI are computed by the following Laspeyres Index formula:

$$I_t = \sum_j w_0^j \left( \frac{P_t^j}{P_0^j} \right)$$

Where  $I_t$  is price index,  $w_0^j$  is weight of commodity  $j$  in the overall basket,  $P_t^j$  is price of commodity  $j$  in period  $t$  and  $P_0^j$  is its price in the base year.

2. Base year for all the indices is the year 2015-16.
3. CPI baskets for urban and rural areas contains 356 and 244 consumers' items respectively; WPI basket contains 419 items; SPI contains 51 items.
4. YoY inflation is the percent change of an index in a given month over the index in the same month of the last year. It is computed as follows:

$$\pi_t = \left( \frac{I_t}{I_{t-12}} - 1 \right) \times 100$$

5. Period average inflation is the percent change of the average index during the period from December to the given month of a fiscal year over the average index during the corresponding period of the last year. It is computed as follows:

$$\bar{\pi}_t = \left( \frac{\sum_{i=0}^{t-v} I_{t-i}}{\sum_{i=0}^{t-12-v} I_{t-12-i}} - 1 \right) \times 100$$

Where  $v$  is the serial number of the month of December of current fiscal year in a given time series.

6. Monthly inflation is the percent change of an index in a given month over the index in the preceding month. It is computed as follows:

$$\pi_t = \left( \frac{I_t}{I_{t-1}} - 1 \right) \times 100$$

7. 12-month moving average inflation (Long-run trend inflation) is the percent change of 12-month moving average of a price index; it is computed as follows:

$$\tilde{\pi}_t = \left( \frac{\sum_{i=0}^{11} I_{t-i}}{\sum_{i=0}^{11} I_{t-12-i}} - 1 \right) \times 100$$

8. Core Inflation is defined as the persistent component of measured inflation that excludes volatile and controlled prices. It reflects the normal supply and demand conditions in the economy. Core inflation is computed by the following two methods i.e. NFNE inflation and trimmed inflation:

- a) Non-food, Non-energy inflation (NFNE inflation); it is computed by excluding food group and energy items (kerosene oil, petrol, diesel, CNG, electricity and natural gas) from the CPI basket.
  - b) 20% trimmed-mean inflation; it is computed through the following steps:
    - i. All CPI items are arranged in ascending order according to YoY/12-month moving average/monthly/period average changes in their price indices in a given month.
    - ii. 20 percent of the items showing extreme changes are excluded with 10 percent of the items at the top of the list (corresponding to cumulative weight of 90% or more) and 10 percent of the items at the bottom of the list (corresponding to cumulative weight of 10 percent or less).
    - iii. The weighted mean of the changes in price indices of the rest of the items is core inflation.
9. Weighted contribution of different items (or sub-groups) to total inflation is worked out as below:  
Let the overall index ( $I_t$ ) is the weighted average of price indices of individual items or sub-groups ( $I_{it}$ ), i.e.

$$I_t = \sum_i w_i \cdot I_{it}$$

The weighted contribution of a single item (or a sub-group) to overall inflation is defined as below:

$$C_{it} = \alpha_{it-12} \cdot w_i \cdot \left( \frac{\pi_{it}}{\pi_t} \right)$$

Where  $C_{it}$  : Contribution of  $i^{\text{th}}$  item to the overall inflation

$$\alpha_{it-12} = \frac{I_{it-12}}{I_{t-12}} ; \text{i.e. ratio of item's index to overall index in the}$$

reference month

$w_i$ : Weights of  $i^{\text{th}}$  item

$\pi_{it}$  : Inflation of  $i^{\text{th}}$  item

$\pi_t$  : Overall inflation

## Methodology for Estimating Inflation Diffusion Index for Pakistan

We constructed an index to measure the spread of inflation in the 356 and 244 items of CPI urban and rural baskets respectively. It is based on month-on-month (MoM) change in the prices of these items and can be obtained by estimating what is known as an ‘inflation diffusion index’ (IDI) as below:

$$IDI = \frac{\text{No. of items with positive MoM change in price} - \text{No. of items with negative MoM change in price}}{\text{No. of items for which prices are reported}} * 100$$

Thus, it is the difference between the share of items with increasing prices (i.e. depicting inflation) and the share of items with falling prices (i.e. depicting deflation) in CPI amongst the items for which prices have altered or remained constant<sup>2</sup>.

---

<sup>2</sup> Prices of certain items (like the seasonal items) during certain period may not be observed/available. To calculate the inflation diffusion index, the items for which prices have been reported (irrespective of changed or not) during the month under review are considered.
